the Yaesu FT-50R that arent in the manual. (Surprise, surprise)..
TO my dismay, that section of the webpage wasnt completed.
Does anyone know where I can find this information out?

Source record: 176731

The Palo Alto Amateur Radio Association (PAARA) is looking for a sturdy, aluminum tower which is about 60 ft. tall. This tower will be used for Field Day and other club activities.

If you have one for sale, or are willing to donate it to the club, please, contact our property manager, Fred Canham (K6YT) at 415-948-9238.

If the tower has to be taken down, club members can take care of that. Thanks for reading this.

2242. Need Help for Selsing (or Selsyn)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: Alessandro Bondoli <bondoli&campese@sira.it>
Message-ID: <01bc53c7$f4d30a40$LocalHost@sbondoli.sira.it>
Source record: 176742

Hi, my call is IW4CFE.
I need help: I have a couple of Selsing (or Selsyn) devices 1-phase, 90 V, 400 Hz.
Because I work on microwave bands I need an high-precision antenna directioning but as soon as today I've not found a reliable system to have the lowest error possible in positioning my antenna system.
I've been interested about the characteristics of the Selsing engines, so I've tried to use the above mentioned devices to use them for my purpose: the result is that I can use them at 30 Volts 50 Hz with very low torque: the big problem now is that the indication is not repeatitive.
I think that if I will able to feed the Selsing with 90 Volts at 400 Hz I'll remove all the problems I've now.
Does anybody has an electric-schematic of a power supply that can generate 90 V at 400 Hz ?
Please note that the second-hand devices you can find on commerce are too much expensive: they cost at least from 10 to 20 times the value of the Selsing !
thanks in advance
Alessandro Bondoli, IW4CFE

** Please reply via direct Email - thanks! **

I can't help but wondering about hotel pay-TV systems. I've seen several varieties. One was very simple, consisting of a sharp notch filter (blocking the pay channels) that was shorted out after inserting a chipcard. The chipcard was read for billing when checking out. Nothing mysterious there. :-)

The other variety was more interesting. A unit inside the TV (yes, I did have a screwdriver with me) was connected to the band selection lines of the tuner. As soon as the upper UHF band was selected and the tuning voltage exceeded a certain treshold level, billing would start. (The pay channels were all located in the 'high' parts of the UHF band.)

So far so good. But *how* does the TV signal to the central accounting system that the pay channels are selected? I could measure no DC voltage on the hotels central antenna outlet, so that's not how it's done. I can think of only two alternatives; one is a signal modulated on a carrier that is sent back to the central computer, and the other is a notch filter that is connected to the antenna input in the TV so that the input impedance drops for that frequency, which could be measured (with a griddipper-like circuit).

Could anyone tell me how these signalling systems really work? How does a hotel TV signal the central accounting system that pay channels are activated??

** Please reply via direct Email - thanks! **

2244. UT-101 Module for IC-2350H. What can it do?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: "Chad Johnston, KC8ADE" <webmaster@nuwaysupply.com>
Message-ID: <01bc53cc$1b5f5e80$594e99ce@chadj>
Source record: 176744

I currently own an Icom IC-2350H, and have it mounted in my Blazer. I run cross-band through it during the day and the evening. I'm looking to broaden the capability of my cross-band setup by installing the UT-101 DTMF decode module into the 2350H.

I know this will allow remote control of the 2350H from my HT (an Icom IC-Z1A), however, I don't know to what degree I'll be able to control the 2350. If anyone currently uses a setup like this with the 2350, I'd appreciate knowing what you're actually able to do once the UT-101 is installed.

Can I, for instance:

1. Enable and disable cross-band repeat remotely from my handheld?
2. Change both the VHF and UHF via the HT?
3. Change output power settings for the VHF and UHF bands?

Right now, I currently have the 2350 set to cross-band between a simplex UHF frequency and the local repeater's input frequency. This minimizes the TX time of my mobile ('cause I don't have the $88 UT-89 decode module installed in the mobile). I would, however, like to leave the mobile ON, but NOT in cross-band repeat mode, and only enable it when I need to use it (see #1 above). Also, I'd like to be able to choose WHICH local repeater I'm cross-banding with so that I could change that from a remote location, rather than running down to my Blazer to fiddle with the mobile (see #2 above).

Enough babbling. I think everyone gets the drift...

Please email me with any responses, in addition to any posts made here on the newsgroups! Thanks, in advance, for any insight you may be able to lend!

73,

Chad, KC8ADE

2247. Re: FT-50 .rdf file mods

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: Ingra-Beton@t-online.de
Message-ID: <5k23uo$ss9$1@news00.btx.dtag.de>
Source record: 176747

Here is the description you need.
Yes it works.

Indi.

FT50R - Software Modifications
Ingra-Beton@t-online.de, Date: 31.03.97
==========
This is modification of the first version, with same fix up's, typing
error corrections and better explanations (one Example too).

The Problem:

I have purchased a FT50R a couple of days ago and tried to make the MOD's
as described by Bill Childers (KE6VVW).

The removal of the solder jumper Nr.1 worked just fine and the
MARS/CAP was there. But as I tried to make the Trick to pull the
adapter cable out of the radio, ..., that don't work.

RT Systems says:
> The firmware inside the radio has been changed so that pulling the plug
> will not toggle the radio into a European mode. This change was made in
> radios with the 3rd and 4th digits of the serial number greater the 05.
> --
> Rod, RT Systems Amateur Radio Supply, Huntsville AL.
> Sales 1-800-723-6922, Tech 1-205-880-3093

So I had to find something else, here it is.

This is a method to do any MOD to your FT50R. The procedure is very simple
and fast done:

1. You make a template from your FT50R
2. Change 3 Bytes in the template
3. Upload the template to your FT50R

So you can switch to any BAND, you don't have do hardware interventions
or similar staff like pull the adapter cable out, remove jumpers, ...

If you want do return the FT50R to its original state, just upload the
old (unmodified) .TPL to the Unit.

Information and explanations:

All MOD's can be made by software only. To do the MOD's you need the
ADMS 1C Software (I am using the 1.05 Version) and a HEX editor to
manipulate the .TPL file (I am working with .TPL file's only)

I am using HIEW 5.24 (Hacker's View) but any HEX editor will do the
job (PCT, Norton, Multiedit, ...)

Everyone has noticed the problem after making same MOD's to the Unit
that the old .TPL files can not be uploaded to the Unit any more.
There is a simple protection scheme (2 bytes) that prevents uploading
a .TPL file from a different hardware configuration to the Unit.

This is a description how to bypass this protection. By uploading a
.TPL file with different hardware configuration, (from a other Unit
or just to change the 2 bytes) the Unit will be assigned to this new
configuration.

First a description of Terms and Positions:

1. Current_Byte
.....
This is the Byte that tells the current Status (Hardware configuration) of
the Rig, you can get this Byte as follows:
- Make a .TPL file from the Rig.(Menu: <Radio> <Create template>)
- Edit the .TPL File with e HEX Editor.
v this is the first byte*
- On the File Address 05E2 is the sequence 07 XX
^ Current_Byte (Addr.:05E3)
- The Current_byte can be in the Range from 00 to 06.
- *the first byte is usually 07, by experimenting with nonstandard Numbers
you can change this byte also. (03 or same other value, but very rare)

2. Key_Byte (Security Key)
.....
The Key_Byte is at the same place as the Current_Byte, but in the .TPL
file you intend to upload.
If you want to upload a .TPL File to the Rig, the Key_Byte must match the
Current_Byte (that means that the Hardware configuration of the Unit and
the .TPL file you intend to upload must be the same). Just change with the
HEX Editor the Key_Byte of the .TPL file you intend to upload to be the
Current_Byte and you can upload anything (any .TPL file) to the Rig.
!!! No more CERR Messages !!!
(As mentioned in 1. if you change the first byte, you have to change this)
(byte also (in the .TPL File you intend to upload) to be the same Byte as)
(in the Template you have just made to read the Current_Byte.)

3. Band-Set_Byte
.....
- Edit the .TPL file you intend to upload with e HEX Editor
v* v Sub_Band-Set_Byte (Addr.:0CE8)
- On Address 0CE6 is the Sequence 07 XX XX
^ Band-Set_Byte (Addr.:0CE7)
This Byte tells the Rig to switch to Band XX (XX is a Nr.between 00 and 06)☐
To change the Band simply change the Band-Set_Byte to the desired Number.
After Uploading the Modified .TPL File to the Rig, it switches to the
desired Band and the Current_Byte becomes the Band-Set_Byte. That means if

you want to upload later something else to the Rig, you have to change in
the .TPL File you intend to upload the Key_Byte to the new Current_Byte
(with the HEX Editor).
The Sub_Band-Set_Byte tells the Rig in with Sub Band to switch (see Table)
*The byte (0CE6) is usually 07, rare 03 or same other number.
If it is not 07 (If your unit is new, it will be 03) Set it to be 07

```
Example
.......
Now, to do a band change do as follows:
- let's assume you have BAND_A1 (USA) and want to switch to BAND_F3
- make a .TPL file from your unit (let's assume original.tpl)
- copy the original.tpl to mod1.tpl (this file we are going to upload)
- read the Current_Byte from original.tpl (as described in 1)
(for the BAND_A1 we assumed you have it will be 01))
- set the Key_Byte in mod1.tpl to be the Current_Byte (01) (as described
in 2). It is logical that the Key_Byte will already be 01, you've just
made the copy, but it is a matter of principle, keep reading.
- If the first byte in mod1.tpl (0CE6) s not 07, set it to be 07.
- set the Band-Set_Byte in the mod1.tpl to 00 (for the BAND_F)
- set the Sub_Band-Set_Byte in the mod1.tpl to 03 (for the Sub BAND F3)
- upload the mod1.tpl to the unit.
- power off, power on, now you have BAND_F3, DONE.
```

- let's assume you want to switch now to BAND_B2a
- make a .TPL file from you unit (let's assume temp.tpl)
- read the Current_Byte from temp.tpl, it will be 00. (BAND_F)
- copy the original.tpl to mod2.tpl
- set the Key_Byte in the mod2.tpl to be the Current_Byte (00)
- set the Band-Set_Byte in the mod2.tpl to 02 (BAND_B)
- set the Sub_Band-Set_Byte in the mod2.tpl to 01 (Sub BAND B2a)
- upload the mod2.tpl to the unit.□
- power off, power on, now you have BAND_B2a, DONE.

```
and so on ...

Here are the MOD's (Band's) available:
--------------------------------------

I 00 01 02 03 I <- Sub_Band-Set_Byte (Address 0CE8)
--------------------------
00 I F1 F2a F2b F3 I
01 I A1 A2a A2b A3 I
02 I B1 B2a B2b B3 I
03 I C1 C2a C2b C3 I
04 I D1 D2a D2b D3 I

06 I FrEE FrEE FrEE FrEE I
--------------------------
^ Band-Set_Byte (Address 0CE7)
```

When you set the Rig in a band (with the Band-Set_Byte) then you can switch
from Sub Band X1 to X3 (if solder jumper 1 removed) with the key sequence:
- Hold Lamp and Knob by powering_on to switch to X3 Subband
- Hold Lamp and Knob by powering_on (you will see ALRST prS5) and then
press the function key to switch to X1 Subband

The TX for the X3 Bands is:

BAND SUB_Band TX
F 3 120-222 320-500
A 3 140-174 420-470
B 3 140-174 420-470
C 3 140-174 420-470
D 3 144-146 432-438
H 3 144-148 430-450
FrEE 50-300 300-540*

*It will TX from aprox. 118-233 and 312-508
RX from aprox.71-540 and 590-999 depending from the Unit.

The Sub Bands 1,2a and 2b are with restriction variations in TX and RX and
I am to tiered to examine them closely and write them down. I guess that
they are not very interesting.

ARS lost - effect

The FT50R has e BAND_PLAN like database and depending for witch country
your unit is configured (A,B,C,D & H) it is using the repeater database□
from his Memory for that country.

It is understandable that for the BAND_FrEE and BAND_F (TX:120-221&320-499)
there is no data in the database because those band's are not for any
specific country. That is why the ARS does not work any more, and not□
same mess up (magic) in the memory of the unit.

That does not mean that it is not possible to enter additional data to
the ARS memory database (I am working on it).

If you want to use the ARS again you just have to switch it into any
ordinary country BAND_X and it will work again.

Original .TPL file

If you don't have a original .TPL file, you can make (improvise) one:
1. Start the ADMS 1C software
2. Goto the File Menu and save a .RDF file as original.rdf
(don't download anything from the Unit, don't use a template)
3. Change with a HEX editor the first 3 bytes from RDF to TPL
(If you are using ADMS 1C 1.05)
4. Set the Key_Byte in this file to be the Current_Byte of your Unit
5. Rename the original.rdf to original.tpl
6. Start the ADMS 1C and upload the original.tpl to the Unit.

This will switch your unit to BAND A1 (USA), ARS will work again !

Disclaimer:

Don't TX and RX at frequencies that you are not allowed to!
I do not guarantee the validity of this information,
as Yaesu may change programming or hardware so that some of the
techniques in this document may cease to function. I am not
responsible if these instructions damage your rig in some way. All
I can say is that I have performed the following procedures to my
unit, and I am quite pleased with the results. Your mileage may
vary, etc.

I had a 1985 CJ 7 and a 1991 Wrangler.
I used a L-shapped bracket by Larsen (cant remember the part number)
its made to slip between the trunk lid and the fender. It has a 3/4"
hole on the top and three sheetmetal screwes on the side.

I placed them above each tail light assbly. Used them for 440, 2
meters, and VHF (155) without any problems.

Let me know if you have any questions.

Oh god,
I never thought that my original posting would start you guy's off, I'm

used to all this and have a good laugh on the cb ng.
I must admit that I would not of thought that anything 2m would have the necessary 5nf or 10nf trimmers inside so did'nt bother looking.
I do like the sense of humour in teaching the population of this ng the difference between nf & pf!
Seems anyway that I'm going to have to pad out the largest trimmer that I've found (3500pf), with some fixed caps.
I must look into this ng more often, I enjoy this kind of humour,

YOW!!!

>I think the microphone connector on the
>PSU/modulator unit was also a Belling Lee coaxial type. Perhaps
>Labgear had shares in Belling Lee!

Well, I worked for Labgear at one time, and one of their main
businesses was the manufacture of TV accesssories - pre-amplifiers,
pattern generators etc. They also made nice SSB military xcvrs
with a 10.7 MHz i.f.! Backpack jobs that were solid state and ran
about 10 watts best I remember.

No doubt they had plenty of Belling-Lee co-ax connectors for all the
TV stuff.

>Other suggestions connecting my HT to the TNC?

Yaesu sells an adapter from the 4-conductor plug on the side of the radio to standard separate speaker and mike jacks. You should be able to use standard 3.5 mm and 2.5 mm plugs at that point - same as you would used for most transceivers.

I have both a WE and RE 75S-3C, and have decided to sell the WE, serial
#10478, which has 3 filters, and is in excellent physical and
operational condition. It looks virtually new both inside and out. I
was going to bring it to Dayton, but decided to list it here on several
of the ham radio news groups. This radio is exceptional, and I will
sell it for the best offer over $1,750 plus shipping. This radio is as
close to "mint" as you can get without taking it out of the box when
new. I also have a "like new" 312B-4 WE to match this 75S-3C. If you
have sincere interest in buying this classic Collins receiver, email
me. If you send your phone number, I'll call you back to answer any
questions you may have. JB, K4JJ in Roswell, Georgia

2260. FT50 - Earphone for $1

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-28 00:00:00 UTC
From: Kenneth M Gianino <ken@notify1.com>
Message-ID: <336502BF.336D@notify1.com>
Source record: 176760

If you are good at building things, you can make an earphone for a Yaesu FT-10/40/50 for a little more than a buck.

The first step is to find an "Everything's a Dollar" (or equivalent) store that has earbuds for personal stereos (you can start with better materials if you are brave!). The 1/8" stereo plug must have a small flange that will allow it to plug all the way into the radio's audio jack. The Yaesu radios have a small depression around the jack that will not allow the use of the larger flange plugs that are sold at Radio Shack.

Use a Dremel Moto-Tool with an abrasive cut-off disc to cut the plug sleeve into two equal sections. Be very careful to cut away only the metal and not the underlying insulator. Smooth the cut with a miniature file and fillet with epoxy. When cured, carefully file the epoxy smooth. One earbud will be connected from tip to sleeve and that's the one you want to keep. The other earbud is connected from ring-1 to sleeve (clone connection) and should be cut off. Make sure the wires don't short. The new ring-2 connects to the mic, but unfortunately cannot be used.

I just thought I'd post this for anyone interested. Please direct any comments to this newsgroup. Finally, if you don't think you can do this correctly, don't plug it into your expensive radio. You can screw up the radio's audio jack and that would be a bad thing.

Ken - WB0QNA

Thanks for the note, Gary. Actually, that's perfect for me since I
have no use for the FM portion of that band. This should make it cheaper
to buy as well, right? But they seem to be scarce as hen's teeth. Only
an IC-351 (220 Mhz) could be more rare, I guess.

I noticed that the next generation IC-471H showed up on news:rec.radio.swap
High power version too. $550 firm + shipping. Ouch! Ouch! Ouch!
I'll hold out for the IC-451 despite the competition ;-)

I have a rare IC-201 early analog 2 meter rig, 144-146 Mhz. SSB,CW,FM.
Ever seen one? Has a keen orange and green concentric, two-speed dial.
I also have the blueprint schematic for clues to the 100 or so adjustments
inside of it.

2271. ft-50r battery problem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-29 00:00:00 UTC
From: p22980@email.mot.com
Message-ID: <862361357.27797@dejanews.com>
Source record: 176520

I have had my ft-50r for about 3 months, and suddenly it started having the following problem. Has anybody had this problem?

When I charge my battery, it discharges overnight while connected to the unit, with the unit turned off. When not connected to the unit, it does not discharge. I tried taking the battery off and connecting the unit to a 9.6V power supply at the battery connectors, through an ammeter. With the unit off, it draws a little over 4 mA!

I use an external 12V regulated power supply through the dc port. I can't see how this could hurt the unit, since it is spec'ed to perform at that level. Any way, I'm sending it back to Yaesu.

Has anybody else had this problem?

I second this. I've had my 202 for over 2 years now and it's a VERY solid
HT. It's been dropped several times (by accident of coarse) onto pavement and
the rig just laughs it off. I'll take this "brick" over those tiny rigs ANY
day. Highly recommended.

Hi, well I don't find that my European FT8500 suffers from the long
squelch tail, the change is quite abrupt. No problems with the between
transmission squelch either.

I do agree about the sub-band mute though, the FT51 is much better
implemented. I've never understood why radios need to beep when coming
in and out of scan, isn't it obvious when you hear the transmission?

One problem I have found is when trying to use the rear data socket, I
cannot get my Tiny 2 to keep the radio keyed for more than about a
second. I've tried another tiny 2 which was just the same and manually
earthing the ptt line stays on...

TG, I'm amazed at the posts that I've seen where some guy gets a new Blazer, Bronco, CUCV, HUMV, or whatever, and cannot drill a hole in the damn thing. Do you remember Marlin Perkins riding in the Leyland Land Rover and the big ole rhino putting a gash in it? Today, well kept house wifes are driving Land Rovers to McDonalds to pick up happy meals for the t-ball team.
Get a drill and put a good stainless steel ball mount on the left rear side panel. Use any good antenna with a 3/8" x 24 thread.
Don't sweat your resale value, a jeep wrangler without a ball mount, well... you've got to wonder who owned it.

2293. Paddle for Electronic Keyer

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-29 00:00:00 UTC
From: Vince- ex: WV2RSX <WA2RSX@worldnet.att.net>;
Message-ID: <3365DDAC.28B8@worldnet.att.net>
Source record: 176621

Recent addition to my station equipment is a Yaesu FT1000/d. I would consider buying a paddle to trigger the internal electronic keying circuit, but have little knowledge of what paddles are available.

I would like to hear a description of the differences between an iambic paddle, a squeeze paddle, and a paddle that is set up similiar to a Bug.

I have been using a Vibroplex Bug for many years. Which type of paddle would be easiest for me to learn after using a Bug for so long ?

What are typical prices for New/Used paddles of each type?

What are the names/websites of present-day manufacturers of keyer paddles ? I think they are Vibroplex and NYE. Any others of decent quality?

I have a spare Vibroplex Bug here; has anyone converted one for use as a keyer paddle?

Any opinions about the internal keying circuit of the FT1000/d ?

2295. Need help for Selsyn (Selsing ?)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-29 00:00:00 UTC
From: Alessandro Bondoli <bondoli&campese@sira.it>
Message-ID: <01bc546a$282f8240$20c4b8c2@sbondoli.sira.it>
Source record: 176623

I need help to find the way to feed a couple of synchro
transmitter-receiver called Selsyn (or Selsing, I don't know).
Because I operate on microwaves bands, I need a high-precision indication
of where the antenna system is directed to.
Selsyn seems the best (and cheapest) way to do this, but the problem I have
is that those devices were made for military apparatus as they run with 90
Volts and 400 Hz: this data is printed on the outer jacket.
I've tried to feed them with 30 Volts at 50 Hz: the system seems
functioning but hasn't enough torque: the result is loss of precision and
worst of all no repeatitivity of the indication: in other words is
unusable. Arising the voltage results in hottening of the Selsyn and sure
in a burning of the device without improving torque.
Could someone help me to indicate the schematics or the project of a power
supply to produce the required voltage and frequency for my Selsyn or any
other way to use it ?

TNX in advance, IW4CFE.

I like the KENT and JONES keys... a little more expensive (OK, a LOT more expensive) than Bencher, but the feel and movement are excellent. I use my Kent iambic key with essentially ZERO gap, such that I need to only TOUCH the paddle to actuate it... and there's no arcing or accidental keying... really smooth. There is really no clicking or feel of any gap closure with the key.

The Jones is similar but more money... some of them are outright gorgeous keys with polished brass, but for the money the Kent (in kit form for less than 80 dollars I think) is a good deal. And since I have an opaque cover over my Kent to keep dust out, appearance is secondary any way.

If you want to go iambic at lowest dollar, get a couple of old J-38 straight keys and bolt them bottom-to-bottom through a metal plate, then bolt the plate to a chunk of steel. I did that in 1968 when I built my first iambic keyer (ten spider-type IC's and all I could do was iambic and dot injection!!! But it would handle the high keying voltage to my Heath Apache!!)

Of course, with J-38's being collectors items now, a prefabbed commercial key may be cheaper.

Help IC706 CW-R mode adjustment
****

I have some trouble (CW-R mode only) with my IC706.

With the CW (not -R) mode, I can listen very well LSB stations.

But with the CW-R mode, I listen USB stations very badly and very weak :
The audiofrequency is very deep. If I try to listen a clear carrier, I
get 2 listening frequencies.

So, my CW-R mode seems to be out of adjustment.

Can anyone give me the component I have to adjust ?
And where is it on the board ? (Which board ?)
I do not have the technical manual.

Thanks,

2306. FT-51 cross band repeat?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-29 00:00:00 UTC
From: cwm3@psu.edu
Message-ID: <cwm3.15.007CC050@psu.edu>
Source record: 176634

Hi FT-51 users and other interested and knowledgeable parties.

I recently acquired a Yaesu FT-51 and am acquainting myself with it features. I think I have most of it figured out but have been unable to make the cross band repeat function work as described in the manual.

Recalling all memories and using the upper and lower frquency limit memories for scanning band segments does not work as described in the manual but some playing around revealed the corrrect combination of keys to make them work. I'm guessing that the manual does not quite jive with the way the CPU is programmed and the same could be true of the cross band repeat function.

Anybody have any clues?

Jim:

Thanks for expressing your opinion and for the information.

Im not sure if iambic and squeeze keys are the same thing ? So far no one has described the differences.

But, I am also not convinced that I want to get a paddle of any kind hr. The fact that I now have a radio with internal keyer circuit is about the only motivation. For my max speed of approx 30wpm, I would use my computer keyboard for sending machine morse code. I hope that is not a sin ! Or, struggle to keep up with the Vibroplex Bug, which I bought in December 1961, and hopefully not tire out. I like to rag chew, and an hour of QSO is what I would prefer over a 25 min wx es rig report.

Thanks again.

73s/ciao/de Vince

First, I won't tell you the differences between the different keyers and paddles..you will get many replies to that question. I will tell you that I also use a Yaesu FT-1000, along with other rigs I have. However, I prefer an external keyer, and use the CMOS III and CMOS III units.

There are many keys available, and all have advantages and disadvantages. But, I can tell you that if you are used to a Vibroplex bug, you just can't beat the Vibroplex Vibrokeyer. It looks like a bug, and feels like one, except you don't make your own dots and dashes; the keyer does that. But the feel is just like your bug, so the transition is very easy. They also make an iambic key, which I found impossible to learn after so many years using a bug. But, on the other hand, many of my friends made the change with no trouble at all. I guess its up to the individual. These keys sell used for about 65 dollars, depending on condition, And new for around 130 dollars. The are usually availble on the newsgroups. I have three of them, and love them. I also have some other keys, but for me, an old Vibroplex bug user, they just don't have the feel I like.

These are just my own opinions. They are not necessarily right or wrong,
just right for me....and maybe you.

Best 73..

Jim

They are not the same but they are usually connected and used
together. The squeeze key is a hand operated unit with two switches
each operated by one of two horizonally opposing paddle arms. An
iambic keyer is an electronic device that is controlled by a squeeze
key. The term iambic describes how the keyer behaves when the key is
squeezed, i.e. when both switches are closed at the same time.

Hi, I want to buy some used 19" rack panels, perforated or solid.
Let me know what you have. Might also be able to use some rack
shelfs.

Thanks!

It is important to observe the frequency specification of these units. They
won't work properly at 50 Hz (as you've discovered). You need to feed them
400 Hz power. They also like a nice clean sinewave, so a crude inverter isn't
a good idea. Since you only need enough torque to move a pointer, you can
construct a power oscillator to operate these units at 90 VAC 400 Hz. A
standard audio oscillator circuit, such as a Wien Bridge circuit, will do fine.
Use an audio power transistor for the oscillator (a 2N3055 should work).

These units typically have three phase windings which generate error voltages
and cause one unit to follow the other. Winding inductance varies directly
with frequency. By running 50 cycle voltage , the impedence of the windings is
drastically reduced. You are probably avoiding a smoke test with the reduced
voltage. Also you are loosing the torque output.

> including one for an emerging wireless technology that could bring new
> competition to the local-telephone and cable-television businesses.This service was recently licenced to three Canada wide companies..Cellularvision, Regionalvision, and Maxlink (Digitalvision). The network is a cellular point to point system operating in the 28 Ghz range and is designed to provide bi-directional telecom, cable tv, videoconferencing, and internet/data services to homes and businesses. Each of the three companies in Canada has a licence for a 500Mhz band. As of today, two test "cell" sites are operating in the Metro Toronto area. The system is based on the NY City "Cellularvision" technology, which has been in use in NYC for a few years now to deliver wireless cable tv (MMDS) service. This does not, in any way, affect the ham bands.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

Hello Everyone,

I have for sale an Icom T7-A dualband handheld. It is five months old and is excelent condition. Comes with 3 watt battery, duck, charger, manual, and box. This unit will RX: 50-199, 300-399, 400-599, 600-999 mhz. (Cell phone blocked though) :(Also, the TX has been expanded. I will also throw in the softcase. ($30 value)

This is a good radio, but I am selling it because I want a dualbander w/ 2 vfo's. You can be the new owner for $300 + shipping from Montana.

Thanks,
Adam / kc7ljq@hotmail.com

Working on a baseband sub-processor for killer homebrew rig and need some help: I know of the following commonly used signalling formats - are there others? Especially looking for formats that are public or at least published somewhere. The following list contains lots of (R), TM, etc. - ownership as applicable where not noted:

Continuous Tone Coded Squelch System (CTCSS)
Digital Coded Squelch (DCS)
Single Frequency, Two-tone Sequential like
Motorola Modified General Encoding Code Plan
Motorola General Encoding Code Plan
Motorola Code Type Assignment Method
Metro-Page 10 and 100 Code Plan
Motorola Sub-Audible Code Plan
Modax / Moden / Alert Center Code Plan
GE Code Plan
Quick Call (Code Type Y)
Decimal Digital (5/6) Paging
HF AIRINC SELCAL 2+2 Paging (aviation)
DTMF Code Squelch / ANI
DTMF Paging (the nnn*mmm kind mostly amateurs use)
DTMF Messaging (the Kenwood kind; anybody know if it's on-line anywhere?)
ASCII ANI
Trunked - Motorola
Trunked - Logical Trunked Radio (LTR-E J Johnson)
Trunked - EDACS (GE)
Trunked - SmarTrunk
Single-frequency Inversion
Split-band Frequency Inversion
CODEC means, like Moto ASTRO, SecureNet, GE SecureGuard, etc.
AX.25 Packet (HF, VHF, 9600 baud)
RTTY (all modes, shifts, etc.)
CW (A1 and A2)
SSTV (all modes)
Digital Selective Calling (maritime)
Emergency Alert System (new) and EBS (old)
IMTS (is this still on the air anywhere?)
Station control tones like
Non-Simulcast Key Command Function Tones
Simulcast Key Command Function Tones
Station Group Disable (Knock-down) Tones
The International Radiotelegraph Alarm (maritime)

The International Radiotelephone Alarm (maritime)
Class A/B EPIRB Sweep Alarm

Thanks!

>Well, I have the VOX, PBT, and now the NB, but the FM is going to take more
>than adding a wire. I don't really need it anyway, I guess.

FM was a seperate board, EX-106 I think. It is long out of
production and no longer available from ICOM.

>Say, do you know where I can get the 430 Mhz version, the IC-451? Then I
>would have all three.

The IC-451 was a 430 to 440 Mhz radio. You could change it to cover
440 to 450 Mhz by changing some crystals and IF transformers. The
IC- 451 will not cover the entire 430 to 450 MHz range though.

Just about any HT is going to do the job for you, based on your description. You can probably get a Yaesu FT-470 used for that price, probably with some extra accessories. I have one and it works great.

>2. Packet Terminal Controller (for Pentium IBM Compatible PC. 1200bps
>minimum; perferbly 2400bps or more. under $100)

Check out the Kantronics KPC-3. It's only going to give you 1200 baud but it is small, works off a 9v battery if need be, has a mailbox, etc.

>Also I would like to know a good store for hand helds or packet

Source record: 176710

Yeh, Radio Shack is an easy target. But that's not the fault of the customer; they don't staff it, stock it, or own it. Myself I wasn't "expecting" anything... I >hoping<, I seem to remember is the word I used. But that said, I really do understand the frustration of the poor underpaid guys on the floor, though, because often they are as unsupported by their company as are their customers. And this is not customer service. And it is the lack of customer service, no matter at what level it enters the picture, that produces a no-win situation.

Simply dumbing down customer satisfaction to the lowest Troglodite who walks in the door doesn't excuse the store's many failings, but it's a point well taken. If Radio Shack is just a general consumer electronics retailer, which is what I thought they were, then it shouldn't say, "Hey! We're now serving the amateur radio market as well!" Which is what they seemed to indicate with releasing and advertising the HTX-204 amateur radio transceiver.

But I realize it's just a perspective thing and not all stores are as dumbfounding as the ones in my area (and I seem to remember my original post shamelessly referring to personal prejudice, i.e., mine). But nonetheless, I myself very much appreciate your counterpoint.

Indeed, this week's NewsLine just reported the recall tonight, calling the HTX now "a collector's item." That's kind of pushing it (what it is this, the HTX-204 Renoir?), but the commentators of NewsLine have never been known for their droll understatement. The reason, they reported, is RS is now in a deep -- what's the phrase? -- legal embarrassment.

If anyone's missed it, they said the reasons were twofold: 1.) seems the radio can indeed be "easily" modified to illegally transmit on >any< of the very nice wide range of frequencies it receives [that's what >they< said; that's now what >I'm< saying] and, here come the other shoe, they said there was a blatant contractual violation wherein it was to be of a distinctive design (it was in virtually every respect almost an exact copy of the ADI model, which I pointed out in my original post and in a message to Radio Shack).

And they just now noticed?

Yikes.

FS: Packet setup for $25

I have for sale a Bell 202 modem, plus all the parts
and instructions to put this on the air for packet
use. It works much like the new BayComm modems, and
in fact uses the same software. The modem is external
and plugs into the wall. All parts are included to
wire your HT or mobile radio. Basically, the only
thing you have to do is create the cable to go from
the modem to the radio using the supplied components
to detect the PTT and feed the audio. Also a regular
old 25pin cable is needed for between the computer
and the modem. You don't need to be an EE to figure
out this little homebrew project, but a simple knowledge
of soldering, etc. is suggested. A good amount of literature is
included with articles from ham radio magazines as well as
schematics on how to make the patch cable. I'm
reselling this item as I bought it myself a few months
ago for the same price. I plugged in the modem to the
wall, and it turns on and appears to work fine. After
I received the equipment, I never got the chance to
make the cable and get it on the air since. At this
point, my packet connections on the radio are being
used by an autopatch, so I don't really have the means
to use this item conveniently. It can't compete with
high-end TNC's, but hopefully someone else
can use it to get started on packet for a low price.
Included is the software, modem, parts, literature, and
schematics. I ship only USPS, and only in the CONUS
with a prepaid USPS MO. If you would like to purchase
or have a question, please email reply me. Thanks.

Jeff:

Just for your info. I just received my license and passed to Tech Plus two weeks ago.... I used Code Quick and was very hapy with it ! I will be upgrading to General this summer (I hope) and continue to review the tapes and use their "steppers". While some of the material seems "over simplified".... DO IT ! It really worked for me. I've been told that once you pass your exam at 5 to 7 wpm the best thing to boost your speed further (not to mention your interest) is to get on the air and use it ! Thats what I plan to do ! If I can be of any help to you just drop me an email !

>Funny. Some hams want rigs that can be upgraded when a new feature comes out. But they don't buy the rigs that have this attribute, such as the TenTec Omni 6, which can be upgraded by the user to the new Omni 6+.

Of course they don't. The typical ham wants the following features in a rig:

* 0-10 GHz continuous coverage (especially TX, so they can talk to the police)
* All modes
* Lifetime free upgrades and updates from the manufacturer
* Smaller than a cigar box
* Performance like a Yeasu FT-1000D
* Cost less than $200

From: "Walter R. Jones, Jr - KC7HEX" <kc7hex@amsat.org>
Message-ID: <336813A2.7C63@amsat.org>
Source record: 176478

I have the following station for sale:

Kenwood TS 440S/AT (built in tuner)
Kenwood PS 430 (power supply)
Kenwood SP 430 (speaker)
Kenwood MC 60 (microphone)
Kenwood PC-1A (phone patch)

The Kenwood 440S/AT has the YK-88-CN CW filter installed.

The station also include the IC-10 Interface

I have all the original operators manual, service manual, and the
computer interface documentation. Would like to selling locally
or to someone who will see the setup in person. Nice station.
It has the MARS/CAP modification. All the above for only $1,300
pick-up and will ship for $1,350

Also have the Kenwood TS-520 SE for sale with original
box, manuals for only $350.

The problem you are describing is a common one. It is unusual
however that it cannot be duplicated on a test bench. Ther PLL loop
specific to the 7.00 to 14.999 MHz range is at falt. A "shotgun"
approach to the circuit may solve your problem. However there is no
guarantee. Associated Radio has serviced many TS-440's with this type
of PLL unlock. You can check their web site at
www.associatedradio.com Good luck!

2368. YAESU ANNOUNCES NEW KW HF+6M Amplifier

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-30 00:00:00 UTC
From: Joe BV/N0IAT <joentam@transend.com.tw>
Message-ID: <3366EED6.44B@transend.com.tw>
Source record: 176482
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.dx

I just received my April issue of CQ-Ham Radio (the JA ham magazine). Several new products are now available in JA, including new offerings from Yaesu, Alinco, and Icom.

Icom announces IC-706 Mark 2 (old news, I suppose)
Yaesu announce FT-920 (old news, I suppose)
Alinco announces DJ-C1 and DJ-C4 micro slim 300 mW vhf/uhf radios.
Yaesu announces: VL-1000/VP-1000 solid state linear amplifier.

For those not familiar with the JA regulations, they were changed recently with the primary modification being power output increases for the various classes of ham licenses. The Class-1 licensee is now allowed to broadcast at 1KW output, as opposed to the previous limit of 500W. In line with the power increase, Yaesu has introduced the VL-1000 1KW solid state linear amplifier. Specs follow, albiet from my weak Japanese language reading ability. Additionally, Yaesu announces the matching VP-1000 Amplifier Power supply. Some key points:

Band Coverage: 160 THRU 6 meters,
Power: out 1KW on 160 thru 10, and 500W on Six Meters
Size of Amp: 41cmX13.5cmX41CM (HWD)
Size of PS: same size as amp...matches amp
Includes built in (integrated) 1KW Automatic Antenna Tuner
capable of matching a 16.7 to 150 ohm load on HF bands and
capable of matching a 20 to 125 ohm load on SIX meters
Transistor line up: 8 X MRF150 MOSFETs
Operating Voltage of amp: 48 amps at 48 volts
Power supply: capable of running on 100 to 120, or 200 to 240 VAC
suggested using 220VAC if running 1KW.
Weight: 15 Kg for the amp, 12 Kg for the power supply

The amplifier display is an "omni glow" LCD readout, and though the print is small, I believe one can monitor the following items: Out Power, VSWR, Collector Current, Frequency, and mode.

This is a slick looking amplifier, much better than the predecessor FL7000, which is now about 12 years old (or more?). Styling matches the FT920 exactly, with the 1000MP being a close but not perfect match. To see a picture of the map, go to my ham radio web page at:

http://www.transend.com.tw/~joentam/VP1000.jpg

73, and hope DXers, contesters, or those looking for an amp find
this information useful.

73,
Joe Fitter BV/N0IAT in Taipei Taiwan R.O.C.

From: Jonathan <tsumon@gtnet.gov.uk>
Message-ID: <33673219.B68@gtnet.gov.uk>
Source record: 176486

I am having trouble with mu internal PSU inside my FT736. It works fine but creates so much noise I am unable to use my HF transceiver which sits next to the FT-736.

Using an analyser I am able to see wide band noise coming from the PSU below 40 MHz.

Does anyone know how to stop it? I would like to use a converter I built for 29 MHz to 50 MHz but with so much PSU noise this is impossible.

Body handling: Inline uuencoded payload not displayed: Kenwood TM-V7AE Modifications !!!.txt

Hi,

The Kenwood TM-V7A/E is the new version of the TM-732A/E. It's a FM-dual bander for both 2m and 70cm with 50W on 2 and 35W on 70cm. The transceiver has an alfanumeric display with 180 memories, graphical band scan function, 9600 baud packet input (allowing to run packet on one band and simultaenous QSO on another band) and all the other features you can find on a normal transceiver. In one word, I haven't seen a comparable rig so far.

In the few weeks I now own one, I think it is a great rig with a lot of features. The only minor issues that I heard of are:
- there's no subband mute. This would be handfull when listening to two bands, the second band would mute while receiving input on the primary. For me personal, I can live with it since listening to two QSO is confusing anyway and the bandscan is a lot nicer to monitor for any activity.
- the 1750Hz contains a strange noise. This is a problem that I found out myself and of which I believe it's a child-problem (so they have it all). The problem causes a failure to open a repater (in Belgium 1750Hz is used to activate them) by the 1750Hz is some special cases. (90% does work fine).

About the mods, a file is attached with all the info I have.

I think the board was the UT-28, always get it confused with the ICOM
DCS board for the radio. The IC-28 would only decode CTCSS in Simplex
and only encode CTCSS in Duplex. No mod to get the radio to decode in
duplex. though you could encode in simplex by setting the radio into
duplex and adjusting the offset to zero MHz.

2383. Re: TS440S problem on switch on.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-30 00:00:00 UTC
From: rmwatson@eskimo.com
Message-ID: <E9FrA4.345@eskimo.com>
Source record: 176546

Having recently purchasing a used Kenwood TS440SAT, and working for a company that sells LTR mobile radios, I was able to acquire at cost the operating manual and service manual for the above radio.

When I received the manuals, I also received all service bulletin updates, and what you both have discussed was sent out in a bulletin, reference #:SB-952, titled TS-440S Intermittent Operation. The date of the bulletin is 01/24/89.

While stating basically, (and in a nutshell), "..., while any number of components may cause such problems, if the Control circuit is suspect, there is a possibility that the ROM socket is at fault...".

It then goes on and explains how to possibly alleviate the problem. I would suspect that if you were to request this particular bulletin, it could possibly be either mailed or faxed to you, although I suspect that you would rather Kenwood repair the problem, (and rightfully so).

Anyway, I just wanted to put my 2 cents worth in, and let you know that a possible and probable fix was found about 8 yrs ago, so yes, they have known for quite some time.

yes but when you transmit you will blow the front end of the scanner. Plus
adding the scanner to the system will change the impedance of the antenna.

I have an '83 CJ-7. I use a radio shack mirror mount attached to the
spare carrier. I use this on both sides of my tire. On one side, I have a
larson NMO 270 on a trunk mount attached to the mirror mount. It's not
the prettiest thing, but in four years, I have not had to tighten it at
all. It really doesn't stand out toobad. One the other side, I have the
same Mirror mount. I use the Hustler cg-144 2m for long distance.
However, the Larson gets me all across the DFW metroplex.
Hope this helps.

Hi to all,

I have purchased a ICOM IC 706 MARK II and Seller tell me that with
a simple modification :
-remove diodes D116 D118 D119 located in "Main Unit"
I will have complete RX fm 0,5 up to 200 Mhz
TX fm 0,5 up to 60 Mhz
TX fm 136 up to 174 Mhz

I have the doubts and before modification I ask if anyone have suggestions
about this matter.
Thanks in advance for help.

On 28 Apr 1997 11:36:13 GMT, "Alessandro Bondoli"

Hi Allesandro... Fair Radio Sales has aseveral converters that will do
this... mostly expensive. But they ALSO have a "kit" of parts for one
you can build on your own... with the schematic for the unit they were
removed from. Also, they sell pretty reasonably 120/90 VAC 50/60Hz
synchros. Good luck.

I agree - I've been to HRO in Atlanta and Virginia - Both have been
helpful and fair. And they will usually try to match prices of
others. $20.00 to China is more than fair. It costs about $0.50 per
1/2 ounce just to mail anything to China.

> =

The firmware inside the radio has been changed so that pulling the plug
will not toggle the radio into a European mode. This change was made in
radios with the 3rd and 4th digits of the serial number greater the 05. =

Subject: Yaesu FT-50R Guide V 1.1
From: childers@garlic.com (Bill Childers)
Date: 10 Jul 1996 21:52:28 GMT

The (In)Complete Guide to the Yaesu FT-50 Version 1.1

Compiled by Bill Childers, KE6VVW

Disclaimer & Other Nonsense
The information in this document is a guide to the FT-50 ONLY. =
Having had more than a few radios in my amateur experience, I =
understand how most hams wish to learn as much about their rigs as =
possible. I have compiled this guide to allow other people to =
learn more about the radio without having to search all over for =
information. I do not guarantee the validity of this information, =
as Yaesu may change programming or hardware so that some of the =
techniques in this document may cease to function. I am not =
responsible if these instructions damage your rig in some way. All =
I can say is that I have performed the following procedures to my =
unit, and I am quite pleased with the results. Your mileage may =
vary, etc.
=

History

Version 1.0
1st introduced.

Version 1.1
Added: Game mode, Changed High Power Mod to "Internal System =
Alignment". In this section I also detail the squelch and S-meter =
adjustments. Also added info to the bug on the FTT-12 Keypad.

Introduction
The Yaesu FT-50 is perhaps the most unique VHF/UHF Handheld =
manufactured today. It's made to MIL-SPEC 810, for dust, =
splashproofness, and vibration. Out of the box, it has not only =
dual band 2m/440 capability, but wide FM receive and AM receive as =
well. In addition, it receives 76-200 MHz, 380-500 MHz, and =
700-900 MHz (Cellular Blocked). It has one of the fastest scan =
speeds for an amateur HT. It also has the unique ability (w/ =
ADMS-1C software) to interface with an IBM PC running Windows and =
have memories and settings uploaded/downloaded. In addition, it =
has DCS (digital coded squelch), ARTS (auto-ranging transpond =

system), and Yaesu's excellent transmit and receive battery saver =
features. It also uses Yaesu's extremely efficent FET power module =
that allows for 5W+ of output power with a 9.6V battery pack. With =
the optional FTT-12 keypad, the unit also performs CTCSS decode, =
DTMF paging, and also incorporates a Digital Voice Recorder! All =
of this functionality in such a small package makes it my rig of =
choice.

Problems (Bugs)
Unfortunately, the FT-50 is plagued by a few bugs. None of them =
are very serious or life-threatening, just a bit annoying. First =
among them is its Wide-FM receive. Apparently Yaesu engineers =
didn't put a wide enough filter in the unit, and some of the =
bandwidth of broadcast FM signals gets "chopped off". This means =
that the rig is near useless for listening to music on the =
broadcast FM band. It works marginally with voice only on the same =
band. My opinion on this problem: If you want to listen to music, =
bring a small Walkman or other transistor radio with you. The '50 =
does an adequate job of bringing voice signals in on broadcast FM, =
so it's good for listening to emergency broadcasts.
The second "bug" lies in the optional FTT-12 keypad. The manual =
for the radio states that you can set up a "voice mail" type of =
functionality that lets your radio operate unattended and record =
calls for you. This mode doesn't work correctly, although the =
built-in voice recorder works great. It seems that the unit will =
playback the wrong voice partition. The problem appears to be in =
the DTMF page-answer-back area. If you're buying the '50 and =
FTT-12 solely for this purpose, DON'T! It doesn't work and there's =
no current workaround.
The third bug has been complained about a bit. It seems that some =
'50s suffer from a low Tx audio problem. This is due to a factory =
adjustment that is set a bit on the low side. It is easily fixed. =

(See Factory Adjustments below).
The fourth "bug" is synergistic with the ADMS-1C software. If =

there is some kind of problem in downloading a file to the radio, =

the software aborts with an error, and the rig is left with it's =

memories cleared in a "limbo" state. This state is actually the =

European band plan, and if done properly, the rig can be modified =

to receive even more frequencies=85 which will be described later. =

(See modification section) However, if you want to return the rig =

to its natural state, simply download a blank frequency file =

(NONAME.RDF) to the unit. All should be well.

Factory adjustments
If your rig suffers from the low Tx audio problem, here's how to =

fix it.

1. Remove the battery and antenna.
2. Remove the "NiCd" sticker on the heat sink. If you remove it =

very carefully, it's possible to re-install it later with the same =

stickum that's on it.
3. Look in the cavity where you removed the sticker. Proceeding =

from left to right, here's what you'll see=85
Phillips head Screw (Holds the keypad in)
Small Silver Potentiometer (VR1001=97VHF Deviation =

Adjustment)
Small Silver Potentiometer (VR1002=97UHF Deviation =

Adjustment)
Small White Potentiometer (TC1001=97DONT TOUCH! CTCSS Tone =

Adjustment!!!)
Phillips head Screw (Holds the keypad in)
4. Take a small Phillips head Screwdriver and turn both VR1001 and =

VR1002 about 1/8 turn clockwise. This will increase the VHF and =

UHF deviation and fix the low Tx audio problem. If it's not enough =

Tx audio, simply turn both pots another 1/8 turn. Make sure to =

turn both pots the same amount!
5. Replace the NiCd sticker, battery, and antenna.
6. You're Done!

Internal System Alignment (May not work on some radios)
NOTE: This setting appears to work on radios that have NO MEMORIES =

programmed. You might want to try STEP 3 before clearing your =

memories. If step 3 doesn't work, you probably need to clear your =

memories. BE CAREFUL with these settings=85 it's possible to really =

mess the rig up by setting some funky squelch or something=85 you =

might want to write the default settings for your rig down.

1. Select 2m VFO frequency.
2. Turn the radio off.
3. Push LAMP, PTT, Knob, and PWR at the same time. The rig will =

turn on with the squelch open, so turn the volume down!
4. The '50 will display "BAND xxxxxx" where xxxx may differ =

depending on your radio and whatever mods you may have performed.
5. Turn the top knob. There are a variety of settings available. =

Here is a listing of them:
=B7 HSSQ: Squelch Hysteresis Adjustment, adjusted by the dial.
=B7 THSQ: Squelch Preset Threshold
=B7 TISQ: Squelch Preset Tight
=B7 S1LV: Low-Scale S-1 Adjustment.
=B7 S9LV: S-Meter Full Scale Adjustment.
=B7 HIPO: Hi Transmit Power Adjustment: Should be calibrated for 5W =

(Can be pushed higher with a 13.8V Supply)
=B7 L3PO: Level 3 Power Adjustment: Should be adjusted for 2.8W.
=B7 L2PO: Level 2 Power Adjustment: Should be adjusted for 1W.
=B7 L1PO: Level 1 Power Adjustment: Should be adjusted for .1W.
6. Select the adjustment you wish.
7. Push in the Top knob. There will be a "s" that appears next to =

the displayed number.
8. Rotate the knob to change the setting.
9. Change other settings, if desired. =

10. Push the knob for more than 1 sec to save the profile.
11. Select 440 VFO frequency.
12. Repeat Steps 3-10 to adjust the UHF Settings. UHF Settings will =

have a "U" in front of them.

Modifications
The FT-50 is extremely easy to modify. The first modification is =

performed for you at the factory=85 but for those of you who =

accidently disabled it, or changed it=85 here it is.

Extended U.S. Receive Mod (Expands receive from 144-148 & 430-450 =

to 76-200, 380-500, 800-999 'cell blocked') NOTE: All =

memories will be erased.
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.
3. The unit now has U.S. Extended Receive.

MARS/CAP mod (Extended Transmit Mod: app. 144-159, 420-470) NOTE: =

All memories will be erased. =

Don't transmit on bands that you're not licensed for!! Besides =

being illegal, it creates problems for people using those =

frequencies.
1. Remove battery & antenna
2. Remove NiCd Sticker on Rear Heat Sink
3. Loosen (Don't Remove) Philips head screws on rear that hold =

keypad in.
4. Use screws as thumb holds to press keypad out.
5. Remove screws.
6. Remove Keypad.
7. Under Keypad on Left Side there is a series of Solder Jumpers. =

They are labeled in white from 1-3. Only #1 will have solder =

jumpering it. Remove the solder, being careful not to damage or =

touch any other components. WARNING: If you're not good at =

desoldering, or have shaky hands, you might want to have someone =

else do this for you. It's REAL easy to damage the rig.
8. Reinstall Keypad. Be careful of the O-ring around the keypad. =

Make sure it's not twisted or damaged, as the waterproofness of the =

unit could be compromised.
9. Install sticker, battery and antenna.
10. Hold down Knob and Lamp keys while powering the unit on. =

(Extended Receive Mod as above.)
11. Completed!

Super-Hyper Awesome Mod=85 The mother of all Mods!!! (Requires =

ADMS-1C software and MARS/CAP mod to be performed)
Receive: 76-999 Mhz (No displayable holes!!!)
Transmit: 120-221 Mhz, 320-499 Mhz (AGAIN, Don't transmit on =

frequencies where you're not licensed)
NOTE: This mod will disable ARS (automatic repeater shift) and will =

set 2m and 440 repeater offset to =

weird numbers. Make sure you enter repeater offset and +- =

shift manually. Repeater offset needs =

be set once for the rig, then it should be able to be =

forgotten about. It will also clear memories.
Remember above where I mentioned the ADMS-1C software having a bug? =

Here's where the enterprising and curious ham can take advantage =

of that. This mod will install the European band plan in your =

radio=85so without the MARS/CAP mod you will lose the top portion of =

your 2m band.
1. Are there frequencies in your radio? Don't want to lose them? =

Simply get the data from your radio as it sits=85 you can "merge" the =

frequencies later. Save the file.
2. Perform the MARS/CAP mod as outlined above. Get the data from =

the mod and name it USA.RDF.
3. Attempt to send the same data to the radio. In the middle of =

the transfer (around 50%), pull the adapter cable to the PC out of =

the radio.
4. Thanks to the bug, your radio is now in European mode! Perform =

the Extended Receive Mod by holding the Knob and Lamp keys down =

while turning the unit on.
5. Now, the Automatic Repeater offset doesn't work. There's no =

workaround. Note that the 2m offset has been changed to 0.00. Go =

to the menu by holding down the knob. Go to SHFT, Option 7. Press =

the knob. Turn the knob so that it reads 0.60. Press PTT.
6. Now, turn off the radio. Put it back into clone mode. Read the =

data back from the radio to the PC and save the file as EURO.RDF. =

7. If you want to enter frequencies manually or using ADMS as =

normal, go ahead. Everything should work. If you saved =

frequencies as above, open EURO.RDF and "merge" the frequencies =

from your USA.RDF file into it, and save it as another name. Then =

send the modified EURO.RDF (your filename) file back to the radio =

using the "template" file EURO.RDF. You're done!
8. To return the radio back to the U.S. band plan, send the USA.RDF =

file back to it.
Note that I have no way of measuring the sensitivity of the =

frequencies or the output power of the rig outside of the ham =

bands. The 220 coverage seems to be very poor, however, the radio =

does display 220 frequencies. It won't transmit on our 220 bands, =

though. 800 Mhz receive is vastly improved.

Game Mode
The FT-50R includes an interesting "game" that's programmed into =

it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).
2. The display will show GAME on the left side, and Spd 1 on the =

right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. =

Higher numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from =

left-to-right. As they come, you are supposed to push the number =

on the keypad that makes a sum of ten, followed by F. Example: 6 =

appears, press 4, F. If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

Content-Type: text/plain; charset=us-ascii; name="ft50_mod2.txt"
Content-Transfer-Encoding: 7bit
Content-Disposition: inline; filename="ft50_mod2.txt"

Yaesu FT50R

-Perform Mars/Cap mod by removing solder blob 1
-Buy the ADMS-1C computer kit
-dump your radios data into the computer & save file #1
-dump computer data #1 to radio, and pull plug out of radio
before its complete
-turn radio off, push and hold knob and lamp and turn on again
-dump radio data into computer and save file #2
-merge file #1 into file #2
-dump file #2 into radio

What you end up with should be:
-your original radio memories and settings
RX 76-540 590-999 cellular included
TX 120-220 350-500

This mod restores cellular, and wipes the Mars/Cap band limiting
info. Transmitter will lock over the entire range & transmit to
a nearby scanner, but I dunno what power output or spectrum
quality is like.

Newsgroups rec.radio.amateur.equipment
Message-ID <861456420.20233@dejanews.com>

Hello everybody !

I nedd your help to set-up the internal CPU settings for YAESU FT-50.

I wish to gnow the default values for the following settings:

VHF:

HSSQ
*THSQ
*TISQ
*S1LV
*S9LV
HPO
L3
L2
L1,

and the same corresponding settings for UHF

!!! Do NOT push the KNOB while diplaying the * marked settings !!!
To enter to the CPU mode settings the action is :

1) reset the FT50 by KNOB+MON+POWER-ON
2) press LAMP+PTT+KNOB+POWER-ON
3) The display shows BAND A1(A3)
4) then rotate the KNOB WITHOUT PRESSING IT !!!!

To exit press POWER OFF again

Thnx in advance

Bogdan
bcs@starnets.ro

> =

The firmware inside the radio has been changed so that pulling the plug
will not toggle the radio into a European mode. This change was made in
radios with the 3rd and 4th digits of the serial number greater the 05. =

Subject: Yaesu FT-50R Guide V 1.1
From: childers@garlic.com (Bill Childers)
Date: 10 Jul 1996 21:52:28 GMT

The (In)Complete Guide to the Yaesu FT-50 Version 1.1

Compiled by Bill Childers, KE6VVW

Disclaimer & Other Nonsense
The information in this document is a guide to the FT-50 ONLY. =
Having had more than a few radios in my amateur experience, I =
understand how most hams wish to learn as much about their rigs as =
possible. I have compiled this guide to allow other people to =
learn more about the radio without having to search all over for =
information. I do not guarantee the validity of this information, =
as Yaesu may change programming or hardware so that some of the =
techniques in this document may cease to function. I am not =
responsible if these instructions damage your rig in some way. All =
I can say is that I have performed the following procedures to my =
unit, and I am quite pleased with the results. Your mileage may =
vary, etc.
=

History

Version 1.0
1st introduced.

Version 1.1
Added: Game mode, Changed High Power Mod to "Internal System =
Alignment". In this section I also detail the squelch and S-meter =
adjustments. Also added info to the bug on the FTT-12 Keypad.

Introduction
The Yaesu FT-50 is perhaps the most unique VHF/UHF Handheld =
manufactured today. It's made to MIL-SPEC 810, for dust, =
splashproofness, and vibration. Out of the box, it has not only =
dual band 2m/440 capability, but wide FM receive and AM receive as =
well. In addition, it receives 76-200 MHz, 380-500 MHz, and =
700-900 MHz (Cellular Blocked). It has one of the fastest scan =
speeds for an amateur HT. It also has the unique ability (w/ =
ADMS-1C software) to interface with an IBM PC running Windows and =
have memories and settings uploaded/downloaded. In addition, it =
has DCS (digital coded squelch), ARTS (auto-ranging transpond =

system), and Yaesu's excellent transmit and receive battery saver =
features. It also uses Yaesu's extremely efficent FET power module =
that allows for 5W+ of output power with a 9.6V battery pack. With =
the optional FTT-12 keypad, the unit also performs CTCSS decode, =
DTMF paging, and also incorporates a Digital Voice Recorder! All =
of this functionality in such a small package makes it my rig of =
choice.

Problems (Bugs)
Unfortunately, the FT-50 is plagued by a few bugs. None of them =
are very serious or life-threatening, just a bit annoying. First =
among them is its Wide-FM receive. Apparently Yaesu engineers =
didn't put a wide enough filter in the unit, and some of the =
bandwidth of broadcast FM signals gets "chopped off". This means =
that the rig is near useless for listening to music on the =
broadcast FM band. It works marginally with voice only on the same =
band. My opinion on this problem: If you want to listen to music, =
bring a small Walkman or other transistor radio with you. The '50 =
does an adequate job of bringing voice signals in on broadcast FM, =
so it's good for listening to emergency broadcasts.
The second "bug" lies in the optional FTT-12 keypad. The manual =
for the radio states that you can set up a "voice mail" type of =
functionality that lets your radio operate unattended and record =
calls for you. This mode doesn't work correctly, although the =
built-in voice recorder works great. It seems that the unit will =
playback the wrong voice partition. The problem appears to be in =
the DTMF page-answer-back area. If you're buying the '50 and =
FTT-12 solely for this purpose, DON'T! It doesn't work and there's =
no current workaround.
The third bug has been complained about a bit. It seems that some =
'50s suffer from a low Tx audio problem. This is due to a factory =
adjustment that is set a bit on the low side. It is easily fixed. =

(See Factory Adjustments below).
The fourth "bug" is synergistic with the ADMS-1C software. If =

there is some kind of problem in downloading a file to the radio, =

the software aborts with an error, and the rig is left with it's =

memories cleared in a "limbo" state. This state is actually the =

European band plan, and if done properly, the rig can be modified =

to receive even more frequencies=85 which will be described later. =

(See modification section) However, if you want to return the rig =

to its natural state, simply download a blank frequency file =

(NONAME.RDF) to the unit. All should be well.

Factory adjustments
If your rig suffers from the low Tx audio problem, here's how to =

fix it.

1. Remove the battery and antenna.
2. Remove the "NiCd" sticker on the heat sink. If you remove it =

very carefully, it's possible to re-install it later with the same =

stickum that's on it.
3. Look in the cavity where you removed the sticker. Proceeding =

from left to right, here's what you'll see=85
Phillips head Screw (Holds the keypad in)
Small Silver Potentiometer (VR1001=97VHF Deviation =

Adjustment)
Small Silver Potentiometer (VR1002=97UHF Deviation =

Adjustment)
Small White Potentiometer (TC1001=97DONT TOUCH! CTCSS Tone =

Adjustment!!!)
Phillips head Screw (Holds the keypad in)
4. Take a small Phillips head Screwdriver and turn both VR1001 and =

VR1002 about 1/8 turn clockwise. This will increase the VHF and =

UHF deviation and fix the low Tx audio problem. If it's not enough =

Tx audio, simply turn both pots another 1/8 turn. Make sure to =

turn both pots the same amount!
5. Replace the NiCd sticker, battery, and antenna.
6. You're Done!

Internal System Alignment (May not work on some radios)
NOTE: This setting appears to work on radios that have NO MEMORIES =

programmed. You might want to try STEP 3 before clearing your =

memories. If step 3 doesn't work, you probably need to clear your =

memories. BE CAREFUL with these settings=85 it's possible to really =

mess the rig up by setting some funky squelch or something=85 you =

might want to write the default settings for your rig down.

1. Select 2m VFO frequency.
2. Turn the radio off.
3. Push LAMP, PTT, Knob, and PWR at the same time. The rig will =

turn on with the squelch open, so turn the volume down!
4. The '50 will display "BAND xxxxxx" where xxxx may differ =

depending on your radio and whatever mods you may have performed.
5. Turn the top knob. There are a variety of settings available. =

Here is a listing of them:
=B7 HSSQ: Squelch Hysteresis Adjustment, adjusted by the dial.
=B7 THSQ: Squelch Preset Threshold
=B7 TISQ: Squelch Preset Tight
=B7 S1LV: Low-Scale S-1 Adjustment.
=B7 S9LV: S-Meter Full Scale Adjustment.
=B7 HIPO: Hi Transmit Power Adjustment: Should be calibrated for 5W =

(Can be pushed higher with a 13.8V Supply)
=B7 L3PO: Level 3 Power Adjustment: Should be adjusted for 2.8W.
=B7 L2PO: Level 2 Power Adjustment: Should be adjusted for 1W.
=B7 L1PO: Level 1 Power Adjustment: Should be adjusted for .1W.
6. Select the adjustment you wish.
7. Push in the Top knob. There will be a "s" that appears next to =

the displayed number.
8. Rotate the knob to change the setting.
9. Change other settings, if desired. =

10. Push the knob for more than 1 sec to save the profile.
11. Select 440 VFO frequency.
12. Repeat Steps 3-10 to adjust the UHF Settings. UHF Settings will =

have a "U" in front of them.

Modifications
The FT-50 is extremely easy to modify. The first modification is =

performed for you at the factory=85 but for those of you who =

accidently disabled it, or changed it=85 here it is.

Extended U.S. Receive Mod (Expands receive from 144-148 & 430-450 =

to 76-200, 380-500, 800-999 'cell blocked') NOTE: All =

memories will be erased.
1. Turn the transceiver off.
2. Hold down the Knob and Lamp keys while powering the unit on.
3. The unit now has U.S. Extended Receive.

MARS/CAP mod (Extended Transmit Mod: app. 144-159, 420-470) NOTE: =

All memories will be erased. =

Don't transmit on bands that you're not licensed for!! Besides =

being illegal, it creates problems for people using those =

frequencies.
1. Remove battery & antenna
2. Remove NiCd Sticker on Rear Heat Sink
3. Loosen (Don't Remove) Philips head screws on rear that hold =

keypad in.
4. Use screws as thumb holds to press keypad out.
5. Remove screws.
6. Remove Keypad.
7. Under Keypad on Left Side there is a series of Solder Jumpers. =

They are labeled in white from 1-3. Only #1 will have solder =

jumpering it. Remove the solder, being careful not to damage or =

touch any other components. WARNING: If you're not good at =

desoldering, or have shaky hands, you might want to have someone =

else do this for you. It's REAL easy to damage the rig.
8. Reinstall Keypad. Be careful of the O-ring around the keypad. =

Make sure it's not twisted or damaged, as the waterproofness of the =

unit could be compromised.
9. Install sticker, battery and antenna.
10. Hold down Knob and Lamp keys while powering the unit on. =

(Extended Receive Mod as above.)
11. Completed!

Super-Hyper Awesome Mod=85 The mother of all Mods!!! (Requires =

ADMS-1C software and MARS/CAP mod to be performed)
Receive: 76-999 Mhz (No displayable holes!!!)
Transmit: 120-221 Mhz, 320-499 Mhz (AGAIN, Don't transmit on =

frequencies where you're not licensed)
NOTE: This mod will disable ARS (automatic repeater shift) and will =

set 2m and 440 repeater offset to =

weird numbers. Make sure you enter repeater offset and +- =

shift manually. Repeater offset needs =

be set once for the rig, then it should be able to be =

forgotten about. It will also clear memories.
Remember above where I mentioned the ADMS-1C software having a bug? =

Here's where the enterprising and curious ham can take advantage =

of that. This mod will install the European band plan in your =

radio=85so without the MARS/CAP mod you will lose the top portion of =

your 2m band.
1. Are there frequencies in your radio? Don't want to lose them? =

Simply get the data from your radio as it sits=85 you can "merge" the =

frequencies later. Save the file.
2. Perform the MARS/CAP mod as outlined above. Get the data from =

the mod and name it USA.RDF.
3. Attempt to send the same data to the radio. In the middle of =

the transfer (around 50%), pull the adapter cable to the PC out of =

the radio.
4. Thanks to the bug, your radio is now in European mode! Perform =

the Extended Receive Mod by holding the Knob and Lamp keys down =

while turning the unit on.
5. Now, the Automatic Repeater offset doesn't work. There's no =

workaround. Note that the 2m offset has been changed to 0.00. Go =

to the menu by holding down the knob. Go to SHFT, Option 7. Press =

the knob. Turn the knob so that it reads 0.60. Press PTT.
6. Now, turn off the radio. Put it back into clone mode. Read the =

data back from the radio to the PC and save the file as EURO.RDF. =

7. If you want to enter frequencies manually or using ADMS as =

normal, go ahead. Everything should work. If you saved =

frequencies as above, open EURO.RDF and "merge" the frequencies =

from your USA.RDF file into it, and save it as another name. Then =

send the modified EURO.RDF (your filename) file back to the radio =

using the "template" file EURO.RDF. You're done!
8. To return the radio back to the U.S. band plan, send the USA.RDF =

file back to it.
Note that I have no way of measuring the sensitivity of the =

frequencies or the output power of the rig outside of the ham =

bands. The 220 coverage seems to be very poor, however, the radio =

does display 220 frequencies. It won't transmit on our 220 bands, =

though. 800 Mhz receive is vastly improved.

Game Mode
The FT-50R includes an interesting "game" that's programmed into =

it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).
2. The display will show GAME on the left side, and Spd 1 on the =

right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. =

Higher numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from =

left-to-right. As they come, you are supposed to push the number =

on the keypad that makes a sum of ten, followed by F. Example: 6 =

appears, press 4, F. If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

I saw the price at $1350 at a Dealer's Web site. I guess they raised the
price $50. However, the discounting should happen in a bout 6 months.
Also the bugs should arise if there are any. I bet the radio will
eventually sell for $1250 from most Dealers and includ the separation
kit on promotions.

Source record: 176572

April 30, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

2410. Mods for IC-730?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-30 00:00:00 UTC
From: jjhanso1@students.wisc.edu
Message-ID: <3367576b.211865@news.doit.wisc.edu>

2414. HELP TNC>RADIO&TPK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-30 00:00:00 UTC
From: Robin@teleplex.net
Message-ID: <33685b19.8130233@news.teleplex.net>
Source record: 176577

Need some help:

I have a Kenwood TM-733 Dual Band Radio with the 1200 through 9600 TNC Port. I purchased the special TNC Cable that did not come with proper wiring information. I am trying to wire up to a KPC-9612 Plus TNC.

I have the system working with a cable to the speaker jack and the rest wired to the TNC jack on the front of the radio. This works to a point. The audio from the radio on the TNC jack is not squelched and as such the TNC will not work when this connection is made.

In using the system on TPK - the TNC comes set to NEWUSER MODE. There is no reference to NEWUSE mode in the 9612 manual but there is a supplement for the KPC-3 that states to reset the TNC to HOST or Terminal Mode. HOW?

The TNC will do a connect this way

EXAMPLE:

c al7oo
KD4SMM>AL7OO/1:
c al7oo

and hang.

With others TNC the second and third line do not appear. I cant figure out why or how to stop it.

Any suggestions?

Thanks in advance

Robin Michael

>
> Thanks,
> Dave
Yes, it's true. At one time I had both the HTX-202 and an old IC-2AT. I
was able to interchange the batteries with no problems. I know of no
other radios except the IC-2AT that it would exchange with. Perhaps
there were a couple of other ICOM radios that used the same battery as
the IC-2AT. Also, you can get secondary batts from Radio Shack and other
3rd party battery suppliers if you need them. Check out the ads in the
back of the latest QST for 3rd party battery suppliers.
If you need more info, drop an email to the address below.

Source record: 176587

Hello -

I'm looking for an adapter, but don't know
what it's called (or numbered), or how to
identify it other than a "N-to-waveguide"
adapter...

The waveguide-end of the thing would bolt
to waveguide with an outside diameter
of 1 1/4 by 2 1/2 inches, and the flange
outside dimensions are 2 3/4 by 4 inches,
and it has a ten bolt pattern. And the "N"
connector would probably be an N female.

What would be the "proper" nomenclature
for this item?

Thanks in advance

I'm looking for a talking multimeter. I used to own one marketed by MAplin, but it got drowned. No longer available. Only one I can find on the web is a 350 USD unit from Omega. Apart from being an inappropriate price for my application (!), it's a "larger than pocket" device anyway

There MUST be some more around. While I had my old one, it was just about the most useful gadget I ever bought (at around 40 GBP as I recall).

Any pointers?

You would call it a Waveguide to Coax Transition (or adapter).
The nearest standard waveguide I can come up with for those dimensions
is WR 229, or European R40 or WG11A. Its frequency coverage is
nominally from 3.30 to 4.90 GHz. Actual dimensions are as follows:

Inside: 2.290 X 1.145 inches
Outside: 2.418 X 1.273 inches
Wall thickness: 0.064 inches

Normal cost for 1 each is $385.00 with Type N Female.

Hope this helps.

Great features-Great Value

FoxGap C.W.
Memory Keyer Instructions:

Features:
- 5 to 40 words per minute rate.
- One message memory, about 1 minute at 13 WPM.
- CMOS chip, for longer battery life.
- Side tone oscillator with tone control.
- Side tone amplifier with volume control.
- Internal speaker.
- Runs low EMI mode for quiet operation while receiving.
- Tune switch, allows easy transmitter tuning.
- Operates on 9 volt battery, not supplied.
- and/or Operates on optional AC adapter.
- and/or Operates on your 12 volt shack supply.

The FoxGap CW Memory Keyer lists for $79.95
For a limited time the intro offer is $60.00
Shipping extra. We can ship UPS COD cash only,
MO, or certified check. For further information
contact Jim at 610-588-0282
Fax 610-588-0253 Or Email n2gkw@epix.net

Specifications:
Power requirement:
internal - 9 volt, around 50 milli-amps. Idle is about 9 milli-amps.
and/or
external - 12 volt, 100 milli-amps max. - optional.
Size: 3.250 x 4.375 x 1.600 inches (excluding knobs).
Weight: 8 ounces.
Sending Speed: 5 to 40 WPM +/- 10%.

Optional Components:
1 Phono Plug..... @ 1.00
1 1/4 inch Stereo Phone plug..... @ 1.75
1 AC Adapter ..... @ 4.95
Prices may change without notice, and do not include shipping.

2439. Problem with Baycom Packet Modem

Newsgroup: rec.radio.amateur.equipment
Date: 1997-04-30 00:00:00 UTC
From: dgravatt@falcon.cc.ukans.edu
Message-ID: <862436746.11947@dejanews.com>
Source record: 176602
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment

Hello all,
Got a problem with my Baycom packet modem. I've used it for a couple of years without problems, and then suddenly it started putting out bad QRM on various frequencies, one of which is 145.03, the main local packet spot. The modem itself is generating this interference, and it opens the squelch on my HT. I've checked all of the connections and reseated all the chips. If I remove the AM7910, the QRM stops (not too surprising). Any suggestions? If it turns out I need a new 7910, where could I get one?

Thanks in advance!

- Dan, N2PRC

BEGIN -- Cut Here -- cut here

Following is a list of Ham gear I'm parting with. The
prices are certainly negotiable, and I'm mainly interested in
selling everything on this list, so there will be some bargains.
I have most all of the manuals, documentation, etc., for these
items. Here's the list:

1. Forty-foot Rohn 25 Ham tower, with a HyGain TH-3
"Thunderbird" 10-15-20 Meter Beam antenna. Telex "Tail Twister"
Heavy Duty Rotor, and Control Station. Three element two-meter
beam, and Ringo Ranger two-meter vertical antenna, installed on
tower.

2. Service Manuals:
Kenwood TS-940S
Kenwood TM-2570A
Kenwood TR-7730
Kenwood TS-930S
Kenwood TS-130S (2 each)
Kenwood TS-820S (2 each)
Kenwood TS-180S
Kenwood TR-7400

3. Kenwood MB10 Two-Meter Mounting Bracket.

4. MFJ TNC-2 Packet Controller.

5. MFJ Microphone-Packet Controller Switch.

6. HAL Communications PCI-4000 PC Computer Board. The ultimate
in computer controlled CW, RTTY, ASCII, AMTOR and Clover digital
communications. Complete documentation. Bargain priced.

7. HAL Communications PCI-3000 PC Computer Board. Excellent
digital communications, (RTTY, CW, ASCII and AMTOR). Complete documentation.
Bargain priced.

8. "Ultra" 386/33 MHz Desktop Computer. Ninety megabyte hard
drive, 4 megabytes RAM, enhanced keyboard, and SVGA .28" color
monitor. Parallel port, 2 serial ports, game port, etc. Perfect
ham shack computer. Has Windows and lots of ham software
installed.

9. ICOM IC4AT 450 MHz Handi-Talki, with external microphone and
battery charger.

10. "Jackson" dynamic tube tester.

11. "Hickok" Model 6000A Tube Tester. (Collectors Item).

12. Western Union Main Line Telegraph Sounder, Model C-15
Excellent condition. (Collectors item).

13. "Bencher" ZA-1A Balun.

14. Heathkit IT-741D Logic Probe.

15. Heathkit "Cantenna", 1KW Dummy Load.

16. Epson MX80F/T Tractor Feed Dot Matrix Printer, with roll
paper adapter.

17. Heathkit HP2715, 9 - 12 Volt, 15 Amp, Fully Adjustable Bench Power
Supply.

18. Webster "Band Spanner" Mobile HF Antenna System.

19. New "Pro-AM" Two-Meter Mobile Antenna, (surface mount).

20. Sencore Digital Volt Meter.

21. Hewlett-Packard Vacuum Tube Volt Meter.

22. BC-221 Frequency Meter, with AC power supply. (Military
surplus).

23. Heathkit IB-1103 RF Digital Frequency Counter.

24. "QST" Magazines. January 1974 to March 1997, complete.

25. ARRL "Handbooks". Years, 1954, 1955, 1957, 1959, 1968,
1969, 1973, 1976, 1977 (2 each), 1978, 1979, 1980, and 1989.

26. "Ham Radio" magazines. Bound editions for years 1976 and
1977.

27. "National" NC-300 External Speaker.

28. CY-1300 Oscilloscope. Military surplus, condition unknown.

29. Two 440 MHz Transmitters. Tone output for remote repeater
control. Built in power supplies.

30. HAL MPT-3100 RTTY/CW/ASCII system. Originally cost over
$4000.00. Dedicated RTTY at its best. Includes HAL ST-6000
Demodulator and Scope, and DSK-3100 Disk Drive unit. Sacrifice
to a good home!

31. HAL SPT-2 "Spectra-tune" RTTY-CW Tuning Indicator

32. Kenwood SP-70 Speaker

33. Kenwood SP-520 Speaker

34. "Optoelectronics" Model 8007-5 10 Hz to 700 MHz Digital Frequency
Counter, with Probes and collapsible antenna.

UPS shipping available on all items, with the exception of
the tower package. Local pickup on that only.

Best Regards!

>in advance- Tom WA6HAS <sharples@hooked.net>

Actually, in my twenty-five years+ of writing about FM, repeaters and coordination, NARCC is one of the very few coordinators that can truly be called an overwhelming success. This is because NARCC lrearned early on how to say "NO" to adding more unnecessary repeaters to overcrowded bands and how to successfully remove nuisance repeaters from the air. The rest of the nation could learn a lot by emulating NARCC's high standards.

Yes in a in a fashion. There is a cable that connects to the speaker/mic jack on the side. This allows a pc to hook up to the radio and program it using the CLONE feature. Yaesu has some software that allows you to store all freqs, power settings, repeater shift, and name on your computer. You can keep multiple databases so that if you travel a lot, you can just reload the radio for the area your going to. This is a nice program. I think it's called ADM-1C.

I don't know of a Kenwood or Icom equiv.

Enjoy the new radio. All the features are a little overwhelming at first.
But they are also nifty features that will make using the radio fun. Stick
with it and reread the manual after you are a little more used to the
radio. You will get lots more out of it.

Enjoy

When I was deciding on a new radio I looked at the Yaesu
8500, Yaesu 8000 and the TM-V7A. They are all nice rigs.
The 8500 seemed a bit complicated to me. I'm not
comfortable with a radio which had the knobs on the mike

(its a popular radio that many people prefer I am not knocking it I like Yaesu products). Reports people had given me indicated the Yaesu's needed the manual for effective use (others implied I am too half-witted to operate a radio of such immense savoir faire -- kiss my ass Bozo). The Yaesu 8000 is also a fine radio but I needed alpha display. I have been told he 8000 is also missing sub band mute. I am not Yaesu bashing. Nor am I a blow hard Kenwood devotee.
Kenwood TM-V7A
I liked the 733. It has lots of features BUT without the manual the programming was so complicated your screwed. I also liked the 733 display BUT many the characters were way to small to read while driving. The buttons were to small n(for my fingers) on the 733 and the function button was in a bad spot and way too small. Operation while driving at night was not easy (for me). When you wanted to add a frequency to memory YOU had to keep track of which memories were in use and which were unoccupied. There was not built in CTSS decode ($60 option). Scanning was slow. The last straw that made me upgrade was no alpha memory. I have 40 repeaters in memory and it annoyed me because I was never sure which repeater I was doing the bla bla on.

The TM-V7A seems to be the heir apparent to the 733. It has lots of improvements in the display, programming, button placement and heat sinks. The TM-V7A addressed all the problems above. It has ALPHA MEMORY ! Its easy to read. Its very easy to program. It scans fast. It has all the features of the 733 and lots more in a much easier to use package. EXCEPT ONE FEATURE - NO MUTE - If you want to express your Joy about this to Kenwoood they can be reached at 3106395300 when the talking computer chip answers (to tell you what a valued customer you are) hit 2 then 6 OR you can Email them at cuyeda@ix.netcom.com They are slow to answer More on MUTE later.

The display looks terrible in the ad's but even in direct sunlight the display looks great. It gets lots of "wow's" from friends.

The radio seems to be bug and glitch free. I detected no hangs or problems or memory losses. All the features I tried worked fine. The manual is about 20 pages smaller than the 733 and is indicative of the effective menuing. After a few days with the radio you can put away the manual and leave it away.

Display characters are bright white on a blue background, are very large and easy to read from the drivers seat. When you select a band it displays that band in even larger characters. Even the small words on the display are easy to

read from the drivers seat. There is a reverse video setting (blue characters on a white background) for those who like that or just need a change now and then. I like normal mode my girlfriend like reverse video mode on the display. You can read and work almost all the radios features at 60 miles per hour.
Press the menu button and you can click through a bunch of menus. Each of those menus can take you through sub menus. The "display" menu for instance will allow you to change the brightness, contrast, reverse video or normal, or auto dim. In auto dim you select the brightness you want the radio in. Then when you hit a button the radio gets brighter. after a few seconds it dims again for normal operation.
There is one menu that displays instructions for all the features such as cross band repeat and deleting memories and all sorts of other features.
The menus for adding auto dial memories etc. are all easy to understand.
You can set one band to stop scan on carrier and the other to pause and resume. Or set both bands the same way etc.
There are about 20 menus and each has sub menu options.

The last menu you accessed is the menu that pops up when you hit menu again. That's nice if you doing the same thing over again. Say you are toggling between normal display and reverse display. The menu take you right back there. If your entering lots of memories the display take you back there etc.

You can reassign the buttons functions if you want.

MENU# Sub Menu

1 Transceiver guide: (instructions for loads
like cross band repeat etc.

2 Front Panel: Number of Channels or "Visual
Scan", Power on message, Multi-
Function Button labile 3
Display reverse, Display
contrast, Display
Dimmer, Auto Dimmer.

4 MEM chan lock out, VHF/UHF Mem
Channel Ratio,
Mem channel name, Auto PM Channel
Store.

5 Automatic repeater offset,
Offset Frequency,

6 Programmable VFO (Upper/Lower
limits (3 sets
of limits per band))

7 DTMC Number storing

8 Scan resume method

9 Advanced Intercept on/off
(Intermode
reducer)

10 Automatic power off

11 Transmit time out timer

12 DTSS Page code transmit delay,
auto page
cancel, Page Answer back

13 S-Meter squelch, S-Meter
Squelch Hang time

14 Beep volume, Speaker config,
Voice
synthesizer (with optional board).

15 Data Transfer rate, Data TX/RX
Band

16 Microphone control, Programmable
function
keys, DTMF Monitor.

17 Repeater TX Hold
And more!

You can do most things right from the mike such as: reverse offset, change power setting, change frequency, direct enter a frequency, move memory to VFO or VFO to memory, turn off squelch, go into Function mode, start scanning, stop scanning, go to call channel, scan call channel and another channel continuously, change the dual bands to VHF & UHF or VHF and VHF or UHF & UHF.

You can listen to AM and hear aircraft communication. I can pick up several airports and lots of "jet chatter" in a 50 mile radius of my car. I can pick up maritime communication no problem.

There is a simplex indicator mode which starts flashing if a station is within simplex range (when you activate it).

The CTSS decode works very well while repeater surfing. If you hear a repeater just press the tone button for a second and CTSS scan kicks in. It goes through the PL tones and beeps and flashes when it hits the correct one. If the station stops transmitting the CTSS scan pauses and waits for the station to transmit again. This means only one pass through CTSS is needed to find the right PL.

Programming memory:
Set the channel PL offset etc. on VFO mode then hit the function key. The memory display pops up and shows a solid triangle next to the memory number if the memory is occupied. It displays an empty triangle if the memory is not occupied (this prevents overwriting occupied memory as I used to do many times with the 733). Hit memory on the mem number you want and your done. Much improved.

To give that memory a name - display the memory number you want and hit the menu key. Stop at the memory menu option and select name. Enter the name and hit set etc. The name is programmed in. Its intuitive (at least for me). I have done it while driving.

There is a memory lock out that allows the scan mode to
skip a memory. In case you have a repeater where a blabber mouth wont shut up. The radio is simple enough to do all this
while driving.
One feature I like is -
If you were in scan mode when you turned off the rig. When you turn the radio on it jumps right back into scan mode! SCAN is fast. It looks like the thing is scanning 7 to 10 memories a second. Scan is either stop on carrier or stop for a few seconds. You can set each band differently if desired. You can set 2 upper and 2 lower scan limit ranges for each band. I suppose you could scan 144 to 148 then jump to 150 to 154 mhz with the second set of limits. I have not needed or used the second limit. You can also scan a "call channel" and another channel on each band. The display looks pretty busy when all the scans are going.

VisualScan: I don't see what good this is. So I can see there is activity on near by frequencies. What's the big deal I still have to scan them. I just don't get why they went through all the trouble.

MUTE mode is missing.
Kenwood for some reason left off the MUTE mode on this

radio. Its on the 733 but not the TM-V7A. This is the only complaint I have. I would not be shocked if later model have mute. The mute key is unassigned on the mike and probably only needs a software change to work. If you want to express your Joy about this to Kenwoood they can be reached at 310639-5300 when the talking computer chip answers (to tell you what a valued customer you are) hit 2 then 6 OR e-mail Kenwood at cuyeda@ix.netcom.com They are slow to answer. Despite missing mute I have learned to adjust the volume controls and am not going back to the 733 that's for sure.

There is no wireless memory transfer to another like radio. Kenwood says there is software coming to do this.

MODS:
There is a Mars CAP mod for Out of band transmit floating around. Basically you you take off the cover and snip a wire.

INTERMOD:
I live in Intermod hell. Being just across the Hudson river from New York City there is a constant assault from the building top antennas. I own a Yaesu FT-50R, Kenwood 733 and Kenwood TM-V7A. The Yaesu when hooked up to a roof antenna is almost unusable on some bands due to the Intermod. I ended up buying a $66 notch filter from PAR. That eliminated 98% of the problem.

The TM-V7A has an "anti intermod" mode. The TMV7A is better than the other 2 rigs. But it still gets blasted when I'm in the city. Just outside the city I get almost no Intermod but if your looking to totally eliminate Intermod with this radio you are going to need a notch filter.
The Antenna connection is a single PL259 with an internal duplexer (or is that a diplexer).
WHAT I DON'T LIKE
1) while programming the radio from a menu you have to pick a selection in under 10 or 20 seconds. What's the hurry? They could have left a little more time for the driver to decide. 2) Mute and wireless transfer were stupid features to leave off the rig.

In reality this is a very easy rig to use while driving. Its full featured and glitch free. You don't need a
manual (once you spend a little time with it). I will be picking a second one up for home use (when $$$ permits it).

I am using the detachable display. The cables from the 733 work on the V7 but the V7 cable kit came with a plastic holder you click the display in. When you want to remove the display you just unclick it from the holder. Its easier than the 733.

The TM-V7A has LOTS more heat sinks inside and outside than the 733 has. The mod for Mars Cap is just a snip of a wire. Audio reports have been very good.

I like the refinements on the V7A I miss mute but I aint going back to the 733. I am considering buying another for home as a replacement for the 733 at home.

I encourage your to write about what you like and especially what DON'T LIKE or would improve on your radio. The corporate adds only tell good news about zillions of features - not how impossible they are to use. Few of us want to buy the 100+ page manual to see what we are really going to be working with. On Internet we can read what real hams have to say not what a magazine that's trying to sell advertising has to say.

Selling Amps in the United States that are operation on 24 and 28 MHz
out of the box is illegal. No one is paranoid, its the law.

As a legitimate amateur operator your allowed by Part 97 to modify one
amplifier per year for 10 meter operation which will also open 24 MHz.
Most who want a 10 meter amp purchase an 160 thru 15 meter amp and get
the modification information from the manufacturer for 10 meters.

My son (KB0QHW) has a ICOM-735 and he just upgraded to Tech Plus. Before purchasing any VHF equipment, I wanted to find out more about transverters (10M to 2M). Does anybody have any experience with this type of equipment (Good, Bad or indifferent) I have not found any information regarding transverters nor any resellers advertising or selling them in their catalogs. I figure this is probably for a good reason. (I'm guessing it's probably just as cheap to buy a HT)

Any information would be helpful.

Not only can you listen to cell calls, but you can transmit WAY out of band, with the appropriate FCC penalties & criminal charges, of course.

Look up "radio shack mods" at www.dejanews.com.

You can drive a transistor with the voltage from the port, and the
transistor can run the relay. I do not recommend trying to drive the
relay on the current supplied by the port, provide an external supply.
A 2N2222 will work fine if your relay uses less than 800ma.
You should probably connect the port ground to the power ground.
Heres how you would connect the transistor.

```
Vcc
|
/collector
From port------|
\emitter
|
Relay
|
Ground
```

Transverters can be a good thing if you are interested in SSB/CW simplex
operation on VHF/UHF. But most HF rigs don't deal with repeaters well,
and the bulk of VHF/UHF operation is via FM repeaters. And there are
FM only radios which are almost as cheap as a good transverter (in some
cases cheaper), so that often makes more sense than struggling to use a
HF rig and transverter for operation for which they aren't suited.

However, let me encourage you to resist the temptation to buy a HT. They
are specialized tools for foot mobile operation. Most will overload badly if
connected to a good antenna, and most run too low power to be comfortable
copy for other stations. Buy a mobile/base radio instead. Used ones can
be had cheap.

correct me if i am wrong but this is considered an auxilliarly
link and therefore it is only legal to operate the link on 220Mhz and
above.
you can only use the 440 band as the uplink to a 2M repeater.
this is my reason for having a dualband with repeat. I was told
that it is only legal from 440 to 2M not the otherway around as stated
below.

Correct or not?

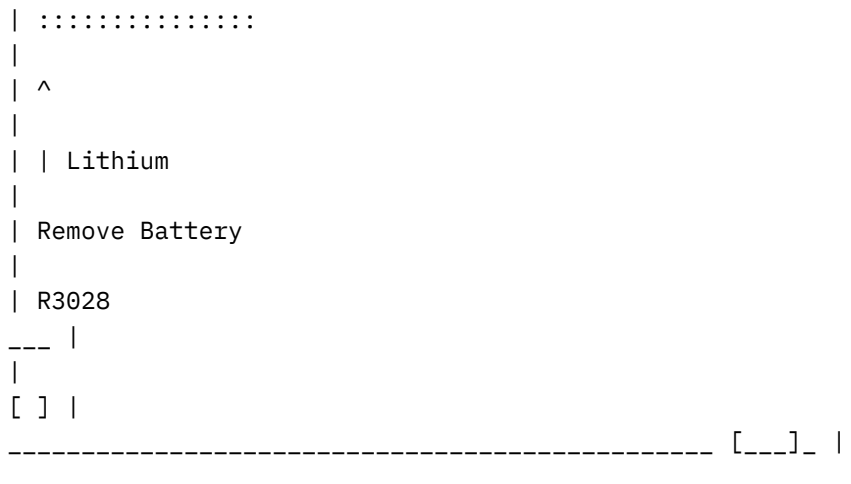
> FT-8000R dual band radio. I almost looks like none exist. I can't
> believe that.

I don't have one of these radios, so I can't confirm that this mod works,
but it was published on a mods website.

The FT-8000R Expanded TX Mod

Behind the front panel (LCD Display) of the radio were the
Lithium battery is soldered. You will see a PC board similar
to the one below. There is a row of 15 jumpers. There is a
larger component on the 4th and 6th position from the left.
If you remove the component at the 6th from the left position
and reset the radio you will have expanded TX. This does not
open the cellular block on the radio. It may be controlled by
one of the other jumper locations on this row of 15.



Mike Connector

Any feedback on whether this works would be appreciated. Perhaps this info
will help you find the cellular expansion.

Jason. JWiebe@bigpond.com

You need a "waveguide-to-N-transition"
They're darned expensive new.
You may find one surplus -either standalone or
inside a box of microwave equipment of some sort.
Other solution is use blowtorch/hefty soldering iron
+ hacksaw etc. & make one.
Or find a friend talented in the metalwork department
& have them do it !!

Message-ID: <01bc564b$a360d760$71415ba5@default>
Source record: 176394

look in the manual under memory masking page 31. You "mask" the memory
without removing it. The procedure is hold the function key for .5 sec
while on that memory, then press mr. The display should change to ch-1.
For all purposes, the memory is erased. It can be restored if needed.

From: AL7OQ <mfeldmn@ibm.net>
Message-ID: <33689EF2.6152@ibm.net>
Source record: 176396

I have for sale an Icom IC-740 in excellent condition, with the
following options/accessories:

Internal Power Supply
FM Unit
Marker Unit
270hz CW filter
Upgraded SSB filter
HM-10 scanning up/down mic.
Service and owners manuals

I have the original box and packing. In it's tie, this was Icom's top
of the line, and still has an excellent receiver by anybody's
standards. It is *not* general coverage, strictly 160-10 meters,
including the WARC bands.

Price is $550, including UPS domestic shipping. Due to previous
experience with less-than-honorable hams, payment is by money order or
cashier's/certified check only.

Relatively poor performance on FM broadcast band. You can understand what
is being said or sung but it's not pleasant to listen to. The wideband FM
was optimized for VHF television which sounds much better than FM
radio broadcasts. In my opinion, this was a poor decision on Yaesu's
part; however, I don't regret purchasing my FT50R one bit since neither FM
broadcast nor TV reception weren't high on my list of features.

2490. Sony SW-77, turn on problem...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-01 00:00:00 UTC
From: Costas Spanos <spanos@eecs.berkeley.edu>
Message-ID: <3368F032.41C67EA6@eecs.berkeley.edu>
Source record: 176403
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.equipment

I have a Sony SW-77 that has had a peculiar problem since I
got it, new, as a present less than a year ago.

Most of the time, when I first turn it on it appears to be into a "mute"
mode. It sounds as if the first RF stage is off and the radio barely
receives anything. The problem goes away if I hit the "scan" button, or
if I quickly cycle the power button. Sometimes the problem goes away if
I simply turn the frequency encoder.

Anyone seen this problem before? Should I send the radio to Sony for
repair, or is there a simple fix I can do myself? (I have the service
manual).

(BTW, this is the updated version of the SW-77 with the long antenna).

thanks!

Costas

There are many relays that actuate around 20mA. You could probably
drive one of these directly from a printer port line. You could even
parallel several lines together in order to get the current you need.
Don't forget the back EMF clamping diode across the relay coil no matter
which option you decide to use!

Good luck,

Source record: 176407

May 1, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

You can drive a transistor with the voltage from the port, and the
transistor can run the relay. I do not recommend trying to drive the
relay on the current supplied by the port, provide an external supply.
A 2N2222 will work fine if your relay uses less than 800ma.
You should probably connect the port ground to the power ground.
Heres how you would connect the transistor.

I have not heard anymore info about the Yaesu Radio you mentioned
however, about 3 months ago I got a hint about a similar radio from
Yaesu to be
announced by the end of the year. It seems that all my sources have
"dried up". I plan on getting the Icom 706 Mark II if the Yaesu rig
doesn't show up by August.

2508. Lithium-Ion Battery in a Standard C508A??????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-01 00:00:00 UTC
From: miker <mreiney@NOSPAMhevanet.com>
Message-ID: <33694250.3319@NOSPAMhevanet.com>
Source record: 176421
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Problem: Standard C508A works very poorly on NiCd batteries.
At 3V, the power is about 1/4 watt. At 2.4V it's about 60 mW.
NiCd batteries just won't cut it.

So, I thought I'd put in a Lithium-Ion Battery.
I'll use one cell and leave the other empty.
If I charge it at 100ma and limit the charging voltage to 3.5V, I won't exceed the rating of the transceiver.
According to the curves I've seem published on the web, I can get about 80-90% of the capacity between 3.5V and 3.0V. One Li-ion cell is about the same mAH capacity as the NiCds. Battery life is not an issue. Just need a little more than 60mw out.

Any flaws in this logic?

Anyone know where I can buy just one AA Li-ion battery at a reasonable price?

Thanks, miker

I also used a "Mirror Bracket Clamp" of a Radio Shack variety on
my swing out spare tire. Works for HF whip fine and pretty well
with longer two meter type antennas. I use a Hustler quick release
on it for convenience. As a note, after a while I happened to see
that the swing/hingge had nylon bearings (oops?) - ran a ground strap
from the bracket down to the main chassis.

While this is not a RADIO, it is the type of toy that amateurs
would, and probably have, enjoyed.

I have an 'Atom Smasher' that I got for christmas when I was about 10
(that was about 35 years ago). It is a 10" Van de Graf generator that
was sold by Lafayette Electronics in the early sixties. I am interested
in hearing from anyone who has owned or does own one.

The one I have still works great. But I need a new rubber belt for it. I
tried a 5/8" x 7" pale crepe rubber band, but it is too long...I have to
elevate the tube by hand to place enough tension on the belt to
get the motor to drive it. Anyone know where I can find a 5/8"
x 5" pale crepe rubber band to try?

Hello all,

I have a new in the box IC728, purchased in February, along with the AT160 auto tuner, UI7 AM/FM module, and the FL100 500hz CW filter.

This is a full featured 100W rig, 100Khz to 30Mhz, triple conversion receiver, AM/FM/CW/SSB, passband tuning, speech processor, programmable tuning steps, NB/PreAmp/Attenuator, the works. All in a compact package.

I paid $1650, asking $1250.

All items are new, in the box, and complete.

Thanks es 73's,

I've got a Yaesu radio and it works good without mods. Do you have poor audio? Are there spurious emissions? Maybe you want to disable the TTP until you use the PTT switch. If I'm not careful when I grab the microphone, it sends a tone or two. Best of luck improving your radio with mods, Brian.

Generally, if you just purchased a new radio, they include an operations
manual with them. I would consider looking at it for information. And
I'll bet there is absolutely nothing in the manual about it being pulled
from the shelves.

Anybody figured out how to solar charge one? What panel, charger, adaptors did you use?

Opinions on an MFJ portable 3-element yagi vs. a pocket roll-up for remote use? We'll be using the radios at 154.60. I need the most bang for the buck (in terms of weight and bulk).

Also -- can the supermod be cloned to another FT-50 or do you have to use the PC software to get the "mother of all mods?"

I've heard that Omega holds a patent on this device, and has been
aggressive in blocking infringers. Radio Shack sold a talking meter for a
while, but was forced to stop distribution by Omega. You'll either need
to find a used one, or break down a pay the Omega price. Then again, you
could always make your own...

Hi All;
I have for SALE: TENTEC 540 XCVR, analog, w/matching supply with ammeter on the front. No manual, have a hand mike, Some ares have been re-stenciled on the front panel but otherwise the radio is fine w/full power out,
Price is $215-shipped UPS CONUS.
Thanks es 73........RICH RLUCCH2098@AOL.COM

2534. HIGH POWER TRANSMITTING TUBES FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-01 00:00:00 UTC
From: norman <norsan@bright.net>
Message-ID: <5k8vvk$2tj@cletus.bright.net>
Source record: 176499

Eimac type YC156. This is the same basic tube as a 4CX5000. It was designed for the medical industry and has a rating of 6500 volts at 4 amps when used in a pulsed mode. The tube was used in applications to 35 mc but will operate at higher frequencies. See the data sheets on the 4CX5000. No socket is necessary for this tube, it will mount in a 3 1/2 inch diameter clear hole, and the grid ring will bolt to the chassis. Height overall is 8&#65533;.Tubes are used but emission is guaranteed for full output. $325 each.

Er, Hi...

I have done the standard TH-79A mod a radio (removing D304, D307), and have the 2 new menus (19 and 20), but cannot seem to tune below 118Mhz. I am assuming I have to change the VFO limits (menu 13), but it won't go below 118. Is the mod for the 79A(D) differant to the 79A?

Source record: 176510

Sam,

I have done just that - and used it for about a year. It works very well. In my QTH I have a lot of noise, so the noise blanker on the 735 is always in. It *does* give me some problems when strong stations are close to the listening frequency.

The other thing you have to be carefult with, is to reduce power before transmitting. I have my Icom adjusted down to about 5 watts output, but I also use the rig on HF and occationally forget to turn the power down. Other that the smell of over-heated resistors, the 1208 seems to take 100 watts for brief moments rather well.

With the preamp on the 735 switched in, you can read signals down to about 0.1 microvolts.

I am considering modifying the transverter to give a signal to the IC-735 ALC so it automatically reduces power when transmitting. However, it is a future project.

A bug is easy to change to a keyer paddle.
The dot contact should have a separate lead so that you have the necessary
3 leads to the keyer.
Place a soft bumper, (sponge), to stop the dot vibrating action and, yet,
still allow dot contact.
Now you have a keyer paddle.

From: dbwells@nospambots.concentric.net
Message-ID: <3368216c.3084453@news.concentric.net>
Source record: 176513

Has anyone heard of a new Yaesu mobile HF rig that will supposedly use the FT-900 case (and maybe a lot of the internals), but have incredibly wide coverage (HF plus 6 meters, 2 meters, and possibly 70 cm and/or 220 mHz). I saw one posting on DejaNews that suggested rumors of such a rig, and wonder what's known. How expensive would it be, would all those bands be complemented by some sort of DC to Daylight recieve bandwith (I'd assume at least general coverage from 160 meters up to 70 cm),and when would it be available. I like the design of the FT-900 better than the IC-706, but I'd like the HF plus 2 meter all mode capability of the 706. 70 cm would be a nice bonus,too.

The CTCSS decoder acts as your receiver's squelch when engaged. It isn't
something which reads out a tone frequency (though there are units which
can do that too). You set the tone to be decoded to match the one the repeater
your are monitoring transmits.

Most tone accessed repeaters, and even some which don't require tone
access, also transmit tone. So if you have a CTCSS decoder in the radio,
your receiver's squelch will only open when the repeater is transmitting
and the selected tone is decoded by your receiver. It *won't* open for pager
crud and other IMD and overload on or near the channel frequency. This
makes monitoring the repeater much more pleasant in those "intermod alleys"
most of us have to drive through every day.

Note, most repeaters won't pass through tone from user radios. The tone that
they transmit is generated by an encoder installed at the repeater. This is
usually, but not always, set to the same frequency as the tone needed to
access the repeater.

Having tone on the repeater output is a very good idea, and is beneficial whether
the repeater requires tone access or not because it helps out those monitoring
the repeater in those intermod alleys. Locally, we encourage all repeater owners
to install a 100 Hz output tone on their machines for this purpose.

Tim,

I've read where operators will have a base station at home set to a desired frequency and have the ctcss decoder installed and set. When someone tunes to that frequency and keys in the specific tones, the decoder will sense the tones and open up the squelch on the radio, allowing the transmission to be heard.

Say I have my base station set up (or scanner for that matter) turned on at home so I can contact my wife. But, she doesn't want to hear all the other garbage all day. Well, when I want to talk to her, I turn my radio on to the desired frequency, key it up and key in my access code to my decoder on the base station (Kind of like dialing a 4 digit phone number). That done, I call my wifes call sign and she'll hear the radio and answer me.

Basically, we're using the radios as a telephone. You can have your radio on but you won't hear anything until someone dials your number.

How that clears things up a bit....

IS the pinout on the mic jack on the 2400 and the 2500 the same?
This info is necessary for packet operations. Just wondring if I have to make
a different cable.

My htx-204, with both mods in place, cannot "listen to cell calls." Unless there is some other mod that I haven't heard of (and I've done some research) the cellular telephone freqs are completely blocked. It will, however, transmit out of band as you state. I have performed a system reset on mine to keep it from doing so accidently (the extended rx mod is separate).

Source record: 176333

Hi-
It is amazing how subjective these things are.
I started the Ic-756 reflector, and I've seen it all.
I spent the day at the dealer..with all the specs in my head.
IC-756...TS-870...there was also a IC-775dsp on deck.
I wanted to like the 870...I tried hard to like it...
But It just felt wrong. It felt like the "first try" in
IF DSP. Access to menus and adjustments were difficult..
the RX sounded "mushy" in SSB..and I was worried about the
lack of filter add-ability in in the RX..meaning that at least
3khz of signal energy would pass through the RX in CW mode.
(talk about AGC "blocking" from "near audio" DSP)
The IC-756 on the other hand sounded crystal clear..like
a CD compared to a record..and a record played on one of
those big console stereophonic units. Digital signals were
super clean...and the scope was like getting "sight" for
the first time. Its cool AND useful.
Yea, the unit has some design problems..but no more than
any of the other rigs that have come out. You only have to
look at other rig's reflectors..like the highly regarded
FT-1000MP for example...folks were dealing with spurs on 160
and all kinds of crap that Yaesu took care of soon after.

The IC-756 is an example of a modern HF rig geared to the
average user..like me...and it sounds great all around.

Whatever!

>
>Hello all,
> Got a problem with my Baycom packet modem. I've used it for a
couple
>of years without problems, and then suddenly it started putting out bad
>QRM on various frequencies
>- Dan, N2PRC
>
>dgravatt@falcon.cc.ukans.edu

Hi Dan..
First thing I'd check is the circuit grounds. Look for any wires
that may have come loose, and check for dry joints. Aslo check the sheilding
of your cables to and from the modem. The only other thing I can think of is
maybe parasitic oscillations from the oscillator? Grounding the metal case
of the 2 MHz xtal can sometimes cure this.
The AM7910 modem is usually very quiet when it comes to RF noise so
somethimg is surly astray. Have you tried checking the interference with the
computer off and just the modem on? This would be a good idea if you
haven't, otherwise it may not be the modem at all!

Hope I've been some help..

Best regards de Graeme.....

From: wbickle@ix.netcom.com
Message-ID: <336a1e07.18810768@nntp.ix.netcom.com>
Source record: 176336

Any help in addressing the following would be appreciated:

The scenario:
We're re-commissioning a Nye-Viking tuner which has not been used in some number of years. It seems the tuner is apparently incapable of reducing SWR levels much below 2.0, and in no case below 1.5, on multiple bands. The impedences to be matched are "reasonable", as the built-in tuner in the Kenwood HF transceiver we're using with this tuner has no trouble at all in achieving 1.1/1. An older Dentron tuner, swapped into the same set-up, also achieves a near perfect match.

A brief inspection of the interior of the N-V tuner reveals nothing out of the ordinary. It's clean, there's no indication of loose or broken parts, no sign of arc-overs or other damage, etc.

Any advice/suggestions would be appreciated. I'm stumped.

One of the most complete link systems around is in use by the Evergreen Intertie in the Northwest U.S. I don't remember the URL directly to the people who build it, but (not to make you jump through too many hoops) first go to the Saturday Morning Swap page, use the link to the Evergreen Intertie, and from there look for a link to Lloyd i/o or to Frank, WB7DZG. The address (the only one of these I know by heart) for the NW Sat Morning Swap Net is www.chatlink.com/~rickt/swap.htm

Hope it helps,

Ron, N7TAW

Unfortunately, the AM7910 modems have all been tremendous noise
generators, often landing right on the desired frequency. You might try
2 or 3 different crystals in the board to see if the noise will migrate
away from your desired frequency. The AM7910 and internal clock
circuitry generate lots of noise no matter what you do but hopefully you
can move it sufficiently to find a usable "hole" in the noise output.
Interestingly, the "earlier" modems using XR2211/ XR2206 IC circuitry
are relatively clean from such aggravations, mainly since they use no
internal oscillators etc. with which to generate spurs of noise up and
down the spectrum.

I can must disagree with Len . I have owned both the 870 and the 756. I sold the 870 after a comparison to the 756. The dsp in the 756 is better in one main respect you can not use the automatic notch filter and noise reduction on the 870 it is one or the other a major short coming! The 756 allows both. The dsp in the audio or if is a mute point as both the 870 and the 756 dsp systems are outside the AGC loop and AGC pumping is noticed on both. You do have the ability to use optional filters on the 756 tho only one for each if. The filters are far superior in shape and un wanted signal reduction vs the the DSP system used by Kenwood see the respective reviews in QST. They are very different radios and neither is "crap" as was so objectively put by another reply!

Tim,

I have one, and I also have an ICOM 756. I'm trying to send back
the 756,

it's a piece of CRAP, but the 870 is a JOY to operate. I have the
voice

module (I think it's a VS2 which is the only accessory) and it's fantastic.

I'm currently using the 756 as a bandscope for the 870 by looking at the

8.3 Mhz IF in general coverage mode.

The 870 voice message keyer is great for contesting and pileups, the

selectivity is beyond imagination, and the overall "operability" is very

high.

It's lacking in only two things I can think of. One is no dual RX

capability for split operation. The other is that the extra antenna

connection isn't used as an input and you don't get automatic selection

between RX and TX of the other two jacks. For example, if you put
up a

beverage antenna and want to use it on RX and automatically TX on a

different antenna, the 870 (apparently) will not do this. You have
to do

it manually by pushing a button.

Whatever you do stay away from the 756. They are in big trouble with
this

rig. Their "DSP in the IF" turns out to be the pick up point for
their

audio to the audio DSP (prior to the AGC), and major trouble is brewing

over this issue and others. I doubt the right will be around for
more than

6 more months.

Assuming you installed a new battery, check the swr with a dummy load in the straight thru position. The calibration adj pots on the back bottom (MB-V-A?) are from left to right, swr, hi-pwr, lo-pwr, and power switch-over adj. Then to the right of these four and slightly higher is the swr bridge balance (capacitor) under the plug. Obviously you need some standard to adjust these. Do the balance first and check the calibration against with say two dummy loads in parallel for a swr of 2:1.

> Good luck,
> ===sh===
I'm always paranoid about hooking stuff directly to the parallel port.
Doubly so if it's a $2K laptop. There are all kinds of transients
on the power lines that can get coupled from one device back thru the
parallel port of the computer. Wherever possible, use an opto-iosolator
or isolated solid-state relay. It'll cost you an extra couple of bucks
but might save your computer.
If you must use a transistor, use a fet with a big gate resistor.
That way, if the transistor shorts, you have plenty of isolation
to the port.

Bill,

What is your SWR meter like? I assume you are using the Nye-Viking's internal meter. If it's not balanced, it will erroneously read SWR values higher than actual. Most of those built-in meters have a small variable to null out the reflected power reading when operating into a 1:1 load.

Try transmitting into a dummy load in bypass mode of the tuner and adjust the variable for zero indicated ref power.

Good luck.

R,

Al W6LX

Hi Jeff.

Start by checking out the Link Communications web page at (I believe)
http://www.link-comm.com and that will give you a start. From there
you can download the manuals for your selected controller(s) and do
your research. Our club has an RLC-4 and it has been a very solid
performer.

Good Luck!

Yes, they'd be OK in the sense that the FCC regulations I mentioned
don't forbid it, but the older radios only tune to about half the channels
of the new ones, so they may not be as good a choice as a scanner
for that purpose.

I have AOR AR-8000 for sale. Radio is in great shape, has the scout mod
and the floating birdie mod done at the local radio shop. I also have the
Murata Erie 7.5 and 10 filters for the audio clipping mod but never did it.
I have all docs and box. Also have the AR8000INF computer interface that
I will sell with it.

Asking $575.00 including shipping in the USA

I just picked up a couple of what look to be commercial vhf
radios and I could use some help tracking down more info. I have
only the main unit for each and not the control heads. They
appear to have been made by "Communications Power Inc" from
Sunnyvale, CA. Model number "CP2500 REMOTE" Serial number 8F090.
They look pretty well made - maybe late 70's era.

Does this ring a bell for anyone? Any info is welcome.

Thanks & 73,

Fred, KF9ZI

I read about the option of having a CTCSS decoder as an option in most dual band HT'S. Does this mean that if you are listening to lets say a taxi dispatch or police radio and or a repeater that the radio will show what PL tone is being used? I thought CTCSS or PL tones were only transmitted in the transmission part of the conversation not the reception. (I am talking about repeaters exclusively). I do understand that you can use these tones if there are alot of hams using the same simplex frequencies. Is there another use? Possibly the one's I stated earlier? Thank you.

: (BTW, this is the updated version of the SW-77 with the long antenna).

: thanks!

: Costas

Yes, I bought a SW-77 that I hoped to use for recording programs with
its excellent timers, but quite often would have the same behaviour,
making it useless for unattended recording. I ended up returning the
radio, so I don't know if it is repairable at all. The shop I bought
it from tested it, and of course, it didn't do it for them, so they
didn't believe me, but I did return it within their time period. This
was a shop in Dallas, TX, so I bet it didn't end up in your hands!

Other than that, it was a great radio.

good luck,

Sam Pool

2625. HTX-202 error 2

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-02 00:00:00 UTC
From: Jeff Kilgore <kilgore@dev.tivoli.com>
Message-ID: <3369F78A.1366@dev.tivoli.com>
Source record: 176463

I bought a Radio Shack HTX-202 a few days ago, and so far I really like it. The only problem seems to be that I get occasional error 2 message (PLL unlock). So far this has only occurred when using a 8.4V 1800-mAh battery and a replacement antenna. It does not occur with the stock 7.2V battery pack or with the stock rubber duck antenna. I assume some RF is getting into something and causing the problem.

Has anyone experienced this problem? Is this to be expected (I know the 202 does have its shortcomings) or is this perhaps a defect in this individual unit? Any information is appreciated.

73,
Jeff, KC1MK

I called a similar device in the November 195 QEX
a "10 GHz SMA to WR-90 transition." Often, I'll
shorten it to just WR-90 transition, since SMAs
are by far the most popular connector at 10 GHz.

Keep in mind that the flanges can vary...

Also, there are a few numbered transistions, like
the UG-40B/U and UG-446A/U, which are a WR-90 to N females.

The 40B has a choke flange, which should only be mated
with flat flanges like the 446.

No. However, some HTs (my AT-600, for instance) is capable of scanning a received signal and detecting the PL tone being transmitted. This feature is useful when you want to hit a repeater you don't have any information about.

> I thought CTCSS or PL tones were
>only transmitted in the transmission part of the conversation not the

You are correct. PL tones are not transmitted during reception. (!)

> (I am talking about repeaters exclusively). I do
>understand that you can use these tones if there are alot of hams
>using the same simplex frequencies. Is there another use? Possibly
>the one's I stated earlier? Thank you.

The CTCSS (or PL) Decode function is used for several purposes. It can be used in conjunction with the Cross-Band Repeater function in the same manner as a full-fledged repeater, or it can be used in conjunction with the Code (Tone) Squelch feature, where the squelch is broken only when the tone is heard, thereby knocking out all the other chatter on the frequency. I think there are one or two other things I can do with the PL decode, but I haven't used them and I can't remember what they are.

2634. RE: HTX-202 error 2

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-03 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <970503151128135 20@atdbbs.com>
Source record: 176222

ER2 indicates a PLL unlock. The radio gives this error if the PLL alignment is off or if the transmitted signal interferes with the internal PLL frequency. This error has been reported most frequently when using the supplied "rubber ducky" antenna with either a high-power battery pack or with an external DC source.

According to Tandy, the fix for this is to use an external antenna when using external DC power. The memo goes on to say that if the problem persists, send the transciever to the repair center.

Jeff, KC1MK

Hi Jeff,

Common problem, the Radio Shack does not like the hight voltage. There is a regulation for the top 12 volt input but the bottom has little to nothing, you can build a better regulation circut into the bottom. I did on one, but for the gain of the larger battery it was not worth the effort. There was no real output gain at all. Be carefull I have heard of three people having this problem with the 202's when using the 12 volt cig. plug in Chrysler products, the chrysler regulators are rather slow in the older models and peak has high as 22 volts at times which will also trip the error 2.

Hope this helps.

>
> 73 de KB9JTT

As I recall from talking to my Aviation Repairman about the radios in my airplane, your statements are misleading. First, the regulation is from the FAA, not the FCC. Secondly, the regulation specifies frequency tolerance. While all of the radios with twice the number of channels meet the regulation, many of the older radios do not. It happens that the 300 series radios in my 1977 Cessna both meet the regulation; one is a 720 channel and the other is a 360 channel. Whether a radio meets the regulation depends on the particular model in a series and not how many channels it receives.

Regards,
Dave

There's nothing you can do until the FCC is willing to assume their
responsibilities and enforce the law. They haven't done that in a good
while now and probably won't ever again.

I am the "new" owner of a TS-520 Kenwood rig. I have a weird problem in that the VFO sometimes changes freq by itself. I'll be listening to a radio net when the freq will go off so I can't understand anyone in the net without retuning the receiver. I have tried to find a loose shield etc but to no avail. I have tried taping on the chassis etc but can't force the freq to change (its very stable except e\when it wants to change). Any ideas from Kenwood experts out there. Thanks a bunch :)

True, but even 20mA seems large. Com ports really aren't meant to handle more than 10mA. I found a 'reed relay' at Radio Shack that does the job, though...

> the one's I stated earlier? Thank you.

It is possible for a radio to use a receive-only "PL" tone, as well as a transmitted PL tone. The benefit of a receive-only PL would be that the radio would stay silent until/unless it receives a transmission that has the correct PL, then it would open and let you hear whatever traffic you want to listen to. This used to be very common in business repeaters, where several organizations shared one repeater but the overall usage was very low. In most of those cases, the mobiles had a special microphone hook that had 1 or 2 wires going to it, or in one case, if the button on the back contacted chassis ground, as long as the microphone was on the hook, the radio would open only with the correct PL. Once you unhooked the microphone, it went to a normal squelch. You listened for a couple of seconds to see if there was any other traffic, then you talked, knowing that others on the same frequency but different PL's usually didn't listen to you (unless they had their mike's off the hook or were being nosy :-).

There are many amateur repeaters that one has to have the correct PL to access the repeater. I have no idea if there are any multiple-PL-able amateur repeaters in use - it's certainly possible, but not very feasable.

Hope this helps,

Ray

No, but I'm thinking about it. My 2-year-old rechargable pack apparently
has a shorted cell in it. I'll try "de-whiskering" it tomorrow, operating
on Rayovac Renewals with the standard pack for now. I need to research the
lithiums and metal hydrides out some more.

> following the assembly manual word for word. Did anyone have any trouble
> putting this together? Any suggestions?

I bought and put together their # 1209 2m <> 6m transverter kit. I'd say
it took me about, oh, 8 hours to "stuff" it. Biggest problem was positively
identifying the capacitors, and I was short a couple and long a couple.
Eeh. (I work in the electronics shop of a hospital, that was not a
problem!) Had it all together, received fairly well without even aligning
it. Tried transmitting, couldn't get more than 50 mW out of it. Returned it
to TenTec for evaluation, they determined that I had blown one transistor
(wasn't a CMOS, either), and they exchanged one capacitor to let it work
better on SSB and _aligned_ it for me, AT NO CHARGE!!

If your book is like the one I got, it is very well detailed, and it
would probably be best to follow it exactly, especially if this is your
first kit. :-)

> Has anybody else had this problem?

I don't have this particular radio, but something is definitely wrong with it if it's draining 4 mA when it's turned off. My first guess, don't laugh, try looking at it in the dark, maybe something's happened to cause it to turn on one of the LEDs for the display? Don't know what else could be wrong with it, if the switch is OFF and it's still drawing power, you have a sick radio on your hands.

I have a S-53A that I also need to start restoring, it belong to my late grandfather, I remember playing with it 30+ years ago. (sigh)

Anyways, I'll wager that you just plugged it in and tried turning it on. How long had it been off, a couple of years? (Not chewing you out at all, just asking) My guess is that the old paper capacitors have "deformed". Someone in a FidoNet ham radio msg. group mentioned that one trying to restore an old radio needs to take it in stages, using a variac (variable transformer). Set the variac for 25v, connect the radio to it, turn it on and let it set for a couple of days. Then carefully bump the voltage up to 50v and let it set for a day, then 80 and a day, then regular line voltage. That should work. If not, you (and probably me, since I haven't done it yet) will need to start replacing some capacitors. (sigh)

May 3, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.
For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

2659. Re: Mobile CW Keyer Paddle

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-03 00:00:00 UTC

Most CW mobile ops I work have a paddle mounted somehow in the car. They send good CW so it must work OK. I have never tried this method. I wanted a better way for me and so the mouse was born.

I have been using the mouse for over 3 years now and don't think I will ever go back to a paddle. Although I started using it when I first went CW mobile, I soon found it worked great operating reclined in my big easy chair at home...CW heaven HI.

Here are some reasons why I find the mouse key better for mobile:

1. No mounting required.

2. Doesn't disintegrate into 10 pieces if dropped on the car floor. (Or kill/crush your toes in the fall for that matter)

3. Easy to store, just throw under the seat or in the glove box.

4. Contacts (microswitches) stay clean under dirty mobile conditions.

5. Cheap: $1 to $2 for dead mice at swapmeets. No tears if damaged or lost as there might be for your $70 Bencher.

6. Great QSO material: Your keying with a dead what???

Making the mouse is easy. Find one with easy pushing switches. Microsoft is the best I've found so far. Remove the guts, all you want are the switches. In some mice you may have to isolate the switches by cutting the circuit board foil as the switches are mounted on the circuit board and not the mouse body. Then wire the switches the same way as your paddles are wired to your keyer. In mine the left switch/button is dots and the right dashes. You can use the mouse tail wire as it is, just isolate the extra wires and put the appropriate jack for your keyer on it. That's all there is to it!!

When keying I use my index and middle fingers. I practiced for a few hours before I went on the air. It came pretty quick.

If you want to get fancy I think you could build a keyer right inside the mouse. I haven't tried this yet but may. Also if you use a 3 button mouse you could wire the center button/switch for straight key/tuning duty. Improvise, that's the name of the game.

IF you have a January 1996 QST laying around there is an article about the mouse in Hints and Kinks.

Ok, I guess that's more than you wanted to know.

>>Tell me which NG you're on and I'll do some trimming; in the meantime,
>>got any DX news to share with us?

>Jeffy,
>Nice spam job, do you do this alot, or just when you loose an argument?

Again, tell me what NG you're on and I'll trim the headers you initially
placed at the top when you started calling Burt names. I count 6 NGs
you posted your Burt-attacks to. How am I supposed to trim if I don't
know where you're at? Come out of the NG closet! I'm currently on .misc.

>You threaten some guy on .swap

He sold me a bum modem - I gave him a choice to refund my money or face
postal fraud. What did you interpret as a threat? What would you have done?

>and when you get called on it

No one took exception except you.

>you raise the all mighty news group charter.

Yep. No followups should be done on .swap - they're supposed to go via
email - that's why I redirected my followup to you over to .misc. You
apologized last week but now you've reversed yourself.

>Face it Jeff you're just a control freak

Hey, that's not nice! Don't be so mean-spirited, Jerry. At least I'm
not threatening to go to go to Burt's net provider as your are.

>a nebulous existence on the net but be my guest. However there
>are people who, unlike your poor students, don't have to take your crap
>and won't.

Why are you so being so mean-spirited, Jerry? Go have a beer and watch the sunset. Life's too short to be hostile.

So what's your latest project? Building any radio-related gear? I just bought a WRL Globe Scout transmitter (for $25!) - I can't wait to string a 160m wire and see what I can do on that band from out here in the middle of the Pacific.

Have a fun weekend,
Jeff KH2PZ

Another good solution is the MFJ keyer/Bencher paddle combo.

It's small, powered by internal 9V battery, and can be positioned anywhere on the passenger seat. It has enough weight that it wont move. I've never had a problem with the unit moving off the seat when braking.

I use a lap desk on the passenger seat with mine. It's also easy to unplug and move between the shack and car, or hide in the trunk when you stop.

$329 - Connect Systems CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). 90 speed dials, two level safety codes. Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed at base. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with fancy base antenna, more height or an amplifier. With permission, just tune the rig to a wide coverage repeater (Club could run this patch from a home). Connects to any rig so use it with a low cost spare 2m (220 or whatever). Multiple volume adjustments (mobile to land,Land to Mobile,CW volume,regenerated DTMF volume ect.),and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, you are the control operator. Plus a long list of other professional features. Plus, with a cross banding rig in your car, you can go all over town making AND receiving calls on simplex with your HT on low power 440! Set it to ringout, send DTMF code or use a silent PL tone to your HT. You can even set which rings to rings out on. Imaculate

All of the 'CB' amps-Texas Star, Palomar, Messenger, etc. etc. all work on 10. From what I have seen, though retailing amplifiers capable of amplifing signals above 15 meters is illgal (a lot of strings to that rule, I know, but I'm trying to keep it simple).

However, it always says by every ad in catalogs I've seen that the seller (AES, HRO, whoever) will give you instructions to modify for 10/12 meter use upon receipt of a copy of your current, valid ham radio license.

73,
Mike

It does not matter who you report the "illegal" act to, nobody cares,
and nobody will do anything.
This is the way ham radio is today.

2683. For Swap Pro 26 (20-9506) OR UBC 220 XLT

I am looking to swap ONE of the models in the header for a 2m/70cms or just 2m transciever,or an alternative swap would be for a nightvision monocular scopethe Pro26 covers 25MHz - 1.3GHz with NO BREAKS AM NFM & WFM 200 memmories 10 banks with 10 monitor memories and priority features (4 months oldish)

The Ubc220xlt is 40ish MHz - 900ish MHz with breaks 200 memories 10 banks not sure of age - Both pick up cellular frequencies and work! the pro26 runs on normal batteries and still has box with instructions, the Ubc has photocopied instructions and has rechargeable batteries but no charger.

Please excuse the cross-posting but looking for 2 different items made it necessary to do this - TIA

Any interest please remove the 2's in my address
regards
Paul (G7URB)

2684. Using FTV-250 with FT-890

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-03 00:00:00 UTC
From: wlfuqu00@pop.UKy.EDU
Message-ID: <199705032051.QAA27347@pop.uky.edu>
Source record: 176305

I have a FTV-250 (2 meter transverter) that I want to use with my
FT-890. Has anyone had any experience with using this transverter
with a more modern transceiver. It requires a separate transmitter
output and receiver input from the transceiver and also only needs
milliwatts of drive.
So far it seem that I need a relay, attenuator and connect up
the ALC to the FT890. May also use the FT-890 tx exciter inhibit
to prevent it from transmitting before the antenna relay has changed to the
transmit position.

Hi,
Name is Gary,
I have a yaesu ft-8000 that I run mobile,
I get great signal reports but I have problems recieving without getting
a whole lot of engine noise. It seams to be only on the recieve end.
I have hooked radio directly to battery and have a inline noise
filter also.
anyone else experiencing this type of problem?
I have a newer toyota if that makes any difference.
any help would be appreciated!

>Have fun!

This is the correct mod for the older FT-530. I've seen most of the
newer ones have a single green wire which you will see after you
remove the battery slide plate. Each end of this wire is connected to
the solder pads referenced above. With the radio on its back and the
keypad up, the wire should be visible as a sort of loop looking into
the radio where the battery plate used to be. A pair of tweezers will
probably be required to grab it and then it should be cut. Reset the
radio as above and you should be ready to go. CAUTION! You may wish
to verify the wire indeed goes the the solder pads!

I put a message out on packet a year and a half or so ago regarding
this, but I guess it never made it into any of the mods databases..:(
If you want a copy, let me know and I'll try to dig it up and post it.

The LK-550ZC is a 10-160 HF Linear amplifier utilizing (3) 3-500Z Tubes in the
Final. It has a separate Power Pac (PAC-5) with a Peter Dahl Hypersil trans-
former 3200 volts @ 1.75 amps CCS. It features a full-wave bridge rectifier, ALO
Grid protection, fully adjustable tuned input, QSK, Jennings Vacuum relay,
Quiet 2 speed Fans. It is in "LIKE NEW" condition with a Bound Manual, original
shipping carton and packaging.
The Tubes are BRAND NEW Amperex 3-500ZG Graphites with less than 30 mins
on them. 10 months warranty left on them, and will be shipped in separate
Amperex boxes.
This Amp will run 1500 Watts SSB, CW, SSTV, RTTY, 900 Watts AM, continuous
duty for 24 hours a day. 1500 ++ if you want. Parts and expertise are availabe
from OMEGA Electronics. I'm selling because I just don't get on the air
anymore.

Price is $1750.00 Plus shipping. Tnx es 73, Van WB0NZV

That's different. That is DTMF signaling. CTCSS is use of a continous
subaudible tone to open the squelch of the intended receiver.

Yeah, probably everyone who has tried to use one at higher
power with an on-radio whip better than the supplied rubber
dummy load has seen this. The solution is to not try to run
high power unless you use an external antenna. As you
guessed, the problem is RF getting back into the radio
and unlocking the PLL.

If you just *insist* on doing this, adding a counterpoise wire
(aka a Tiger Tail) may eliminate the problem. Just connect
a 19 inch wire to the BNC connector shell and let it dangle.
This will also often improve your range, so it is worth trying.

2700. Re: Yaesu Ft-530 Mods.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: Jim Gerke <jgerke@why.net>
Message-ID: <01bc58a7$cbf8e380$c779d3cf@uymfdlvk>
Source record: 176168

BE CAREFUL with mods for the FT-530!

According to mod info I got from Yaesu last year, there are THREE DIFFERENT mods for the 530. Each is applicable to a different group of serial numbers.

Mod 1 is for S/N's xx14xxxx thru xx23xxxx
Expanded RX -- 110 - 180, 300 - 500
Expanded TX -- 130 - 180, 400 - 471

Consists of removing the solder from pad 13

Mod 2 is for S/N's xx24xxxx thru xx30xxxx
Expanded RX -- same as Mod 1
Expanded TX -- same as Mod 1

Consists of cutting the green wire which jumpers pad 13

Mod 3 is for S/N's xx33xxxx thru xx43xxxx
Expanded RX -- 110 - 177, 300 - 510
Expanded TX -- 130 - 177, 400 - 470

Consists of:
Removing solder from pads 1 & 3
Cutting green wire which jumpers pad 13
Jumper (add solder) to pads 4 & 5
(jumpers 4, 5, 6, 8, 11, & 15 are
now installed)

All three mods require you to press and hold both arrow keys while turning on the radio.

These were taken from "The Yaesu Book", Number 4, (a booklet containing nothing but mods for Yaesu radios) dated May, 1996, which I obtained from Yaesu at a major hamfest in mid-1996.

Although these mods may also allow you to tune the 800 MHz range, later versions of the 530 did not have the RF components necessary to receive 800 installed in them. Even though 800 might show up on your dial, these later radios cannot actually receive up there. And besides, you're not supposed to do that anyway.

Have fun.

73, Jim, KC5OA

Bill, be *real* careful using ALC for power control. The power will spike up to
full output momentarily until the ALC can grab it. This will happen at the start
of every syllable in SSB. That could fry your transverter, or at least generate
some real nasty spurious products. The better course is to tap the radio at
an earlier stage to get the low drive power you need. You can disable drive
to the PA by either pulling drive or cutting B+ to the PA.

As some of you may be aware, I have up and maintain a
WWW page with information on various military radio
gear. This is a non-commercial endeavor, and is free to
all -- and shall remain so.

What I am asking is for those who visit the page to take a look
around and help fill in the blanks. There are many pieces of
equipment I have been unable to find information on. If anyone
finds something NOT there that should be, please drop me a mail
at any time via the mail links on the page.

Scanned photos are always appreciated as are scanned schematics.

Your radio links are welcome as well.

I would also like the thank all of you who have used the list and find
it be of value. Much of the original list was handed down from various
folks over the years, notably Bill Beech and Terry O. I have expanded
quite a bit from those original lists, and find the research very enjoyable.

The list so far has close to 11,000 hits since October of 96, and email
keeps pouring in to enflate my ego on the good job done> :-)

Drop by and visit some time if you havent already done so. The URL is

http://telalink.net/~badger/millist/mi.html

Flames and comments always welcome.

2704. Re: Why Are There NO Mods for FT-8000R?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: Jack Summers <va3jak@sympatico.ca>
Message-ID: <336CADA3.3945@sympatico.ca>
Source record: 176172

Of course there are MODS for the FT8000R, they can be easily unblocked, they just won't do 30 or 10 Khz steps for cellular, only 12.5 Khz. Trouble is..... you just have to pose the correct question to the right people or newgroup!

Good Luck

I saw pricing at several Dealer Web sites to be $1350
Assume the price will drop $100 within the next year plus Icom may give
the Separation kit etc. for free to keep the product moving. The first
Hams who "HAVE TO BE FIRST" usually pay thru the nose and are the ones
with the "bugs" in the radios.

2712. BEWARE OF DEALINGS WITH Mark S. Conway

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: wa4vrv@srv.net
Message-ID: <336c8399.647634@199.104.80.6>
Source record: 176180

This is just a warning for anyone who might enter into a deal with
"Mark S. Conway" <mconway@Nantucket.Net>. I am only representing
myself as I have no other data points.

Last week, Mark posted a Kenwood TH-79AD(H) for sale which I responded
to and agreed to purchase. Yesterday, I sent Mark an email asking him
to let me know the UPS tracking number so that I could have the money
ready when the package arrived (see, the deal he posted included
shipping, but I asked if he would ship COD and he agreed.) Its a good
thing I didn't go out and get a money order or send him a check!!

So, he replied later last night with the following:

Date: Sat, 03 May 1997 19:22:07 -0400
From: "Mark S. Conway" <mconway@Nantucket.Net>
Organization: Nantucket Net
To: "Jay C. Greenberg" <wa4vrv@srv.net>
Subject: Re: Kenwood TH-79AD

Jay, Please don't be mad, but someone local here just bought it.
Sorry for all the trouble..... Thanks, Mark

Here are the original email's between us for anyone who cares to read
them:

Date: Thu, 01 May 1997 12:19:44 -0400
From: "Mark S. Conway" <mconway@Nantucket.Net>
Organization: Nantucket Net
To: "Jay C. Greenberg" <wa4vrv@srv.net>

Hello everyone.
With my recent retirement, getting back to
on the air more often now. I am in need of a
new HF base rig. Am looking at used Ten Tec
Omni V, Paragon and Icom IC-765. Just can't
make up my mind to pick one. Please help
me decide by responding privately. Or should
I plunge and buy a brand new radio such as
Yaesu FT-920 which is coming soon? My goal is
value for the money. Brand name or New don't
mean much to me. BTW, my main interest is CW DXing.

Message-ID: <862782340.1022@dejanews.com>
Source record: 176184
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

I have an unused Heil Proset-5 headphone/microphone set in original box with manual that I would be willing to trade for a 2 meter mobile amplifier. The headset has 1/4" and 1/8" plugs for phone/mic, respectively. The amp must be in excellent condition and work properly. Am also willing to trade for something else. Just Email me. Thank you!

The easiest way to find out stuff like this is to write down the patent
numbers
and read the patents. There MUST be full disclosure of the technique!

Not ham radio, but the FCC.

But no big deal, really. In the big scheme of things in the government,
this really isn't a super priority...

Super cheapo way to do it: 400 Hz audio osc, then 12 Volt crapo import car
audio amp brick, then 12 V fil xformer backwards. Adjust "volume" pot for
90 Volts under load.

PS, a cap and you have "3 phase" if you like to play with servos...

Message-ID: <01bc58de$f5a8ddc0$0b8f099a@sw>
Source record: 176191

May 5, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.
For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

> I finally broke down and drove to our ham radio store and
> bought the yaesu plug.

Phillip: By "the Yaesu plug" do you mean the E-DC-6 plug with cable attached, or is there a separate item number for just the plug? I had the same poor results with the Radio Shack 274-1532 plug, 4.0x1.7 mm dc power plug, which seems to be the right size but fails to make a solid connection with the center conductor. I even tried filing down the yellow plastic end so that the plug would go deeper into the radio, but to no avail...

Depends on whether you are using it for VHF or HF. My experiences are with an ASTRON 20 amp supply for all the 2M junk, Then I got an Alinco DM-1350 for the HF stuff (35 AMP). Both are good supplies in my opinion, the Alinco can have voltage jumps when adjusting the volts with no load on it though. Just make sure you get one with enough amps for your equipment, if just a vhf radio 10-15 amps is fine, for HF use 30 + amp rated supply.

Please REMOVE nospam when replying!

I see that you can very easily adjust the output power on the TS-850s. Judging by the transistor types used, it seems to me that it would be safe to set it for 150 watts output (using a heftier power supply than the standard one, of course).

The question is: is this likely to damage anything, shorten the life of the final transistors, etc.? The 850 is used mostly for CW (and yes, I know it's just 1.7db).

Vic

Yes...that's correct.

My personal favorite is the MAHA MH-BP-8H 8.4V 1800mAh unit. Slow charge it, and you'll have 1,000 charge cycles of life. Great battery from a great firm.

2739. Re: TS440S problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: jdelac <jdelac@sowest.net>
Message-ID: <336CEE0B.2A8A@sowest.net>
Source record: 176207

I've had my TS440 since 1986 and I have had every problem in the book. I would say that 90% of the problems where generated by KENWOOD in selecting the type of conformal coating (synthetic rubber of the "semi-conductor" type) that they did. I don't know how long they went on doing this, but the bulletins are dated 8/90. I know at least three friends that bought 440's in 1988 that eventually have had the same problem.

Your problem has all the symptoms of VCO2 in the RF board, drifting. The range where the display drops should be 7.5 to 14.5 mHz, exactly. When you take care of VCO2, you might as well do VCO's 1,3, and 4, for they will be acting up next, it is just a matter of time.

To verify that this is the problem, put your 440 belly up, and remove the bottom cover. The large circuit board you'll see is the RF Unit. Locate a shielded (fenced) section in one of the rear corners of the board. Locate Q23 and D48 (approx. center of the section). Connect the 440 as in regular operation, when the symptom acts up, zap the Q23 ,D48 with Freeze freon spray. Alternately, you might use a hair-dryer or heat-gun(easy! with the latter) to trigger the symptoms. Alternately, KENWOOD must have information as to which 440 serial numbers used the bad coating. If your 440 has the bad coating, then it becomes a matter of time (function of usage), cuz it will.

To fix my problem, I adapted a small-diameter nozzle(1/2") to the heat gun and proceeded to remove all of the synthetic rubber with a pair of tweezers after softening with the heat. I did not have to replace any components like the bulletins usually recommend. Since removing the synthetic rubber was such a pain, I did only VCO2. Eventually, VCO4 and VC03 succumbed to the same ailment and were treated with the same procedure. Prior to this experience I had never heard of a "semiconductor" conformal coating. It is a good thing (for KENWOOD) that we don't "drive" transceivers, cuz this one would have been a definite RECALL!.

Eventually, my 440 came down with the VCO5 condition (SB-973), on this one, I removed all of the components within the shield, removed de rubber with a larger nozzle and reinstalled the components. Good as new.

This is my first time in this newsgroup, and not knowing what has come down on this subject before, there is a good chance I might have repeated well known facts to the newsgroup. For this I apologize.

Happy troubleshooting!

Jess KB6MWU/EA7HBK

This seems to be an alignment thing as it seems to vary from radio to radio. I had one (Australian spec) unit which I returned under warranty for a microphonic VCO among other small problems. It had a fairly slow squelch action with squelch crash evident even when using the FTS-22 tone decoder. It wasn't abnormally long though - I just accepted it was normal, until I exchanged the unit and the replacement didn't have any sign of squelch crash at all.

There are some settings to do with squelch which are adjustable internally but most of the radios alignment functions are adjustable without taking the cover off - *if* you have the FS-10 smart controller. I suggest you get hold of a service manual and have a look. Don't try adjusting anything without it. I bought a copy of both the FT-8500 and FT-51R service manuals for about AUS$30 each.

I turned mine off for the same reason. I found its easy to get used to
not having it after a while...

Standard Yaesu mobile practice. In fact, fairly standard for most of
manufacturers these days AFAIK. Encode as standard, decode as an option.
I believe Yaesu were the first to offer decode as standard on
hand-helds.
>[...]

> can't I?

Like I said, get the service manual. Its worth having as a reference,
even if you don't actually ever open the rig. It's nice to be able to
turn down the low and mid power settings and leave the high power
setting at max. I found the UHF TX won't work much below about 1.2W
without becoming unstable and the VHF side at about 2.5W. I prefer being
able to turn down to this rather than 5W, yet still be able to run
50W/35W when I need it.

On another note, has anyone had severe problems with ignition/alternator
noise? I have 2 radios in the car. One's a Motorola Maxtrac 800MHz
trunked radio and the other's the FT-8500. The Yaesu suffers bad
alternator noise and the Motorola doesn't (which perhaps isn't
surprising given the fact that the Motorola's a commercial quality unit
and the Yaesu isn't quite that) which is rather frustrating...

Contact your nearest Motorola dealer or service centre. The service manuals, programming leads and software are still available through Motorola's parts distribution network. They're not cheap. Over here the programming lead is about AUS$160, the software licence about AUS$640 and the RIB (Radio Interface Box, basically just an RS232-TTL level converter) lists at around AUS$339. US prices should be about 25% cheaper.

Of course, if you can find a pirated copy of the software and a copy of the RIB cct diagram (very easy to build on veroboard) then you'll be most of the way there. The programming lead will be the most important thing. It's pretty difficult to find the connectors for the top of the radio to make your own.

This is copied verbatim from the mod sheet I received with my rig...

YAESU FT-530

Expanded Receive 110-180, 300-500 MHz
Expanded Transmit 130-180, 400-470 MHz

NOT LEGAL IN U.S.A - FOR EXPORT ONLY

o Remove Antenna and Battery.
o Remove four screws on bottom holding battery track.
o Remove the four (black) screws holding rear case.
o Slowly... open the front cover from tranceiver and lay both halves on table.
o Note positioning of white paper insulator in right half of radio and lift out
(don't throw away)
```

o Carefully locate Jumper Pad 13 and remove solder.
o Re-install white paper insulator, make sure ground tab slides through the
paper insulator.
o Close radio back up (Careful not to pinch the ribbon cable near lithium
battery when closing halves).
o Re-install the four (black) screws holding rear case.
o Re-install the four (small silver) screws on bottom holding battery track to
radio body.
o Attach Antenna and Battery.
o Turn off Radio.... Press and hold both arrow keys while turning on the Radio.
o Modification Complete.

```
------------------------
| |
| |
| |
| |
| --- |

----------------- Blowup ---> 10 (|) (|) 9
12 (|) (|) 11
14 (|) (|) 13
16 (|) (|) 15
-
```

In side the rig, it really did not look quite like that ... more like this:

```
... 12 (|) (|) 11
(|) 13
16 (|) (|) 15
```

In addition to the published receive expansion, it also receives 800-950 MHz...
trunking radio, cell phone (I would *never* listen to that), 33cm ham band...

Have fun!

C O R R E C T I O N
I've had 'em all, and this one is the BEST! See May '97 Review in CQ Magazine. This radio has ALL of the Optional filters (FL53A/101/102/222/223) in addition to all of its other fine features. It is the ULTIMATE for DX, Contests, or just plain ol' Rag chewing. I'm the original owner, it still has some warranty left on it. I'll ship it for $3175.00. I also have the matching SP-20 speaker w/filters. I'll ship it for $145.00. As a Package for $3275.00.
They come in original boxes, packing, owners manual, service manual and all accessories.
I purchased both of these new, They look and operate as new, with minimal use.
I'm selling because I'm hardly ever on the air anymore. Tnx es 73, Van

Subject: How do I erase a single memory channel on the Yaesu FT-50?

look in the manual under memory masking page 31. You "mask" the memory
without removing it. The procedure is hold the function key for .5 sec
while on that memory, then press mr. The display should change to ch-1.
For all purposes, the memory is erased. It can be restored if needed.

Yeah, probably everyone who has tried to use one at higher
power with an on-radio whip better than the supplied rubber
dummy load has seen this. The solution is to not try to run
high power unless you use an external antenna. As you
guessed, the problem is RF getting back into the radio
and unlocking the PLL.

If you just *insist* on doing this, adding a counterpoise wire
(aka a Tiger Tail) may eliminate the problem. Just connect
a 19 inch wire to the BNC connector shell and let it dangle.
This will also often improve your range, so it is worth trying.

It does not matter who you report the "illegal" act to, nobody cares,
and nobody will do anything.
This is the way ham radio is today.

>probably just as cheap to buy a HT)

Transverters can be a good thing if you are interested in SSB/CW simplex
operation on VHF/UHF. But most HF rigs don't deal with repeaters well,
and the bulk of VHF/UHF operation is via FM repeaters. And there are
FM only radios which are almost as cheap as a good transverter (in some
cases cheaper), so that often makes more sense than struggling to use a
HF rig and transverter for operation for which they aren't suited.

However, let me encourage you to resist the temptation to buy a HT. They
are specialized tools for foot mobile operation. Most will overload badly if
connected to a good antenna, and most run too low power to be comfortable
copy for other stations. Buy a mobile/base radio instead. Used ones can
be had cheap.

Subject: new logbook software

April 30, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator (new) and distance/angle to your station. (Almost) all Dutch towns in it.
* Complete QSL registration. It sends for every band a QSL till the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance, angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the programm like: calculations, analysis for QSO's, worldwide (or local) certificates, contest possibilities - these QSO's in the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo version of the programm. You can use this for 100 (one hundred) QSO's. (After registration - for a low fee you can still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the English version in the end of May. (Please let us know if you want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends. With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)

Subject: Sony SW-77, turn on problem...

Costas Spanos (spanos@eecs.berkeley.edu) wrote:
: I have a Sony SW-77 that has had a peculiar problem since I
: got it, new, as a present less than a year ago.

: Most of the time, when I first turn it on it appears to be into a "mute"
: mode. It sounds as if the first RF stage is off and the radio barely
: receives anything. The problem goes away if I hit the "scan" button, or
: if I quickly cycle the power button. Sometimes the problem goes away if
: I simply turn the frequency encoder.

: Anyone seen this problem before? Should I send the radio to Sony for
: repair, or is there a simple fix I can do myself? (I have the service
: manual).

: (BTW, this is the updated version of the SW-77 with the long antenna).

: thanks!

: Costas

Yes, I bought a SW-77 that I hoped to use for recording programs with
its excellent timers, but quite often would have the same behaviour,
making it useless for unattended recording. I ended up returning the
radio, so I don't know if it is repairable at all. The shop I bought
it from tested it, and of course, it didn't do it for them, so they
didn't believe me, but I did return it within their time period. This
was a shop in Dallas, TX, so I bet it didn't end up in your hands!

Other than that, it was a great radio.

good luck,

Sam Pool

Could someone direct me where I can get one of this?
Is there a dealer in States who handles Kent products?
TIA
Tony, VE6CGX

2755. Re: FT-800 PROBLEM!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: "Victor D. Mete" <KE4QJK@worldnet.att.net>
Message-ID: <01bc5870$33626880$046592cf@AT&TWorldnet.worldnet.att.net>
Source record: 176248

Hi Gary,
I too have the FT-8000. Great radio overall ... loads of neat features.
But I also had a noise problem; alternator and electrical noise (spark plug pops). Also wired the radio DIRECT to the battery with HEAVY DUTY wire, and as short and shielded a run as possible. Nothing I did to try to solve the problem worked until a friend loaned me a Heavy Duty Radio Shack noise filter ($19.95). It cleared up 90 plus percent of the noise. It might work for you.
Just a side note: it does seem the FT-8000 has a front end susceptible to electrical noise. I never had the problem running a TM-742 or FT-2200 mobile in the same Toyota truck. Even when I go by certain stores it receives electrical noise (static)!!! But I'll live with it.

Vic

Jeff, KC1MK

Hi Jeff,

Common problem, the Radio Shack does not like the hight voltage. There is a regulation for the top 12 volt input but the bottom has little to nothing, you can build a better regulation circut into the bottom. I did on one, but for the gain of the larger battery it was not worth the effort. There was no real output gain at all. Be carefull I have heard of three people having this problem with the 202's when using the 12 volt cig. plug in Chrysler products, the chrysler regulators are rather slow in the older models and peak has high as 22 volts at times which will also trip the error 2.

Hope this helps.

2764. Re: Illegal Transmission

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: n5off@w5ddl.aara.org.nospam
Message-ID: <n5off-0405970821590001@ip73.lafayette.la.pub-ip.psi.net>
Source record: 176257

I think the penalty is $10,000 and a year in jail, max.

However, since FCC resources are very limited, accidental excursions are not prosecuted, nor are malicious events on the ham bands, unfortunately.

The hams do a good job of finding bad guys, especially on VHF/UHF, but there are lots of violators on the ham bands casting a bad light on the hobby. They do it day after day and only the very worst get a slap.

Where the FCC will focus its enforcement resources is on matters of public safety (like aircraft, marine, and police radio interference) and matters of big bucks, like TV and cell interference.

But using a ham HT on at a legit business, for instance, that is like making a turn without a blinker compared to marine and aircraft interference in the eyes of the G boys who have more work than they can shake a stick at.

Good Morning Tony -- I bought mine from:
R.A. Kent (Engineers)
P.O. Box 809
Mount Ida, AR
71957--0809

QST has an ad on page 154 of May issue.

Available assembled or kit form. Mine is the single paddle type -- not
Iambic -- my preference and really like the Kent model for this use.

Have you tried ***ICOM*** ?

Icom has a parts and service setup in Bellvue, Washington......

Icom America 2380-116th Ave. N.E. Bellvue, WA 98004
206.454.8155

or http://www.icomamerica.com

I don't know what kind of problems you'll have getting the part to Costa
Rica, but its worth a shot.....

2772. *****LOOKING FOR INFO ON TEMPO S1 2 METER HT**********

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-04 00:00:00 UTC
From: adavydov1@aol.com
Message-ID: <19970504162400.MAA14218@ladder01.news.aol.com>
Source record: 176265

Hi,

I'm a big CB and scanner fan, but this past weekend I attended a Hamfest and I saw a Tempo S1 FM Transceiver for $10, so I bought it. The radio is programmed by turning the correct knobs on the top of the radio, and selecting +600, -600, or simplex operation. It also has a keypad on it, but I'm not sure what it's used for, but it could be for autopatch because it has the * and # keys on it. The label on the back reads 1.5 Watts RF Power, and 144-148 MHz transmit/receive. I also got a small instruction manual with it, but it doen't reveal anything informative. It's serial number is 002574. I think this radio was made in the late 70's, but I don't know because I not into ham technoligy that much. I'm looking for any information anyone has on this 2 Meter HT. If you have any info, please e-mail me, try to avoid posting something in this newsgroup beacuse I have poor access to the newsgroups.

Thanks,
ADavydov1@aol.com

>

Be VERY careful with these. I worked with these (and did qualification
testing) while
at Mallory. During high discharge, cells can become reverse biased and
vent or
explode. One D side internal cell went through TWO sheets of 1" transite
and lodged
itself in a cinderblock wall. NEVER, NEVER, NEVER attempt to recharge
these batteries!

Also, short circuit current is in the range of 150 Amps, so make sure to
fuse your
setup... (ie, don't bypass the pack fuse).

And NEVER open up the cells. SO2 turns into (eventually) sulphuric acid on
contact
with the moisture in your lungs, plus the electrolyte salt is cyanide
based.

That all said, these are incredible batteries.

2775. Old Hartman Transceiver info needed.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5klk29$33l@coranto.ucs.mun.ca>
Source record: 176018

I would like to know about a Hartman Marine Model 3059 tube Radio Telephone transceiver. It looks very old but don't have any dates in mind. Looks old and I was told very rare.

The radio is very strange in that not only is it a 4 channel marine transceiver but receives the AM broadcast band from 550 kHz to 1600 kHz. It also has two strange triangle marks on the AM dial.

Can someone fill me in on this radio and or the Hartman Company.

Radio looks like a table top radio with four feet on the bottom, this is not a rackmounted type radio.

2776. !WTB: YAESU FV-102DM DIGITAL REMOTE VFO

I want to buy a 70 to 80 ft. Trylon or Rohn self supported tower.
Something that would handle about 20 sq.ft at the top.
I am located in Toronto, but will arrange transportation in Northern
States and Canada wide.
If in Ontario will consider taking down.
Will trade for various equipment or straight cash.
Contact Ed at e-mail:emontana@aracnet.net
Phone 416-438-5115, fax 416-438-3315.
73's from
VE3YZR, LU9HHM, one and the same.

From: Michael Nie <mnie@fuse.net>
Message-ID: <336E932D.3999@fuse.net>
Source record: 176021

Some of us are using old Tac Tec mobile radios. Very stable and reliable. I believe they were made by RCA. One of the guys programs the EEPROMS using Tac Tec programing software on a VIC20 computer.

Question: Does anyone know if software exists to program these radios on an IBM compatible? If so, where might we find it?

Thanks,

Mike Nie

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you can make money by joining this or that scheme! Guess what, you decide to go for it and then you get nothing but frustration and disappointment! We are here to take your frustration and disappointment into an Electrifying Adventure!

We have been marketing on-line for almost 2 years now! We have never spent one red penny on advertising and made nothing but profits. We can show you how to make money every day of the year. Many people may think this is untrue or it just can't be done. We are here to tell you that it is absolutely not true. The biggest mistake people make about marketing on-line is that they sit and wait for people to contact them. You will never make it if this is your approach and we'll tell you why. There are over 60 MILLION people on-line right now, and seven new people logging on every minute of the day world-wide and everyone is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your

Creative E-mail System. I had to hire my two family members to help me out!
This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

============> E-Mail Databases <================

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your

advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

I have some radio gear that comes from a relative who was an Advanced and
is now an SK. Much of it is pretty old. I'm interested in getting rid of
it now, but have no idea how much it's worth. If anyone wants to buy any
(or all) of this stuff, I'd appreciate it if you could send me an e-mail
at vidgames@netcom.com (unless someone has a better idea), and I'll take
the best offer; e-mail for more information and I'll do what I can. I'm in
the San Francisco area, so please take into account that I'll add shipping
to your location to your bid. Oh, this gear is in very good shape
physically, though I don't know how well it works electronically. Judging
by the meticulous habits of the owner, I'm sure it's fine. Obviously, if
you're also in the SF area and can pick it up, shipping won't be a problem
and you can eyeball the units yourself--especially the unidentified
pieces (and there are some assorted pieces not on the list below).
Thanks...

>It does not matter who you report the "illegal" act to, nobody cares,
>and nobody will do anything.
>This is the way ham radio is today.

I totally disagree. although complaining to the FCC will not usually generate an investigation, Ham radio operators are usually their own best policeing.
This happened in our area, a couple went to radio shack and purchased 2 meter handhelds, and started using the repeaters. They were unable to come up with callsigns, and an old fashioned 'foxhunt' found the culprits, who were informed, by personal appearance at their door, that they would no longer be allowed to use the system.
>>and nobody will do anything.
Partially true, the couple above moved to simplex frequency, where they still operate today, but no interference on the repeaters, so no one bothers. (Hey with the small wattage output, and on simplex, who would they bother). BUT no one else communicates with them (licensed), so it becomes a REAL expensive CB.

2795. NEED TR7 INFO

Hello everybody,
is someone so kind to explain exactly the difference
between the first part of TR7 production and late units, and about the
starting
serial number of "late" ones ?
TR7 vs TR7A and R7 vs R7A : what real differences ?

Some colleague seems to prefer late TR7s (not "A") because "less noisy",
several other people tells that "TR7A is a remarkable improvement", but I
would like to know exactly about specs and mods.

Thank you very much in advance, and best wishes !
Fabio

2796. Mod for FT-1000MP power control with 3CX800 amps

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: morel.GRunberg@telrad.co.IL
Message-ID: <c=US%a=_%p=TELRAD%l=MISMAIL-970505111234Z-157@mismail.MIS.ELEX.CO.IL>
Source record: 176080

Few days ago, I asked for modification of the Yaesu FT-1000MP
RF output control. As known, the first series don't have continous
power control output and this can be sometimes a problem when
driving modern 3CX800 amps (like Alpha 87A, 89, Command
HF-2500, HF-1250, Ameritron AL-800H and so on) at desired
specific output levels without overloading the small dissipation grid.

First of all, many thanks for the 40+ answers.

Second, for those who asked from me to send them too the answers:
the solution is to cut a PCB trace and add a jumper. All the details
can be found on files archive at http://www.contesting.com/_yaesu.
This mod come with a note that the change is made at tcvr owner
sole responsability. Anyway for those having rig still in warranty
period, is strongly recommended to send them to Yaesu.

>
> I don't blame him for taking the money. A bird in hand is better than
>two in the bush!

Oh come on... surely you have better character than that. Mark AGREED
to the COD offer. It's called a VERBAL AGREEMENT. It is about keeping
you WORD. No one held a gun to his head to agree to the COD... all he
had to do was say NO. That's all. He could have said it nicely.
Easily. Instead, he chose to throw away his reputation because it WAS
easier money. The value of his reputation damaged and personal honor
lost could not possibly equal a small inconvenience. I know... this
was only a little telephone ham radio business deal. What's the big
deal? Doing your best to do what you say you will do is NOT a small
matter no matter how inconsequential the actual subject is. Worst of
all: you are the one who must live with that choice. The little things
add up. If you truly do business that way, remind me not to ever do
business with you. I certainly won't with Mark.

This is a factory authorized and designed mod, so unless you screw up the radio in the process of installing it, you are on solid ground. ;73, Tyler K3MM

To: ham-equip@ucsd.edu
cc: amps@contesting.com, yaesu@contesting.com (bcc: Tyler G Stewart/BENN/CEC)
Subject: [Yaesu] Mod for FT-1000MP power control with 3CX800 amps

Few days ago, I asked for modification of the Yaesu FT-1000MP RF output control. As known, the first series don't have continous power control output and this can be sometimes a problem when driving modern 3CX800 amps (like Alpha 87A, 89, Command HF-2500, HF-1250, Ameritron AL-800H and so on) at desired specific output levels without overloading the small dissipation grid.

First of all, many thanks for the 40+ answers.

Second, for those who asked from me to send them too the answers: the solution is to cut a PCB trace and add a jumper. All the details can be found on files archive at http://www.contesting.com/_yaesu. This mod come with a note that the change is made at tcvr owner sole responsability. Anyway for those having rig still in warranty period, is strongly recommended to send them to Yaesu.

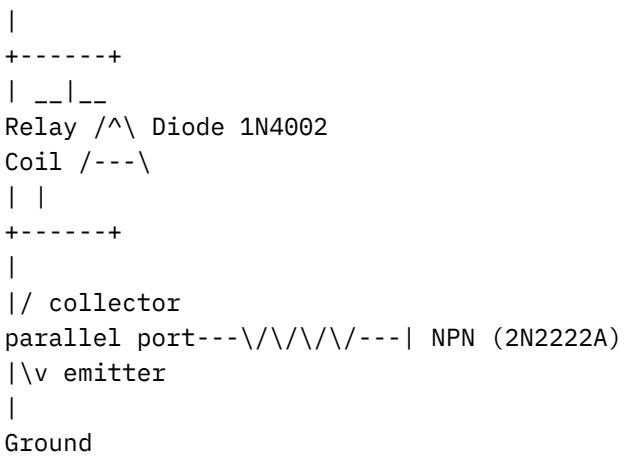
I don't know WHY I see newbies and silly folk who don't THINK electronics
very well yet always putting the relay "AFTER" the transistor, as if that
was something important!! Well it's NOT, and in fact its a BAD PRACTICE if
you want the parallel port to work well!! By "AFTER" I mean on the emitter,
as if that will help because "after all, the controlled voltage/current
comes OUT of the EMITTER doesn't it?". NO, incorrect thinking, AND, this
diagram above can cause the transistor to kick on and off as the voltage

across the relay goes up and down jacking the transistor CE junction and the base reference to the emitter UP and DOWN and UP and DOWN like an East L.A. Lowrider Car!! It will oscillate if the base resistor is right on the edge!! And it's dumb!! (Also, they always leave out the base resistor!!!).

If you use the collector to SUCK juice through the relay coil instead of trying to have the emitter BLOW into it, then you don't wind up with the base ON voltage climbing into the sky when it goes on, and maybe not STAYING on as long as the port pin would like!!! The PROPER use of an NPN transistor is to SUCK juice through itself NOT TO BLOW!!! It makes the circuit action unstable because it hops up and down on the emitter load's changing on and off voltage drop across the relay coil!!! Here's the proper way to do it, WITH the all important free-wheeling diode to slurp up the coil inductive kick when the transistor turns off, so it won't blow up the transistor!! A coil likes to keep current flowing and will try desparately with its collapsing magnetic field to keep the current flowing when the transistor turns off, acting like a momentary source of high voltage! The diode with its butt in the air allows it to shoot through THAT instead of your collector-base junction!!! It fires in a circle till the field is used up! But the diode is not a path when the coil is on or off at rest because it is reverse biased in the path from Vcc and won't conduct in that direction! Neat, eh? So always do it this way!!:



And DO read the FAQ files on the parallel port to be found on my site below in my LPT/ subdirectory. You will be glad you did if you want to know all the neat stuff you have and didn't know it in your parallel port!!

From: wa4vrv@srv.net (Jay C. Greenberg)
Subject: BEWARE OF DEALINGS WITH Mark S. Conway

This is just a warning for anyone who might enter into a deal with
"Mark S. Conway" <mconway@Nantucket.Net>. I am only representing
myself as I have no other data points.

Last week, Mark posted a Kenwood TH-79AD(H) for sale which I responded
to and agreed to purchase. Yesterday, I sent Mark an email asking him
to let me know the UPS tracking number so that I could have the money
ready when the package arrived (see, the deal he posted included
shipping, but I asked if he would ship COD and he agreed.) Its a good
thing I didn't go out and get a money order or send him a check!!

So, he replied later last night with the following:

Date: Sat, 03 May 1997 19:22:07 -0400
From: "Mark S. Conway" <mconway@Nantucket.Net>
Organization: Nantucket Net
To: "Jay C. Greenberg" <wa4vrv@srv.net>
Subject: Re: Kenwood TH-79AD

Jay, Please don't be mad, but someone local here just bought it.
Sorry for all the trouble..... Thanks, Mark

Here are the original email's between us for anyone who cares to read
them:

Depends on whether you are using it for VHF or HF. My experiences are with an ASTRON 20 amp supply for all the 2M junk, Then I got an Alinco DM-1350 for the HF stuff (35 AMP). Both are good supplies in my opinion, the Alinco can have voltage jumps when adjusting the volts with no load on it though. Just make sure you get one with enough amps for your equipment, if just a vhf radio 10-15 amps is fine, for HF use 30 + amp rated supply.

>This is the way ham radio is today.

I totally disagree. although complaining to the FCC will not usually generate an investigation, Ham radio operators are usually their own best policeing.
This happened in our area, a couple went to radio shack and purchased 2 meter handhelds, and started using the repeaters. They were unable to come up with callsigns, and an old fashioned 'foxhunt' found the culprits, who were informed, by personal appearance at their door, that they would no longer be allowed to use the system.
>>and nobody will do anything.
Partially true, the couple above moved to simplex frequency, where they still operate today, but no interference on the repeaters, so no one bothers. (Hey with the small wattage output, and on simplex, who would they bother). BUT no one else communicates with them (licensed), so it becomes a REAL expensive CB.

Subject: NEED TR7 INFO

Hello everybody,
is someone so kind to explain exactly the difference
between the first part of TR7 production and late units, and about the
starting
serial number of "late" ones ?
TR7 vs TR7A and R7 vs R7A : what real differences ?

Some colleague seems to prefer late TR7s (not "A") because "less noisy",
several other people tells that "TR7A is a remarkable improvement", but I
would like to know exactly about specs and mods.

Thank you very much in advance, and best wishes !
Fabio

>if so, is FCC type-approval in any sort of question?

There is absolutely no truth to the claim that the FCC has taken any legal action against either PREMIER Communications or ADI. The U.S. version of

the AT-600 is perfectly legal in this country. Neither the receiver type acceptance nor the importing certificate for the radio have been pulled by the FCC. The AT-600 continues to be imported.

This confusion began last month when we began to enounter some CPU trouble with some of the AT-600s we had shipped (one of the batches of CPUs the factory had bought was found to be defective). We asked our dealers to perform a limited recall of the radio so we could check each for one of the defective CPUs.

Our limited recall closely followed the removal of the HTX-204 by Radio Shack, but the two events are, to my knowledge, completely unrelated. One of the AES salesmen has been telling customers that the radios lost their type acceptance, but this is untrue. I was at the AES SuperFest show over the weekend, and I encountered that same salesman then. I spoke to the management of AES (who never told their salespeople that the recall was because of FCC legal problems) and the problem has been corrected. No one there will be spreading that disinformation again.

>Thank you for your time, I'm sorry if you're flooded with this sort of query
>right now. There's a lot to be said for the quick spread of information by
>USENET, but there's also a lot of misinformation out there, too.
>
>Tom Russo KC5ZYC WWW:http://www.swcp.com/~russo/

You are quite correct, Tom. The Internet is a good tool for disseminating information quickly, but is also a great way for rumors, misinformation, and lies to spread rapidly. As always, the information is only as good as its source.

By the way, below is some information on the AT-600 / HTX-204 straight from the PREMIER Communications FAQ that is on our webpage. This is the company's official stand on the situation.

* * *

Q: Didn't you make the HTX-204 for Radio Shack?
A: ADI Communications Corporation manufactured the HTX-204 handheld for Radio Shack. However, PREMIER Communications has nothing to do with this arrangement. Both PREMIER and Radio Shack bought their radios from the same factory, nothing more. PREMIER does not offer any technical support for the HTX-204.

Q: What's the difference between the AT-600 and the HTX-204?
A: The two radios are indeed very similar. However, the AT-600 has a number of features that the Radio Shack does not, including wired cloning, PC programmable, auto power on, programmable VFO range, battery voltage indicator, DTMF decode, and 200 memories in non-alphanumeric mode (as opposed to 120 for the Radio Shack version).

Q: Are accessories for the AT-600 compatible with the HTX-204?
A: Generally, yes. The radios both use the same batteries and chargers, and the same microphone and speaker wiring schemes. Since both radios are

physically similar they also can use the same protective leather cases.

Q: Why did Radio Shack recall the HTX-204 and how does the recall affect the availability of the AT-600?
A: PREMIER Communications has no knowledge of why Radio Shack recalled the HTX-204. Officially, they claimed that they were "concerned that the radio could be used for illegal purposes." What their exact concerns were is anyone's guess.
Some of the initial AT-600s did have some minor CPU problems. It is possible that Radio Shack recalled the HTX-204 because of some related problems, but it seems unlikely. The recall does not affect future shipments of the AT-600. There have been some minor delays on ADI's production line, but production is proceeding at full speed.
It is not known whether Radio Shack will be reintroducing the HTX-204.

2813. FS: Heath HW-32 20m SSB monoband xcvr

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5kl8dq$1pm@sf18.dseg.ti.com>
Source record: 176097
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

For Sale:

Heathkit HW-32 20m SSB monoband transceiver, 14.200 - 14.350 MHz USB.
Physically in good shape, very little wear on the front panel.
Electrically, it's basically functional (I made a contact on it).
Needs three tubes I donn't have on hand (one each 6BE6, 6EB8, 12AT7).
All other tubes have been tested and are good (including driver and PAs).
No modifications that I can spot (had a BNC installed on rear panel,
which I removed, leaving an empty hole, but that was all I found).

Original manual, power supply cable, and a non-matching mic included.

This rig WILL require some work, but it is basically functional.
Consider it to be a "project radio". It is NOT for the beginner!

Requires one of these Heathkit power supplies (NOT included!):
PS-10, PS-20, HP-13, HP-23, HP-23A, HP-23B

Or build your own, with these requirements:
+800 vdc @ 250 mA
+250 vdc @ 100 mA
-135 vdc @ a few mA
12.6 vac @ 3.75 A

Price is $50. Buyer pays shipping (15 lbs from 75065).

73,
Dean K5DH

For Sale - Eddystone 940

1960's general coverage receiver in the typical grey Eddystone Style.
One of the most popular sets used by amateurs.

Complete and in excellent condition and working order. The only mods
are a different mains connection and aerial socket.

For Sale - Eddystone 730/4

1950's general coverage receiver in grey case with flip up lid. This is
another popular model and is in excellent working order and good
condition. Has similar mods to 940 above.

I will take offers on these two radios until Wednesday 7th May in
POOUNDS STERLING ONLY. Please DO NOT INCLUDE CARRIAGE in your offer as
this will be at your discretion; i.e. you can arrange collection or I
can tell you the cost price to me to add on.

2821. Comments on HTX-202

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: Peter Orban <Peter.Orban@nrc.ca>
Message-ID: <336E2787.41C6@nrc.ca>
Source record: 176105

Is the HTX-202 suggested for a new ham - it is on sale for C$ 230.00?
How does it compare with other 2m handhelds?
Any known problems, variants of the rig?

Any comment on using the 2m vs. 70cm band?

I realize that there are no simple answers, but I still would not mind
some help.

Thanks, Peter

2828. Re: IC-706 Mark II upgrade

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: "Robert A. Kile" <midnight@bighorn.accessnv.com>
Message-ID: <336EB1FD.4CCF@bighorn.accessnv.com>
Source record: 176112

It would seem that some sort of upgrade path would be logical for the IC-706 and for many other HF transceivers on todays market. In the case of the IC-706 however several boards would need changing. The PA, LPF, RF BPF, Control and display units to name a few.

It is unfortunate that the dwindling HF market could only sustain the original IC706 for a little over a year. A far cry from TS-520 and FT-101 days which carried for almost a decade.

I've suggested for a long time that manufactures should try improving upon good designs by releasing improved models with noticable changes and enhancements rather than complete new designs. The catch-22 is that with advancing technology it is more often cheaper to engineer a radio with new devices than to re-engineer a radio with no longer available components. Our equipment market is driven by consumer products which are here today gone tomorrow.

2830. Miniature AM Broadcast Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: Wayne Plack <plack@calweb.com>
Message-ID: <336ED037.3BA3@calweb.com>
Source record: 176114

I need a small AM radio (or AM/FM) that either fits IN the ear (like a real small hearing aid) or one that hooks over the ear (the bulk of the radio behind the ear, w/an audio tube leading to the ear canal opening - like a large hearing aid). I want to be able to wear the radio without the "headset look" (just one earphone - unobtrusive). Only the AM band (560 - 1600 KHZ) is desired though AM/FM would be OK. I've been looking all over for such a radio, and I cannot find.

Any help?

2831. 50.400 AM

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: Dave Booth <*SPAMSAVER*booth@pactitle.com>
Message-ID: <336E4560.7DE1@pactitle.com>
Source record: 176115

Well it's time to get the AM gear warmed up.

Starting today I'll be out on 50.400 AM

I'll be on at 19:00-19:30 PDT Monday and Thurs.

If there is a opening around 16:00 PDT then I'll be
on as soon as I get home from work Mon - Fri!

Hope to hear from a lot of you.

I have received a lot of e-mail from all over the country
and Canada in full support of this test.

Be sure to check out my web page for current info.

http://www.geocities.com/Hollywood/5860/50am.html

Also send me e-mail of your QSO's and I'll post them on my page!

2832. Alinco DJ-S41T, 70cm HT, my first reactions.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: "Robert (Bob) Diaz" <cqbdiaz@pacbell.net>
Message-ID: <336ED550.639D@pacbell.net>
Source record: 176116

After reading all the past postings for the Alinco DJ-S41 HT, I saw that almost everyone was happy with their unit. The small size, light weight, and low cost were exactly what I was looking for. I hope that my sons will get their Ham License soon. If so, this is the radio I'm going to purchase for them.

Well, 2 days ago I went to the local Ham Radio Outlet and purchased a unit for me. The current price on this unit from HRO is $120. I assume that other stores will/are offer the unit at around the same price.

While I've only had the unit for just 2 days, I though I'd share my first thoughts about starting to use the unit.

With the 3 AA batteries, the DJ-S41T puts out about 1/3 of a watt of power. Before I started uning the unit, I worried that this won't be enough power. I'm happy to say that for my needs, 1/3 of a watt IS enough. I can hit a repeater up on the hill that's over 5 miles away. According to the signal reports, my signal is coming in 100% clean. I havn't had a chance to see how far I can go with it, but I'll try it out latter on. Today I did "hit" the same repeater from work. No one came back, so I can't say how good/bad my signal was; however the signal had to travel over 20 miles to trigger the repeater. Not bad for just 1/3 of a watt.

The audio output from the unit is VERY good. In general, small speakers don't produce a good sound, but this unit seems to be the exception to the rule.

The 1 page instruction manual is a bit thin <humor intended, but it's true>. That would be my main gripe, but Bill Ricker, N1VUX has written a better manual and posted it on the WEB. Here's the addres to this page:

http://world.std.com/~wdr/alinco.html

I live in the L.A. area where there's a lot of RF out there. My Radio Shack HTX-202 (2 M HT) ignores all the intermod noise; the Alinco DJ-S41T does not. This might have been a problem, except that I discovered that when I fold down the antenna, the sensitivity of the receiver is reduced. Thus, when the antenna is down, I don't have a problem with intermod noise. Yet the repeater's siganl is strong enough for me to pick it up.

I still have a lot of things to try with this unit, but so far, it's looking very good. Keep in mind that this is a unit that sells for $120, don't expect lots of features, like DTMF or PL for receive. If you're looking for a basic unit at a very low price, I give the Alinco DJ-S41T a thumbs up.

If you'd rather use 2M, ALinco has a unit, the DJ-S21T that sells for $120 at HRO. I saw the unit at the store. While I didn't try the 2M unit, it appears to be about the same as far as power, size and features as the DJ-S41T.

I saw pricing at several Dealer Web sites to be $1350
Assume the price will drop $100 within the next year plus Icom may give
the Separation kit etc. for free to keep the product moving. The first
Hams who "HAVE TO BE FIRST" usually pay thru the nose and are the ones
with the "bugs" in the radios.

Subject: New logbook software

May 5, 1997

Dear HAM,

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO

* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.
For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's) Of course you can make more
QSO's with the registrated copy.
The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)
You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.
If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

RECEIVE THE DEMO-VERSION FOR FREE (NO COSTS)
BY E-MAIL

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

I've got a Yaesu radio and it works good without mods. Do you have poor
audio? Are there spurious emissions? Maybe you want to disable the TTP
until you use the PTT switch. If I'm not careful when I grab the
microphone, it sends a tone or two. Best of luck improving your radio
with mods, Brian.

Subject: Trade-New Heil Proset 5 headset/microphone for 2M amplifier.

I have an unused Heil Proset-5 headphone/microphone set in original box
with manual that I would be willing to trade for a 2 meter mobile
amplifier. The headset has 1/4" and 1/8" plugs for phone/mic,
respectively. The amp must be in excellent condition and work properly.
Am also willing to trade for something else. Just Email me. Thank you!

Bill, be *real* careful using ALC for power control. The power will spike up to
full output momentarily until the ALC can grab it. This will happen at the start
of every syllable in SSB. That could fry your transverter, or at least generate
some real nasty spurious products. The better course is to tap the radio at
an earlier stage to get the low drive power you need. You can disable drive
to the PA by either pulling drive or cutting B+ to the PA.

From: "Jim Gerke" <jgerke@why.net>
Subject: Yaesu Ft-530 Mods.

BE CAREFUL with mods for the FT-530!

According to mod info I got from Yaesu last year, there are THREE DIFFERENT
mods for the 530. Each is applicable to a different group of serial
numbers.

Mod 1 is for S/N's xx14xxxx thru xx23xxxx
Expanded RX -- 110 - 180, 300 - 500
Expanded TX -- 130 - 180, 400 - 471

Consists of removing the solder from pad 13

Mod 2 is for S/N's xx24xxxx thru xx30xxxx
Expanded RX -- same as Mod 1
Expanded TX -- same as Mod 1

Consists of cutting the green wire which jumpers pad 13

Mod 3 is for S/N's xx33xxxx thru xx43xxxx
Expanded RX -- 110 - 177, 300 - 510
Expanded TX -- 130 - 177, 400 - 470

Consists of:
Removing solder from pads 1 & 3
Cutting green wire which jumpers pad 13
Jumper (add solder) to pads 4 & 5
(jumpers 4, 5, 6, 8, 11, & 15 are
now installed)

All three mods require you to press and hold both arrow keys while turning
on the radio.

These were taken from "The Yaesu Book", Number 4, (a booklet containing
nothing but mods for Yaesu radios) dated May, 1996, which I obtained from
Yaesu at a major hamfest in mid-1996.

Although these mods may also allow you to tune the 800 MHz range, later
versions of the 530 did not have the RF components necessary to receive 800
installed in them. Even though 800 might show up on your dial, these later
radios cannot actually receive up there. And besides, you're not supposed
to do that anyway.

Have fun.

73, Jim, KC5OA

2840. ATLANTA RADIO CLUB'S HAMFESTIVAL JUNE 21-22 1997

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-05 00:00:00 UTC
From: rychard@atl.mindspring.com
Message-ID: <5kjd93$i9@camel4.mindspring.com>
Source record: 176216

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.
Our club president is Bill Bass W4LFC ph# 770-493-8438,his email
address is BillW4LFC@juno.com ,our vice-president is John Talipsky,Jr
KA4VQH ph#770-925-7110 his email address is johnka4vqh@juno.com ,our

club Secretary is Penn McClatchey K4PE ph#404-605-0742 his email is pmm@saf.com our Treasurer is Charles Golsen N4TZM ph#404-252-3303 his email address is cgolsen@atlanta.com ,our clubs activities manager is myself Richard Dean Young KR4IU ph#404-622-8433 my email address is rychard@atl.mindspring.com ,the opinions expressed are my own and are probably bias due to my love of the radio hobbies.
Hope to see you at the hamfest soon.

Source record: 176027
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

If you're looking for a Windows 95/WindowsNT program to control your Yaesu FT-990 radio, I've decided to offer my MasterControl 990 as shareware. The features are noted on my MasterControl 990 home page at http://prairie.lakes.com/~medcalf/

You'll need an RS-232 to TTL adapter to talk to the FT-990, and one available COM port on your computer (the program supports COM 1 through COM 9). The shareware registration is only $25.00 and I'll be happy to consider all suggestions for improvements from registered users.

2843. Help with moto programming...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: hillgen@bigfoot.com
Message-ID: <5km0fe$q7c@chronicle.concentric.net>
Source record: 176028

No, this isn't another one of those requests for bootleg software....
I need a little help programming a Moto Saber VHF. The radio is
quoted as having a 148-174 bandsplit and the RSS will allow
programming to 147, however I'm looking for a way to get down to 144.
I've been told that the code created by the RSS could be edited to
allow out of band operation. Can anybody shed some light on this?
How it's done. Does it work? Are there any other ways of achieving
the same goal? Any and all information appreciated!
Thanks!
Jay

From: U M Edwards <lumway@atl.mindspring.com>
Message-ID: <336EE236.2646@atl.mindspring.com>
Source record: 176032

I have a 2 meter Syntor X that is muted by the microprocessor. The "Mute" line is held low by an I/O chip controlled by the micro. The rig is putting out power on the right frequency so I'm 99% sure that it also on rec. freq. correctly. There is a green 3x3" or so PC board that is mounted as an accessory. It has a bunch of leads plugging into the red personality board.

The radio just sits there mute.

Anyone know how to wake up this beast?

Mike:

Congratulations to your successful upgrade! I just like to throw in my
1 cent worth of opinion to code drilling. Although some people will
take =

the code issue very personally, I don=92t mean to convince anyone to =

agree with me anyway. After all, this is a newsgroup on the internet.

Back to the subject. I didn=92t use any tape at all when learning code;
instead,
I used the "Super Menu Driven Memory Keyer" from MFJ. I figured that it
would be more cost effective to get a piece of hardware as part of my
station
build up. Computer software and tapes can only serve one single purpose =

and are not all that flexible. Moreover, I can connect the Memory Keyer
to =

my computer and I have an instant computer program for me to verify text =

copied. I can customize my passage and words to drill on, especially =

those punctuation marks. On the investment side, the keyer (or
equipment =

alike) has better resale value than tape or software. =

Anyway, I used the thing to get myself from General, Advance, to Extra
in =

3 months. Although it was a little clumsy, I brought it along
everywhere I =

went. Forget about "Morning Edition", "All Things Considered", and my =

favorite audio tapes. I boosted my code speed from 0 to 25 WPM in =

conjunction with listening on HF and WA1W, in a matter of 3 months! It =

took me one shot on the first 20 WPM test and the rest was just plan =

studying.

I use the MFJ box as a station identifier on VHF (yes you can program
the
box to transmit your callsign every 10 minutes), at times, I use it as a =

beacon generator on HF as well. When I am lazy, I use my computer
to transmit CW via the box. =

Anyway, good luck to your venture in your advanced tickets. =

Best 73!

Message-ID: <336ECDCF.41B7@worldnet.att.net>
Source record: 176036

I have a Yaesu FTV-901R transverter with 2m and the optional 6m and 70cm modules in it. This unit works with Yaesu FT-901 and probably FT-902 rigs. Could probably be used on any 10m rig. Has offsets switch for FM repeaters and Oscar satellite modes (2m up/10 down etc). It is in original box with manual and all schematics. Physically it looks new inside and out. Not a scratch. I am selling it "AS IS" due to the fact it needs some work. I noticed on 2m the receive is very weak but xmit looks ok. On 6m has low output (5 watts) not sure about recv I don't have a 6m antenna. Never tried the 70cm module. I sold my 901 station and never had a reason to try to fix it since. Not sure if it is dirty relay/alignment or part tbl.
These units are very hard to find. Will sell the whole thing for $250.00 which includes shipping in Continental USA. One module is worth that much. It is really a "Mint" unit.

So Paul, I dont have the solution now !
Don't worry about it, it is just an adjustment to do,
but what to do ?
Can somebody tell us please ?

Subject: ATLANTA RADIO CLUB'S HAMFESTIVAL JUNE 21-22 1997

THE 69TH ANNUAL ATLANTA RADIO CLUB'S HAMFESTIVAL

The Atlanta Radio Club's Hamfestival on June 21-22,1997 is
the Southeast's premier hamfest.This hamfest is brought to you
by the Atlanta radio club,with the help of many of the local
radio clubs here in the metro atlanta area.This is our club's
69th annual hamfest,and with your attendance we hope it will be
our biggest and best to date.
This years event on June 21-22,1997 will be held at the
Atlanta City Hall East-Exhibition Center,675 Ponce de Leon Ave.This is
the same great site as last year's hamfest,which is near the downtown
area,and very easy to get to,and plenty of free parking.
On the days of the hamfest,we will be usings our clubs repeater
(W4DOC 146.82 Mhz minus 600Khz offset) on top of the Nations Bank for
talk-in.This repeater is used every Sunday night 8:00 pm for the
Atlanta Radio Club's net.If you are in the area your presence on the
net is welcomed.
For much more information about our Club and Hamfest plese check
out our web page at http://www.saf.com/arc.The club's BBS at
770-850-0546 has a lot of info also, or send email to dickb@akorn.net
our regular address is ATLANTA HAMFESTIVAL
P.O. BOX 942150,Atlanta Ga. 31141-2150
No matter what your interest in the radio hobbies are,you will find
you came to the right place.Amateur Radio,Shortwave radio,Scanners,
Satellite radio,Emergency radio,Marine radio,Military surplus
radios,etc.AM,FM,SSB,CW,PACKET,RTTY,SLOWSCAN,FAX,DX,ATV,AMTOR,EME,whatever
your interest this is the place to be.If your into building or
homebrewig equipment,radio or computer this is the place to find those
hard to find parts and gizmos.
The computer hobbies are doing better than ever and these interest
will be well covered at the Hamfest.
Buying,Selling,Trading,Swapping,Dealing,Bartering,Giving will all
be happening at the hamfest,probably some begging also.Whether your
coming with money to buy,a load of goods to sell,or just looking
around this is going to be a great hamfest.

The Atlanta Radio club has our regular meetings the first Thursday
of each month.These meetings are at 7:30 PM,located at the Georgia
Power Fedral Credit Union, 4900 Ashford-Dunwoody Rd.this is near the
I-285 loop on the north side of the city.
The Atlanta Radio Club is a non-profit organization wishing to
promote Amateur radio to all interested.

From: k5dh@qsl.net (Dean Hemphill, K5DH)
Subject: FS: Heath HW-32 20m SSB monoband xcvr

For Sale:

Heathkit HW-32 20m SSB monoband transceiver, 14.200 - 14.350 MHz USB.
Physically in good shape, very little wear on the front panel.
Electrically, it's basically functional (I made a contact on it).
Needs three tubes I donn't have on hand (one each 6BE6, 6EB8, 12AT7).
All other tubes have been tested and are good (including driver and PAs).
No modifications that I can spot (had a BNC installed on rear panel,
which I removed, leaving an empty hole, but that was all I found).

Original manual, power supply cable, and a non-matching mic included.

This rig WILL require some work, but it is basically functional.
Consider it to be a "project radio". It is NOT for the beginner!

Requires one of these Heathkit power supplies (NOT included!):
PS-10, PS-20, HP-13, HP-23, HP-23A, HP-23B

Or build your own, with these requirements:
+800 vdc @ 250 mA
+250 vdc @ 100 mA
-135 vdc @ a few mA
12.6 vac @ 3.75 A

Price is $50. Buyer pays shipping (15 lbs from 75065).

From: GZGQ49A@prodigy.com (Rodney Wallberg)
Subject: Illeagal Transmission

Same type of thing happened to me a few years back. I was monitoring on
scan on my two meter base and it stopped on 52 simplex. I stopped the
scan and listened but no one ever gave their call sign. Now this has
happened before but this time I heard it so I got in to my car and
monitored from there,
I drove near the highway and as the sigs became louder I disconnected
the antenna and spotted them driving by. I followed them for a bit and
could see that they had dealed plates on the cars and it seems they were
transporting cars aross some distance. I still monitored them and not
once did they give their call signs and ignored my asking of them who
they were.
This does happen from time to time but what to do???

From: sba3020@InfoNET.st-johns.nf.ca (Carl Hodder)
Subject: Old Hartman Transceiver info needed.

I would like to know about a Hartman Marine Model 3059 tube
Radio Telephone transceiver. It looks very old but don't have
any dates in mind. Looks old and I was told very rare.

The radio is very strange in that not only is it a 4 channel
marine transceiver but receives the AM broadcast band from
550 kHz to 1600 kHz. It also has two strange triangle marks
on the AM dial.

Can someone fill me in on this radio and or the Hartman Company.

Radio looks like a table top radio with four feet on the bottom,
this is not a rackmounted type radio.

That's different. That is DTMF signaling. CTCSS is use of a continous
subaudible tone to open the squelch of the intended receiver.

Since I had a hard time finding any substantiation of this from the FCC's website I wrote to the folks at Premier and asked them to confirm this. Here's their reply, which should quiet the rumors for a few minutes, I hope:

>if so, is FCC type-approval in any sort of question?

There is absolutely no truth to the claim that the FCC has taken any legal action against either PREMIER Communications or ADI. The U.S. version of

the AT-600 is perfectly legal in this country. Neither the receiver type acceptance nor the importing certificate for the radio have been pulled by the FCC. The AT-600 continues to be imported.

This confusion began last month when we began to enounter some CPU trouble with some of the AT-600s we had shipped (one of the batches of CPUs the factory had bought was found to be defective). We asked our dealers to perform a limited recall of the radio so we could check each for one of the defective CPUs.

Our limited recall closely followed the removal of the HTX-204 by Radio Shack, but the two events are, to my knowledge, completely unrelated. One of the AES salesmen has been telling customers that the radios lost their type acceptance, but this is untrue. I was at the AES SuperFest show over the weekend, and I encountered that same salesman then. I spoke to the management of AES (who never told their salespeople that the recall was because of FCC legal problems) and the problem has been corrected. No one there will be spreading that disinformation again.

>Thank you for your time, I'm sorry if you're flooded with this sort of query
>right now. There's a lot to be said for the quick spread of information by
>USENET, but there's also a lot of misinformation out there, too.
>
>Tom Russo KC5ZYC WWW:http://www.swcp.com/~russo/

You are quite correct, Tom. The Internet is a good tool for disseminating information quickly, but is also a great way for rumors, misinformation, and lies to spread rapidly. As always, the information is only as good as its source.

By the way, below is some information on the AT-600 / HTX-204 straight from the PREMIER Communications FAQ that is on our webpage. This is the company's official stand on the situation.

* * *

Q: Didn't you make the HTX-204 for Radio Shack?
A: ADI Communications Corporation manufactured the HTX-204 handheld for Radio Shack. However, PREMIER Communications has nothing to do with this arrangement. Both PREMIER and Radio Shack bought their radios from the same factory, nothing more. PREMIER does not offer any technical support for the HTX-204.

Q: What's the difference between the AT-600 and the HTX-204?
A: The two radios are indeed very similar. However, the AT-600 has a number of features that the Radio Shack does not, including wired cloning, PC programmable, auto power on, programmable VFO range, battery voltage indicator, DTMF decode, and 200 memories in non-alphanumeric mode (as opposed to 120 for the Radio Shack version).

Q: Are accessories for the AT-600 compatible with the HTX-204?
A: Generally, yes. The radios both use the same batteries and chargers, and the same microphone and speaker wiring schemes. Since both radios are

physically similar they also can use the same protective leather cases.

Q: Why did Radio Shack recall the HTX-204 and how does the recall affect the availability of the AT-600?
A: PREMIER Communications has no knowledge of why Radio Shack recalled the HTX-204. Officially, they claimed that they were "concerned that the radio could be used for illegal purposes." What their exact concerns were is anyone's guess.
Some of the initial AT-600s did have some minor CPU problems. It is possible that Radio Shack recalled the HTX-204 because of some related problems, but it seems unlikely. The recall does not affect future shipments of the AT-600. There have been some minor delays on ADI's production line, but production is proceeding at full speed.
It is not known whether Radio Shack will be reintroducing the HTX-204.

Subject: SX-99 Schematic Needed

I am in need of the schematic for a Hallicrafters SX-99 receiver. Some of the capacitors have leaked, and with Dayton coming up, it is a good time to lok for replacements. Unfortunately, I can not find the schematic! Any help would be greatly appreciated.

Subject: TS-850s power question

Please REMOVE nospam when replying!

I see that you can very easily adjust the output power on the TS-850s.
Judging by the transistor types used, it seems to me that it would be
safe to set it for 150 watts output (using a heftier power supply than
the standard one, of course).

The question is: is this likely to damage anything, shorten the life of
the final transistors, etc.? The 850 is used mostly for CW (and yes, I
know it's just 1.7db).

Subject: 50.400 AM

Well it's time to get the AM gear warmed up.

Starting today I'll be out on 50.400 AM

I'll be on at 19:00-19:30 PDT Monday and Thurs.

If there is a opening around 16:00 PDT then I'll be
on as soon as I get home from work Mon - Fri!

Hope to hear from a lot of you.

I have received a lot of e-mail from all over the country
and Canada in full support of this test.

Be sure to check out my web page for current info.

http://www.geocities.com/Hollywood/5860/50am.html

Also send me e-mail of your QSO's and I'll post them on my page!

As I recall from talking to my Aviation Repairman about the radios in my airplane, your statements are misleading. First, the regulation is from the FAA, not the FCC. Secondly, the regulation specifies frequency tolerance. While all of the radios with twice the number of channels meet the regulation, many of the older radios do not. It happens that the 300 series radios in my 1977 Cessna both meet the regulation; one is a 720 channel and the other is a 360 channel. Whether a radio meets the regulation depends on the particular model in a series and not how many channels it receives.

Regards,
Dave

Subject: Any Out There? Seeking Sources.

NewsGroupers,

Can anyone provide me with a source (sources) of PC board based exciters which utilize Windows software for control? Output need be only <1w. Frequency sought is fairly dawn-dusk (HF-VHF-UHF). We would assume that signal characteristics mandate a family of boards.

Any vectors? Suggested other NGs to post to?

TIA
Rip

I have Gates Cyclone 12VDC, 2.5 Ah batteries.

These are packed six(6)to a case, each battery is 2VDC. They are
soldered, and with a short molex male connector(sorry I am not up on
molex names or specs).

They were in storage for two(2) years, but never used. I have charged
them up and they all retain a charge.

$10 + $1.00 shipping. If you like the battery send the $ 11.00 later.

Subject: Help with moto programming...

No, this isn't another one of those requests for bootleg software....
I need a little help programming a Moto Saber VHF. The radio is
quoted as having a 148-174 bandsplit and the RSS will allow
programming to 147, however I'm looking for a way to get down to 144.
I've been told that the code created by the RSS could be edited to
allow out of band operation. Can anybody shed some light on this?
How it's done. Does it work? Are there any other ways of achieving
the same goal? Any and all information appreciated!
Thanks!
Jay

From: "Robert A. Kile" <midnight@bighorn.accessnv.com>
Subject: IC-706 Mark II upgrade

It would seem that some sort of upgrade path would be logical for the
IC-706 and for many other HF transceivers on todays market. In the case
of the IC-706 however several boards would need changing. The PA, LPF,
RF BPF, Control and display units to name a few.

It is unfortunate that the dwindling HF market could only sustain the
original IC706 for a little over a year. A far cry from TS-520 and

FT-101 days which carried for almost a decade.

I've suggested for a long time that manufactures should try improving upon good designs by releasing improved models with noticable changes and enhancements rather than complete new designs. The catch-22 is that with advancing technology it is more often cheaper to engineer a radio with new devices than to re-engineer a radio with no longer available components. Our equipment market is driven by consumer products which are here today gone tomorrow.

From: vidgames@netcom.com (Andy Eddy)
Subject: Misc for sale

I have some radio gear that comes from a relative who was an Advanced and
is now an SK. Much of it is pretty old. I'm interested in getting rid of
it now, but have no idea how much it's worth. If anyone wants to buy any
(or all) of this stuff, I'd appreciate it if you could send me an e-mail
at vidgames@netcom.com (unless someone has a better idea), and I'll take
the best offer; e-mail for more information and I'll do what I can. I'm in
the San Francisco area, so please take into account that I'll add shipping
to your location to your bid. Oh, this gear is in very good shape
physically, though I don't know how well it works electronically. Judging
by the meticulous habits of the owner, I'm sure it's fine. Obviously, if
you're also in the SF area and can pick it up, shipping won't be a problem
and you can eyeball the units yourself--especially the unidentified
pieces (and there are some assorted pieces not on the list below).
Thanks...

2863. Any Out There? Seeking Sources.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: ripr@pipeline.com
Message-ID: <336e96ff.34496543@news.pipeline.com>
Source record: 176048

NewsGroupers,

Can anyone provide me with a source (sources) of PC board based exciters which utilize Windows software for control? Output need be only <1w. Frequency sought is fairly dawn-dusk (HF-VHF-UHF). We would assume that signal characteristics mandate a family of boards.

Any vectors? Suggested other NGs to post to?

TIA
Rip

2864. Re: HTX 202 Lithium Battery replacement

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: mikekb2ufs@aol.com
Message-ID: <19970506124101.IAA28509@ladder01.news.aol.com>
Source record: 176049

I have replaced the Lithium battery in a friend's HTX-202. You may be
able to find a similar battery with radial leads somewhere and just solder
it in. What I did was buy a lithium battery holder from RS and slip in an
ordinary CR2032 lithium cell (about $2 at Walmart). I stuck it on the PC
board with double-face foam tape, soldered the leads to the wires, and
applied some electrical tape to the top of the assembly should it ever
come loose.

(My first attempt was to solder >directly< to the lithuim cell, as I've
done with NiCads-- >>> DO NOT TRY THIS!!! <<<
The cell exploded, of course! Fourtunately I wear glasses.)

Can you help??

I have a CES (Winter Park, FL.) 700L *Touch-Tone Microphone.

**Do you have the Color Code for this Mike??

The Mike now has a connector for a GE-MVS series radio.

I contacted the company but they want $25 for a photocopy of the
manual! At present the mike has a 8-pin Molex connector for GE~MVS.
I would like to convert the Mike it to work on a KENWOOD UHF Radio.
The Kenwood has a connector that looks like a modular telephone
connector (only more pins)... I plan to build a junction box.

I HAVE data for the Kenwood Mike Connector, but I need data for the
CES Mike!... While I would like to convert to a official CES Mike
Cable for Kenwood, the cost is another $25! Plus, CES advised that
the Mike would require modifications.

Any help with this project will be greatly appreciated! Any help with
the switch on the back of the Mike, "AUTO" / "MANUAL"?

Many thanks!
Tony

I have three LASER pointer pens for quick sale at $35, which includes shipping via US first class mail. These are metal cased lasers about the size of a standard pen and last about six hours on 2 AA batteries. You can see them for 200 yards or more at night.

Please email me at n7ln@qsl.net for more information. I can hand deliver them to the Provo/Orem or Salt Lake City, Utah areas.

2877. Lithium & NiCd battery replacement caution

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5knqk1$ou5@dailyplanet.wam.umd.edu>
Source record: 176062

Batteries, in general, DO NOT like being soldered to.

"So how do they get those little solder tabs on 'em?"

Any good battery pack fabrication shop will have an
arc welder. It runs a high current through a piece of
metal, such as the terminal of your battery.

If another piece of metal is placed on top before
current is applied, POOF, they melt together and
you get a solder tab.

Battery fabrication places will generally add solder
tabs for 25-50 cents apiece. And they sell Lithium
batteries for HALF what Radio Shack sells them for.

>situation (bad pun intended)? <g>

They all start to flicker after a bit of use, it's inherent in the type of lamp used. Unless it annoys you, ignore it.

The hum is a different matter. It may be real AC hum, or it may only *sound* like AC hum while really being RF getting back into the supply and upsetting the regulator. The latter is more likely the case.

Take a look at your station layout to make sure you aren't inadvertently offering your power supply as an auxillary antenna to your transceiver, IE make sure you aren't running a "hot shack" due to imbalances in your antenna feed setup.

You can also try a Radio Shack snap on choke on the DC leads very close to the supply, and try putting a 0.001 uf cap across the DC terminals of the supply.

If you really have AC hum, it should be apparent on received signals as well as on your transmitted signal. You may need to load down the supply to make this apparent, however. A 12 volt automotive trouble light makes a nice load for the supply to test this. If it really is AC hum, you'll need to replace the filter capacitors. They're the big "cans" inside. They are wired into the circuit with screw terminals, so you don't even need a soldering iron to repair this. You can use generic capacitors (observe working voltage), but for a good mechanical fit it will be better if you replace them with exactly the same make and model as the originals.

>550 kHz to 1600 kHz. It also has two strange triangle marks
>on the AM dial.

I can't tell you much about the radio except to note that the 4 channels
are probably in the 2 MHz area. But I can tell you what the triangles
meant. These marks indicated the CONELRAD frequencies on the
AM broadcast band. That was the emergency warning system used
before the EBS (now EAS) system was put in place. In the event of
a nuclear attack, all stations were to go off the air after instructing
their listeners to tune to the CONELRAD frequencies. These frequencies
would be used by stations in rotation, at varying power, and without
giving location or identification, to pass warnings to the public.

The idea behind this system was to deny the enemy known radio
stations which could be used as navigation aids by enemy bombers.
The advent of intertial guidence systems and ICBMs made this
system obsolete.

This does date your radio as being manufactured sometime in the
1950s.

2881. Yaesu FT-920 Info

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: hershman <hershman@ix.netcom.com>
Message-ID: <336F8575.514@ix.netcom.com>
Source record: 176066

Just got some more info on the Yaesu FT-920 HF-6 meter radio.
The radio is double conversion except FM which is triple.
The if stages are 70 MHZ and 8.8 MHZ.
You have to pay extra for FM I assume It costs the same as the FT-840
option $62.
You also have to pay extra for a AM filter $120. If it is the same as
the
one for the Yaesu Ft-840.
You can also ad a cw filter in addition the AM filter. There is no SSB
narrow filter available. I guess Yaesu feels you should use the DSP for
that.
The radio features "DUAL frequency watch". This feature is Not the same
as DUAL RECEIVE. Dual Watch means the radio will go check on a second
frequency every "so many seconds". You can't listen to two stations at
once.
The radio is more similar to the Kenwood TS-570S than the ICOM 756.
That is my two cents worth, Steven Hershman NS1R

Or, as the manual for my Taiwanese clone computer monitor pithily puts
it: "Keep off the capacity transformable or magnetic." :-)

I don't think the FCC does much enforcement. Look at K1MAN broadcasting
on
multiple bands. The other night his equipment was operating so poorly
he was
splattering all over 75 meters. This has been going on for a couple of
years.

2889. HELP CTCSS Board FT-2500

-The hum is a different matter. It may be real AC hum, or it may only
-*sound* like AC hum while really being RF getting back into the supply
-and upsetting the regulator. The latter is more likely the case.

Make sure your radio is not sitting on top of the supply (or directly to
the left). I've seen many cases of coupling between the power transformer
in the supply and something in the radio causing hum.

I want to buy a 70 to 80 ft. Trylon or Rohn self supported tower.
Something that would handle about 20 sq.ft at the top.
I am located in Toronto, but will arrange transportation in Northern
States and Canada wide.
If in Ontario will consider taking down.
Will trade for various equipment or straight cash.
Contact Ed at e-mail:emontana@aracnet.net
Phone 416-438-5115, fax 416-438-3315.
73's from

2893. Motorola Saber Custom Case

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: lui@netcom.com
Message-ID: <luiE9ryo0.M9s@netcom.com>
Source record: 176128
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I'm looking for a case for my Motorola Saber HT that covers the entire radio. I'm thinking about a custom case constructed out of padded cordura or maybe leather with a clear plastic window for the display, and a grill for the speaker, and maybe some openings for the PTT, etc... The top can be open for access to the controls.

I plan to use the radio with the speaker mic if I'm carrying it, so a basic rectangular case is an acceptable, though less desirable option.

Does anyone know of a company that sells such a case or will custom make something? I know Motorola has a case, but that only covers the bottom half of the radio.

Stephen

2894. FS: Packet modem -- $25!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: cobra295@ix.netcom.com
Message-ID: <5kodk8$p9a@dfw-ixnews3.ix.netcom.com>
Source record: 176129
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FS: Packet setup for $25 + shipping

I have for sale a Bell 202 modem, plus all the parts
and instructions to put this on the air for packet
use. It works much like the new BayComm modems, and
in fact uses the same software. The modem is external
and plugs into the wall. All parts are included to
wire your HT or mobile radio. Basically, the only
thing you have to do is create the cable to go from
the modem to the radio using the supplied components
to detect the PTT and feed the audio. Also a regular
old 25pin cable is needed for between the computer
and the modem. You don't need to be an EE to figure
out this little homebrew project, but a simple knowledge
of soldering, etc. is suggested. A good amount of literature is
included with articles from ham radio magazines as well as
schematics on how to make the patch cable. I'm
reselling this item as I bought it myself a few months
ago for the same price. I plugged in the modem to the
wall, and it turns on and appears to work fine. After
I received the equipment, I never got the chance to
make the cable and get it on the air since. At this
point, my packet connections on the radio are being
used by an autopatch, so I don't really have the means
to use this item conveniently. It can't compete with
high-end TNC's, but hopefully someone else
can use it to get started on packet for a low price.
Included is the software, modem, parts, literature, and
schematics. I ship only USPS, and only in the CONUS
with a prepaid USPS MO. If you would like to purchase
or have a question, please email reply me. Thanks.

2895. SCANNERS FOR SALE---PRO 34, 2004, 2006, 2022 & 2030

2896. Help! FT990 20mt transmission problem.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: n3taw@aol.com
Message-ID: <19970506231101.TAA10652@ladder01.news.aol.com>
Source record: 176131

Help
I have a Yaesu FT990 that has a problem on only 20 mt.
It tunes and transmits perfect into a dummy load. But on two
different types of antena it gets very finicky as to how the
radio will operate. Somtimes the tunner tunes it fine (100w),
Other times it cuts back to (50 - 60w), And other time it shuts
the rig down. There have been no antenna changes, it just does not
like 20mt unless everything is perfect. All the other band tune & work
great. Has anyone else experienced this symptom on thier FT990
or know what this problem is and how to corect it?
I have checked the antenna & transmission lines and everything
is OK.

I'm sure it happens all the time. And nobody will ever know, because most
of this
usage is UHF low power, on splinter freqs.

Nobody is interfered with, nobody hears it, nobody really cares.

Probably as it should be.

2905. ALPHA 76

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-06 00:00:00 UTC
From: "Matthew A. Erickson" <kk5dr@io.com>
Message-ID: <336FE4B6.5458@io.com>
Source record: 176140

The ETO ALPHA 76A(pa) is quite likely the best amatuer HF amplifier ever made.(In my oppinion)

Reasons why;

(1) Simple, yet very effective design.
(2)Easy to maintain. (clean once a year, lube fan bearing once a year)
(3)Very effiecent, 70% typical, which means more of the power goes out the antenna, than out in the shack, as heat.
(4)Quiet, cool opeartion, even at full power, for long periods.
(5)The best ALC feedback system on the market, (you set it for max power, and forget it), the amp will never exceed that level you set, no matter what the drive is set at. (You must actually connect the ALC to the exciter for this to work)
(6)Desk top convinience, no bulking outborad power supplies to take up space, yet the amp delivers full legal limit power out.
(7)Easy to tune, set it up by number, never need to tune on the air again, after making up a "cheat chart".
(8)Little to no "parasitic" trouble, NEVER USE THIS AMP ON 12 METERS, without first modifing the Plate choke, or you will burn it up, (unmodified plate choke is resonante on 25 mhz). My 76 has never "spit" or "sputtered", on any band.
(9)Inrush current protection is standard, (long before most other manufacturers every put it in their amp).
(10)Grid & plate over current protection standard, (nearly "foolproof").
(11)Warm-up lock-out, you can't hurt the tubes while they warm-up, because you can't key the amp, till the warm-up period is comlpete.
(12)Many of these amps that are "old"(15+yrs), are still on the air, & still putting out full power, with the original tubes in them. My 76 has the original tubes in it and has been putting out full legal limit ++, since 1982.

These amps, give the owner the most "bang" for his buck, even an older ALPHA, can out perform most "NEW" amps.
This is my opinion, you may or may not share it.
No, I am not connectted to ETO in anyway, I just really like the ALPHA.

Then, of course, there is the indoor installation with the mag-mount antenna happily sitting on top of the metal power supply case. :)

I managed to get a couple of surplus Midland Land Mobile Radio HT's.
They
are marked as Model No. 70-254B. The case and general appearance looks
like
they came out of the same mold (exactly) as my Icom 02-AT. A look with
my
spectrum analyzer shows that they are UHF.

They have 16 channels, LP tone encoding, with a selectable priority
channel.
The 'beep' when you press keys sounds just like the Icom. The keypad has
different markings than the 02-AT, so it's not obvious how you would
program
them.

So, a few of questions:

Are these things actually made by Icom?

Does anyone know how to program these things?
Turning them on with the 'shift' key (func on 02-AT) and holding it
for
about 5 seconds generates a different beep, the display stays blank,
and
apparently nothing else works except the PTT, which gets the radio
back
into normal mode.

Are these things even usable (or modifiable) on 70cm?
If not, I guess I've got a few extra batteries for my Icom...

David, knock your self out. I spent a month of weekends on the 40M novice subband calling CQ about 10 years ago. I got exactly two responses. Neither stuck around the frequency long enough to make a log entry. QRS (could you please, please slow down?) is pretty much unknown also. And if you get sucked in by the wistful articles in QST about the benevolent Extra that cruises the novice subbands to lend a gently hand (or fist?) forget it. That is one of those urban myths that refuse to die. I suggest getting more code practice tapes, getting to 13 or 20wpm, and then forget all about how "swell" the code is and how the code folks are so nice (urban myth). Then use the microphone to actually talk to other people. Good luck, Brian/N0iMD

I have heard of a guy using a lead/graphite pencil for an antenna. Stuffed it in the hole of the female bnc connector on his handheld. He probably thought it was pretty cool, too. "Rig here is an htx-202 with a number 2 topped off with an eberhard eraser!" Good grief, we're talking about a utility vehicle here. Drill a hole, use a real antenna. Works better. Brian

> Danie zs6awk
> zs6awk@global.co.za

Subjectively:

The wide band FM is terrible - don't use it if you care about quality. I listen to the news on it from time to time and it's OK for that, but not great. You'd be better off with a very cheap small FM broadcast receiver. Rumours abound about the possibility of doing something about this, but I've not seen any hard info yet about how to do it, and there also seems to be a general consensus that you can't. (I'd be very grateful of any information from anyone who knows how, if you can).

Airband RX seems fine to me.

For tx on other freqs, you might want to look at
http://members.aol.com/aeimn/ft50/index.htm
Where there is plenty of information about mods etc.

I like the set, (but then you'd expect someone who'd bought the set to like it); some others don't.

Best wishes

Mark

2920. WTB 6 meter module for 767

2923. Add transverter interface to FT900AT?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-07 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <dgfE9u3vu.9w7@netcom.com>
Source record: 175774

The FT757 series had a really nifty transverter interface provision - transmit low level RF was brought out through a RCA jack, and the power jack of the radio had two +12DC inputs - one for the TX finals and one for the rest of the radio. The associated transverter had it's +12 input jack, and a +12 output jack that went over to the radio. When the transverter was activated, it would cut +12 off to the radio's finals, and switch the main antenna line over to the transverter circuitry. Therefore, the radio could not TX QRO into the transverter circuit. The FT900AT does not appear specifically to have this kind of capability, but I suspect it wouldn't be too hard to modify/add. Any ideas?

Thanx,

73 Dave WB0GAZ dgf@netcom.com

Hello Marty, imagine this scenario, "I just bought a brand new radio and
I didn't get any information with it..." The trick is to read.
Of course, I might have totally misinterpreted the post. Mike might
have really been asking, "I got this really slick handheld transceiver
from Radio Shack before they pulled it for FCC violations. How might I
go about jamming cellular phone calls? The how to info on this
undocumented feature (MS trademark) is not in the manual.
Brian

I had email to/from the company that is actually doing the work on this project. I put a bug in their ear that since they had the interface to communicate with the V7, gee, wouldn't it be a great way to make a cheap remote base? A single card computer talking to the V7 and all you would have to do is plug in a control receiver... simple and cute.

Major hint. The control head is just that, a control head. Four wires (ground, power, data in and data out) are all that will be used. Someone want to figure out how to interface it? Or make new software other than the cloning software?

Rick

2933. KU4J DxAlert

From: "Robert (Bob) Diaz" <cqbdiaz@pacbell.net>
Subject: Alinco DJ-S41T, 70cm HT, my first reactions.

After reading all the past postings for the Alinco DJ-S41 HT, I saw that almost
everyone was happy with their unit. The small size, light weight, and low cost

were exactly what I was looking for. I hope that my sons will get their Ham License soon. If so, this is the radio I'm going to purchase for them.

Well, 2 days ago I went to the local Ham Radio Outlet and purchased a unit for me.
The current price on this unit from HRO is $120. I assume that other stores will/are
offer the unit at around the same price.

While I've only had the unit for just 2 days, I though I'd share my first thoughts
about starting to use the unit.

With the 3 AA batteries, the DJ-S41T puts out about 1/3 of a watt of power. Before
I started uning the unit, I worried that this won't be enough power. I'm happy to
say that for my needs, 1/3 of a watt IS enough. I can hit a repeater up on the hill
that's over 5 miles away. According to the signal reports, my signal is coming in
100% clean. I havn't had a chance to see how far I can go with it, but I'll try it
out latter on. Today I did "hit" the same repeater from work. No one came back,
so I can't say how good/bad my signal was; however the signal had to travel over

20 miles to trigger the repeater. Not bad for just 1/3 of a watt.

The audio output from the unit is VERY good. In general, small speakers don't
produce a good sound, but this unit seems to be the exception to the rule.

The 1 page instruction manual is a bit thin <humor intended, but it's true>.
That would be my main gripe, but Bill Ricker, N1VUX has written a better manual
and posted it on the WEB. Here's the addres to this page:

http://world.std.com/~wdr/alinco.html

I live in the L.A. area where there's a lot of RF out there. My Radio Shack HTX-202
(2 M HT) ignores all the intermod noise; the Alinco DJ-S41T does not. This might have
been a problem, except that I discovered that when I fold down the antenna, the
sensitivity of the receiver is reduced. Thus, when the antenna is down, I don't have
a problem with intermod noise. Yet the repeater's siganl is strong enough for me to
pick it up.

I still have a lot of things to try with this unit, but so far, it's looking very
good. Keep in mind that this is a unit that sells for $120, don't expect lots of

features, like DTMF or PL for receive. If you're looking for a basic unit at a very
low price, I give the Alinco DJ-S41T a thumbs up.

If you'd rather use 2M, ALinco has a unit, the DJ-S21T that sells for $120 at HRO.
I saw the unit at the store. While I didn't try the 2M unit, it appears to be about
the same as far as power, size and features as the DJ-S41T.

Subject: Astron RS-20M problem?

I have an Astron RS-20M power supply that is only 18 months old. I
noticed recently that the light inside the on/off switch is flickering and
seems to be dimmer than before. I've also been told that by audio
sometimes has a hum to it. Is there anything I can do to "rectify" this
situation (bad pun intended)? <g>

This thing is just too heavy to send back to get repaired, and I'd like to
do the repair myself if anyone else has any thoughts or suggestions.
Perhaps this problem has already occurred to someone else?

Thanks in advance, and 73 de

Joe, N2NOU

-The hum is a different matter. It may be real AC hum, or it may only
-*sound* like AC hum while really being RF getting back into the supply

-and upsetting the regulator. The latter is more likely the case.

Make sure your radio is not sitting on top of the supply (or directly to
the left). I've seen many cases of coupling between the power transformer
in the supply and something in the radio causing hum.

Or, as the manual for my Taiwanese clone computer monitor pithily puts
it: "Keep off the capacity transformable or magnetic." :-)

Subject: HTX 202 Lithium Battery replacement

I have replaced the Lithium battery in a friend's HTX-202. You may be
able to find a similar battery with radial leads somewhere and just solder
it in. What I did was buy a lithium battery holder from RS and slip in an
ordinary CR2032 lithium cell (about $2 at Walmart). I stuck it on the PC
board with double-face foam tape, soldered the leads to the wires, and
applied some electrical tape to the top of the assembly should it ever
come loose.

(My first attempt was to solder >directly< to the lithuim cell, as I've
done with NiCads-- >>> DO NOT TRY THIS!!! <<<
The cell exploded, of course! Fourtunately I wear glasses.)

From: ham@w3eax.umd.edu (Scott Rosenfeld NF3I)
Subject: Lithium & NiCd battery replacement caution

Batteries, in general, DO NOT like being soldered to.

"So how do they get those little solder tabs on 'em?"

Any good battery pack fabrication shop will have an
arc welder. It runs a high current through a piece of
metal, such as the terminal of your battery.

If another piece of metal is placed on top before
current is applied, POOF, they melt together and
you get a solder tab.

Battery fabrication places will generally add solder
tabs for 25-50 cents apiece. And they sell Lithium
batteries for HALF what Radio Shack sells them for.

From: lui@netcom.com (Stephen Lui)
Subject: Motorola Saber Custom Case

I'm looking for a case for my Motorola Saber HT that covers the entire radio. I'm thinking about a custom case constructed out of padded cordura or maybe leather with a clear plastic window for the display, and a grill for the speaker, and maybe some openings for the PTT, etc... The top can be open for access to the controls.

I plan to use the radio with the speaker mic if I'm carrying it, so a basic rectangular case is an acceptable, though less desirable option.

Does anyone know of a company that sells such a case or will custom make something? I know Motorola has a case, but that only covers the bottom half of the radio.

Stephen

From: hershman <hershman@ix.netcom.com>
Subject: Yaesu FT-920 Info

Just got some more info on the Yaesu FT-920 HF-6 meter radio.
The radio is double conversion except FM which is triple.
The if stages are 70 MHZ and 8.8 MHZ.
You have to pay extra for FM I assume It costs the same as the FT-840
option $62.
You also have to pay extra for a AM filter $120. If it is the same as
the
one for the Yaesu Ft-840.
You can also ad a cw filter in addition the AM filter. There is no SSB
narrow filter available. I guess Yaesu feels you should use the DSP for
that.
The radio features "DUAL frequency watch". This feature is Not the same
as DUAL RECEIVE. Dual Watch means the radio will go check on a second
frequency every "so many seconds". You can't listen to two stations at
once.
The radio is more similar to the Kenwood TS-570S than the ICOM 756.
That is my two cents worth, Steven Hershman NS1R

The lights just do that. Don't worry about it.

Regarding the hum, I've occasionally found the filter capacitor
literally *loose*. Get a fair-sized Phillips screwdriver. You'll
find two screws fastening the circuit board to the top of a capacitor.
Make sure those screws are good and tight, and that they have
lockwashers between the screws and the circuit board.

Sorry, don't know a thing about the radio, but the two triangle marks on the AM dial indicate Civil Defense frequencies - I beleive that two AM freqs were designated for use nationwide back in the 60's or earlier, in the (then likely and widely anticipated) event that someone lobbed a nuke at us. I haven't seen those marks in a long time but remember them on the first transistor radio I ever saw. Maybe someone else can add more details.....

Subject: Help! FT990 20mt transmission problem.

Help
I have a Yaesu FT990 that has a problem on only 20 mt.
It tunes and transmits perfect into a dummy load. But on two
different types of antena it gets very finicky as to how the
radio will operate. Somtimes the tunner tunes it fine (100w),
Other times it cuts back to (50 - 60w), And other time it shuts
the rig down. There have been no antenna changes, it just does not
like 20mt unless everything is perfect. All the other band tune & work
great. Has anyone else experienced this symptom on thier FT990
or know what this problem is and how to corect it?
I have checked the antenna & transmission lines and everything
is OK.

From: Tim@uncle.net (Tim)
Subject: Is There Any 2 Meter AM Activity?

I recently purchased an Icom 706 and would like to dabble with 2 meter

AM or SSB. Do hams actually communicate in these modes anymore? I

never seem to hear anyone. Is this mode more affected by propogation

than others? The main reason I ask is that I have never heard anyone

on 2 meter AM or SSB. I never see this topic discussed so I suppose

the answer will help new hams other than myself. I live near Macon

GA and travel to Atlanta frequently with the rig installe in my truck.

Thanks for any replies. Tim

2 meter AM is just about dead. This is due to the lack of equipment, as all
of the modern "all-mode" rigs don't include it. With the advent of the 706 and
the rumored Yaesu rig comming, it may yet be back.

However 2m SBB is alive and well. It is mostly around 144.200 (the national
ssb/cw calling frequency). You will not hear much mobile as the signals
are usually horizontally polarized and 2m fm antennas are vertical. This is
about a 20db loss.

There are 2m ssb nets, and several times a year there are contests. To
me VHF contesting was one of the best things a ham could do. Why?
besides being relaxed, as no one trys for the rapid fire cw contacts
they do on hf, it is a chalenge.

Since VHF is basicaly line of sight and almost never bounces, you are
trying to commuicate by either bending the signals over the horizion or
"ducting" them in the tropsphere.

It can be done, I've personally had 300 mile and farther contacts on 2m ssb.

Geoff.

ATTENTION HAM RADIO OPERATORS: During my spring cleaning this past week I found
50 copies of the 1996 edition of the N2RWE Amateur Radio Modification Database which
is a software program that I created in 1994 and have updated yearly as a one-stop
source for Ham Radio and Scanner Modifications! The package contains over
1150 Mods and Service bulletins.

Asking Price: $10 SHIPPED!!

Info:

1996 Hamfest Leftovers!!! Hurry!!! Only 50 Copies Left!!!
Dealer/Volume Discounts Welcome!
Features:
- Over 1150 Entries!
- OVER 1000 MODS for Ham Radio and Scanner Equipment!!!!
- Over 100 Service Bulletins!
- Fast Retreival with the Easy-To-Use Database Software!!
- Database Software Allows On-Screen Viewing, Printing, and Exporting
- Version 5.01 - 1996 Edition
- Printed Documentation
- 1996 Hamfest Price $15
Mods Available for Over 20 Manufacturers Such As:
- Icom
- Yaesu
- Standard
- Alinco
- Realistic
- Bearcat
- Regency
- Kantronics
- AEA
- Azden
- Many, Many More!
Requires:
- DOS 3.3 or Higher
- 640k RAM
- 4 Megabytes Free Hard Disk Space
- 3.5" Disk Drive

I'd you'd like to get one, or for more information please
visit my web site at http://mypage.ihost.com/unitedsound
or e-mail me at srwhite@ibm.net

If you're a dealer and would like to sell these copies at a
hamfest, the price for 10 is $50 ($5 ea), for 20 the
cost is $80 ($4 ea) and shipping is free!

Thanks,
Steve White

Sorry, don't know a thing about the radio, but the two triangle marks on the AM dial indicate Civil Defense frequencies - I beleive that two AM freqs were designated for use nationwide back in the 60's or earlier, in the (then likely and widely anticipated) event that someone lobbed a nuke at us. I haven't seen those marks in a long time but remember them on the first transistor radio I ever saw. Maybe someone else can add more details.....

2963. Adjusting Mic Gain for SSB on a Kenwood TS-430S

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-07 00:00:00 UTC
From: jmclaugh@cscc.edu
Message-ID: <863041241.1012@dejanews.com>
Source record: 176000
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am realatively new to working any HF (I just passed my 5 WPM 2 weeks ago) and am trying to learn how to work 10 M SSB. I am pretty sure my SWR is ok (don't have a meter or tuner yet. I am waiting until next week and am going to pick one up at Dayton Hamvention). My question is that I need to adjust my mic gain so that I can lower the power out to about 200 Watts PEP. According to the rig's manual, you do this with the mic gain. I know this is really hard to do with out a power meter, but even if I can get it close (say 190 or heck even less), that would work for now. Also, does the Carrier Knob do anything on SSB?

I'm experimenting with an Icon FA-S270A antenna on my Yaesu FT50R. So far
it seems to preform adaquately. Does anyone know what Icom uses the
FA-S270A for in it's product line.

The following is for sale as a package:

*) Yaesu FT-530 Dual-Band Handheld (w/ antenna, battery, charger,
manuals, etc.)
*) VOX Headset for above
*) Soft Case for above
*) Car adapter for above
*) Speaker-Microphone for above

The above equiment will sell at $395 or best offer. It is in excellent
condition with no severe blemishes on the case. It has been inspected by
several local hams, and has received high marks. This is a great deal!!!
(shipping is negotiable)

Neil, FYI:

In the late 70's I got a 4-digit digital display from an outfit called Torrestronics, somewhere in Ohio. This display measured only kHz and 1/10ths of kHz. The idea was that your "main tuning" dial or bandswitch showed MHz anyway, so why pay for the circuitry and additional digits to display MHz?

You hooked it to the local oscillator or VFO of your receiver or transceiver. It had a two sets of DIP switches which you programmed to your 1st IF frequency (10000 - IF, actually). Which set was in effect was controlled by a two-position switch on the front panel. I used one for CW/LSB and the other for USB.

Yes, it could be off a couple hundred Hz due to variations in crystal frequency, but you could easily figure this out by calibrating to WWV or another known source.

I used this unit for years, on a Hallicrafters SX-122A and a Drake B-line. It was simplicity itself--one connection to the radio through a spare jack and a disc capacitor, plus AC power. The unit still works--it and the SX-122A is on semi-permanent loan to a non-ham friend who listens to shortwave broadcasts.

I mention this only because it might be a simpler, more economical and less radio-invasive approach that would work for some people. It sure took the sting out of using those old main tuning/bandspread general coverage receivers, and made my old Drakes feel like a synthesized transceiver (without the phase noise :-)

Of course your concept counting the signals and adding/subtracting them as the radio does is more accurate, and takes into account BFO offset.

73,
Peter - KD7MW

2979. earn FREE digital display

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-07 00:00:00 UTC
From: Neil Heckt <neil@aade.com>
Message-ID: <3370F582.18AF@aade.com>
Source record: 176016

Many customers have requested a version of my Digital Frequency Display
(see May QST or web site below) for use to upgrade older equipment with
analog dials to digital dials.

The type of equipment which would use this consist of a crystal
controlled band switched converter (first LO) in front of a tunable IF.

Noteable examples (which I already know how to do) are the Collins
S line, the FT101 and TS-520.

I have developed a version that can measure up to three frequencies
and compute and display the RF frequency. The maximum limit on
any of the three frequencies is 50MHz.

The unit measures the crystal frequency, the tunable VFO frequency and,
optionally, the BFO frequency. IT then computes the RF frequency.
If the BFO frequency is available it will compute the actual carrier
frequency of SSB signals or the zero beat carrier frequency of CW
signals. As a function of the BFO frequency it will display the mode
USB/LSB/CW or AM.

What I need is people with older equipment that falls into the above
catagory who are willing to supply some initial information necessary
to design the electrical interface and then engineer the modifications
necessary to the unit to bring out the signals.

The initial information consists of:
1) the schematic and hopefully block diagram of their unit
2) the p-p voltage levels of the crystal, VFO and BFO signals
3) the main IF frequency
4) the frequencies of the crystals, VFO and BFO.

Togather we would plan and execute the modifications necessary to
bring out the signals to connectors. For example the FT101 signals
are tapped at PCB connectors and routed to spare pins on the auxillary
socket on the rear of the unit thru RG174 cable. The Collins S line
has these signals on the rear panel at RCA jacks.

If possible, power between 8 and 18volts at 20ma. or less should
also be brought out of the unit. In some cases it may be possible
to bring out a filament AC voltage which I can rectify.

You would then have to write the modification instructions and if
possible photograph them. I can use photographic prints or video
tape from your camcorder. (I have a flat bed scanner and a snappy
video capture unit).

In return for your effort you will receive one of the display modules
and credit for the modification instructions.

If your interested give me a call or e-mail me as shown below.

Thanks

Hi Perry -

I have one of those old "Atom Smashers." You can shorten the rubber band using an old trick we used with the drive belt on cassette machines.

Carefully cut the rubber band and then lay one-end over the other with an overlap. Make a diagonal cut with a sharp razor blade through both ends of the rubber band at a point which gives you the length you need.

Now carefully "crazy glue" the two ends together.

73,
Jay

I spoke with Kenwood's Technical Representative today and he related that within a week or so - perhaps in time for the Dayton Hamfest, Kenwood will have a Windows 95 program that will allow file uploads and downloads from the TM-V7A. It will enable alpha numerics for and load the memories with frequency and PL tones. No other remote programmability is planned. The program is supposed to sell for $39.95 and use the data port & PG5A connector.

This will certainly take the pain out of loading memories - especially after a CPU reset!

Subject: Adjusting Mic Gain for SSB on a Kenwood TS-430S

I am realatively new to working any HF (I just passed my 5 WPM 2 weeks
ago) and am trying to learn how to work 10 M SSB. I am pretty sure my SWR
is ok (don't have a meter or tuner yet. I am waiting until next week and
am going to pick one up at Dayton Hamvention). My question is that I need
to adjust my mic gain so that I can lower the power out to about 200 Watts
PEP. According to the rig's manual, you do this with the mic gain. I
know this is really hard to do with out a power meter, but even if I can
get it close (say 190 or heck even less), that would work for now. Also,
does the Carrier Knob do anything on SSB?

Subject: ALPHA 76

The ETO ALPHA 76A(pa) is quite likely the best amatuer HF amplifier ever made.(In my
oppinion)

Reasons why;

(1) Simple, yet very effective design.
(2)Easy to maintain. (clean once a year, lube fan bearing once a year)
(3)Very effiecent, 70% typical, which means more of the power goes out the antenna, than
out in the shack, as heat.
(4)Quiet, cool opeartion, even at full power, for long periods.
(5)The best ALC feedback system on the market, (you set it for max power, and forget it),
the amp will never exceed that level you set, no matter what the drive is set at. (You must
actually connect the ALC to the exciter for this to work)
(6)Desk top convinience, no bulking outborad power supplies to take up space, yet the amp
delivers full legal limit power out.
(7)Easy to tune, set it up by number, never need to tune on the air again, after making up

a "cheat chart".
(8)Little to no "parasitic" trouble, NEVER USE THIS AMP ON 12 METERS, without first modifing the Plate choke, or you will burn it up, (unmodified plate choke is resonante on 25 mhz). My 76 has never "spit" or "sputtered", on any band.
(9)Inrush current protection is standard, (long before most other manufacturers every put it in their amp).
(10)Grid & plate over current protection standard, (nearly "foolproof").
(11)Warm-up lock-out, you can't hurt the tubes while they warm-up, because you can't key the amp, till the warm-up period is comlpete.
(12)Many of these amps that are "old"(15+yrs), are still on the air, & still putting out full power, with the original tubes in them. My 76 has the original tubes in it and has been putting out full legal limit ++, since 1982.

These amps, give the owner the most "bang" for his buck, even an older ALPHA, can out perform most "NEW" amps.
This is my opinion, you may or may not share it.
No, I am not connectted to ETO in anyway, I just really like the ALPHA.

From: Neil Heckt <neil@aade.com>
Subject: earn FREE digital display

Many customers have requested a version of my Digital Frequency Display (see May QST or web site below) for use to upgrade older equipment with analog dials to digital dials.

The type of equipment which would use this consist of a crystal controlled band switched converter (first LO) in front of a tunable IF.

Noteable examples (which I already know how to do) are the Collins S line, the FT101 and TS-520.

I have developed a version that can measure up to three frequencies and compute and display the RF frequency. The maximum limit on any of the three frequencies is 50MHz.

The unit measures the crystal frequency, the tunable VFO frequency and, optionally, the BFO frequency. IT then computes the RF frequency. If the BFO frequency is available it will compute the actual carrier frequency of SSB signals or the zero beat carrier frequency of CW signals. As a function of the BFO frequency it will display the mode USB/LSB/CW or AM.

What I need is people with older equipment that falls into the above catagory who are willing to supply some initial information necessary to design the electrical interface and then engineer the modifications necessary to the unit to bring out the signals.

The initial information consists of:
1) the schematic and hopefully block diagram of their unit
2) the p-p voltage levels of the crystal, VFO and BFO signals
3) the main IF frequency

4) the frequencies of the crystals, VFO and BFO.

Togather we would plan and execute the modifications necessary to bring out the signals to connectors. For example the FT101 signals are tapped at PCB connectors and routed to spare pins on the auxillary socket on the rear of the unit thru RG174 cable. The Collins S line has these signals on the rear panel at RCA jacks.

If possible, power between 8 and 18volts at 20ma. or less should also be brought out of the unit. In some cases it may be possible to bring out a filament AC voltage which I can rectify.

You would then have to write the modification instructions and if possible photograph them. I can use photographic prints or video tape from your camcorder. (I have a flat bed scanner and a snappy video capture unit).

In return for your effort you will receive one of the display modules and credit for the modification instructions.

If your interested give me a call or e-mail me as shown below.

Thanks

I'm sure it happens all the time. And nobody will ever know, because most
of this
usage is UHF low power, on splinter freqs.

Nobody is interfered with, nobody hears it, nobody really cares.

Probably as it should be.

From: Tim@uncle.net (Tim)
Subject: Is There Any 2 Meter AM Activity?

I recently purchased an Icom 706 and would like to dabble with 2 meter

AM or SSB. Do hams actually communicate in these modes anymore? I

never seem to hear anyone. Is this mode more affected by propogation

than others? The main reason I ask is that I have never heard anyone

on 2 meter AM or SSB. I never see this topic discussed so I suppose

the answer will help new hams other than myself. I live near Macon

GA and travel to Atlanta frequently with the rig installe in my truck.

Thanks for any replies. Tim

From: CJ Johansson <"-.-. .---"@boi.hp.com>
Subject: Midland LMR: Any Info?

I managed to get a couple of surplus Midland Land Mobile Radio HT's.
They
are marked as Model No. 70-254B. The case and general appearance looks
like
they came out of the same mold (exactly) as my Icom 02-AT. A look with
my
spectrum analyzer shows that they are UHF.

They have 16 channels, LP tone encoding, with a selectable priority
channel.
The 'beep' when you press keys sounds just like the Icom. The keypad has
different markings than the 02-AT, so it's not obvious how you would
program
them.

So, a few of questions:

Are these things actually made by Icom?

Does anyone know how to program these things?
Turning them on with the 'shift' key (func on 02-AT) and holding it
for
about 5 seconds generates a different beep, the display stays blank,
and
apparently nothing else works except the PTT, which gets the radio
back
into normal mode.

Are these things even usable (or modifiable) on 70cm?
If not, I guess I've got a few extra batteries for my Icom...

Sorry, don't know a thing about the radio, but the two triangle marks on the AM dial indicate Civil Defense frequencies - I beleive that two AM freqs were designated for use nationwide back in the 60's or earlier, in the (then likely and widely anticipated) event that someone lobbed a nuke at us. I haven't seen those marks in a long time but remember them on the first transistor radio I ever saw. Maybe someone else can add more details.....

Hi From W6ELD:

I may be sorry, since I am a Tech (Whoops, Tech Plus), but I bought one of the subject rigs at a Hamfest/Fleamarket in Midland, Texas back in March. It has a so called "CAT" capability (No, I don't think this is related to "Computer Aided Tomotography").

My questions:

Does Yaesu offer software so a "standard" PC can control the thing?

What is a good program to send/receive CW on the puppy? I was up to about 17 wpm back in 1950, but settled for a Tech when they were offered in 1951. I _AIN'T_ going to try to get my code speed at age 70, but would like to try using a translation program, PC to RF, or whatever they are called.

Tnx 73,

Bob, W6ELD (Eleven Lazy Donkeys)

<G>!

Seriously, I've had the bolts that fasten the filter capacitor to the
circuit board get loose. In the short term this causes hum; in the
long term, it can actually damage the circuit board.

Luckily the fix is easy. Take the cover off the supply & make sure
all screws (except of course the one in the voltage adjust control!)
are tight.

I have a Kenwood TS-830S that comes from a relative who was an Advanced and is now an SK. I'm interested in getting rid of it now, but have no idea how much it's worth. If anyone wants to buy it, I'd appreciate it if you could send me an e-mail at vidgames@netcom.com (unless someone else has a better idea), and I'll take the best offer; e-mail for more information and I'll do what I can. I'm in the San Francisco area, so please take into account that I'll add shipping to your location to your bid. Oh, this radio is in very good shape physically, though I don't know how well it works electronically. Judging by the meticulous habits of the owner, I'm sure it's fine. Obviously, if you're also in the SF area and can pick it up, shipping won't be a problem *and* you can eyeball the units yourself. Thanks...

Beyond he basic lip service, nothing will likely happen. Your best

is to find a local group of hams that live in different parts of town

and try to catch him or her on the input. After you do that, do an

address search to find hams in the area. If that doesn't work don't

recognize the interference.

This equipment is only available for sale as a complete package !

PRS-6A includes:

Harris RF-590 Receiver
Harris RF-1310A Exciter
Harris RF-3466 High Speed HF Modem
Harris RF-110 1KW Autotuned Amplifier (2 x 4CX1500)
Harris RF-124 PS for above
Harris RF-551A Preselector
Harris PRS Test Panel
Bird 1KW PWR/SWR/Patch panel

Price: $4850 or best offer.
Serious inquiries only please.

Notes:
1. All equipment is in excellent physical and functional condition.
2. All original manuals are included. A seperate integration manual
is also included.
3. All original interconnect cables are included.
4. All equipment now wired for 230V AC operation. (Easily switched
to 110V AC with new fuse and internal or external selector)
5. All equipment is 19" rack mountable. All slides and mounting
hardware is
included. I do not have the rack itself.
6. Price does not include shipping from in Jerusalem,
Israel UPS or FedEx. The total weight is apprx. 250 kg. w/o packing
material. I was quoted FedEx General Cargo rate of $2.10/kg FOB to
JFK.

There is much debate over how often one should turn their computer off. Some say once a day, some say almost never and so on. Does anyone know how this applies to modern solid state rigs. Is it ok to leave them on for days at a time or even weeks? Is it better to power down everytime you leave the shack. What is the story here??

>program them.

ICOM private labled the U-16 for Midland. ICOM will not support these
radio, but Midland does. The 70-154 and 70-254 uses a stand alone
programming box to program accomplish the programming. The ability to
clone from radio to radio was removed during manufacturing.

> Are these things actually made by Icom?

Yes but you will need to contact Midland for support

> Does anyone know how to program these things?

Used a stand alone mocroprocessor controlled programmer

The IC-T21A 2 meter radio and T41A UHF radio. Both had a bonus band receive. the T21A could receive on UHF and the T41A could receive on VHF so both radios required a dual band antenna.

Does the rig have separate tuned circuits in the mixer and driver stages
for each band? If so, I'd suspect a failure somewhere in one of the 40m
tuned circuits which may be limiting the drive on that band.

I don't think so, but there are a number of freeware and shareware programs
available on the net which do. Look in the usual ham software sites. You'll
need a RS232 to TTL level converter. A MAX232 chip will work.

I don't know of a really *good* CW copy program, but Hamcom works.
It uses a simple opamp interface between the radio and the computer.
A good audio filter in front of the interface will help a lot. There's also
a program called FFTMorse which uses your sound card on your
computer to copy code.

If you aren't afraid of power surges, and you don't mind the electric bill, the equipment will last longer if it is constantly powered. We discovered this in broadcasting a long time ago. The vast majority of equipment fails at power-on, and the most common component to fail is electrolytic capacitors. They do much better with constantly applied voltage. Also, keeping the equipment powered prevents moisture from condensing in it. That reduces corrosion problems. (Of course if the equipment is in a conditioned space, that's not a big problem.)

<G>!

Seriously, I've had the bolts that fasten the filter capacitor to the
circuit board get loose. In the short term this causes hum; in the
long term, it can actually damage the circuit board.

Luckily the fix is easy. Take the cover off the supply & make sure
all screws (except of course the one in the voltage adjust control!)
are tight.

In May we (FCB) will come with a new logbook programm for
IBM compatible computers. It's a programm with for example:

* Regio number for Dutch cities in it, together with QTH locator
(new) and distance/angle to your station. (Almost) all Dutch
towns in it.
* Complete QSL registration. It sends for every band a QSL till
the other radiostation confirmed the band.
* See (for every band) if you have worked the radiostation in the
past and if the QSO is already confirmed.
* Holds name, place, info about transceiver, antenna, distance,
angle, locator, etc. of the other radiostation
This info is available during your QSO
* Have a look. during the QSO, to other QSO's you've made
with this radiostation in the past
(You can scroll without leaving the present QSO)
* Have your logbook on the computer screen or print it.
* Many other things

* Do use (in future) the options we'll intend to make for the
programm like: calculations, analysis for QSO's, worldwide
(or local) certificates, contest possibilities - these QSO's in
the logbook for QSL - worldcharts, etc.

For having satisfied customers, we'll only distribute a demo
version of the programm. You can use this for 100 (one
hundred) QSO's. (After registration - for a low fee you can
still use this first 100 QSO's)

The Dutch version will leave us in the beginning of May, the
English version in the end of May. (Please let us know if you
want to have other languages like French, German of Spanish)

You're also free to give a demo version to your (HAM)friends.
With your (demo) programm you can make a demo on diskette.

If you're interested, please do e-mail me at:

fcb@worldonline.nl

and receive shortly information or (if possible) the demo-
programm by internet (e-mail)

With HAM-greetings from FCB (Harlingen, the Netherlands)
Sipke (PA3CWR)

Hi, Its spring cleaning time and thus time to clean out the shack/computer
room of the stuff that doesn't get used enough (or at all)...

I have the following forsale/trade:

1) Icom R71a receiver with remote and manual - $450 obo
2) 2 unopened Kingston 32M parity simms (not EDO) - $350 obo (for both)
3) Archive 2G SCSI dat drive in external case - $250
4) Quantum 730M FastSCSI hard drive (internal) - $150
5) Fujitsu 512M FastSCSI hard drive (internal) - $100
6) 33.6Kbps modem internal (ISA) - $50
7) External SCSI 3.5" case (must be sold with #4 or #5) - $50
8) Apple Powerbook Duo 210 (upgraded to POWER PC)
800M drive, 16M ram, 19.2K modem, scsidock
16 grey screen, 3 batteries, 2 power adapters - $700
(older type "B" keyboard)

I'm looking in the following in trade:
1) Solid State HF rig (Icom 735 or better) accessories a plus
2) 2M/70cm amplifier
3) 2m/70cm base antenna
4) AOR 8000 or similar scanner

Thanks,
Josh Goldsmith

>
> Any help would be appreciated.
I don't know the details of the Gonset, but you might post the basic frequency of the crystals (8 mhz, 6 mhz, whatever) so we can peruse our junkboxes for you.
6 Meter AM activity was abysmally low back in the mid to late 1970's when I became a 6 meter enthusiast, and 6 was the lowest DX frequency for Technician licensees back then, and they constituted the majority of the contacts I conversed with. 10 Meter SSB is now the DX band of choice for many if not most Techs and I think this has impacted 6 meter activity.
SSB had become the dominant mode by the mid- 70's and I eventually succumbed to 6 Meter SSB by building a transverter for my HF rig and eventually converted an old SSB CB rig directly to 6 meters.
There are probably a few 6M AM nets still in existence, especially in the Midwest, and when the band gets really hot there are occasionally some AM'ers that come out of the woodwork. But I think you'll find they are quite few and far between.

isn't it similar to FT-200 FT-250 etc ?
I had an early FT-250 in 69. The fault John mentions occurred on 80m -
believe a 330uuF capacitor changed value in 80m driver or pre-driver
circuit, it was also a crystal problem on ssb (80m cw), believe one
ceramic value capacitor changed value in the carrier oscillator. I
cannot remember particular problems for 40m, but it is 27 years since I
had this rig... The AGC circuit looks like a copy of the Drake TR4.
DF7JE modified it similar to this, but I felt that it was not much
success in changing time constants in this order...

---

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;
important mail is much more likely to end up in the bit bucket
than junk mail, which has an almost 100% probability of getting
delivered. Routing to the bit bucket is automatically performed
by mail-transfer agents, news systems, and the lower layers of
the network.

3. The ideal location for all unwanted mail responses: "Flames
about this article to the bit bucket." Such a request is
guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those figures last week; they must have landed in the bit bucket." Compare black hole.

This term is used purely in jest. It is based on the fanciful notion that bits are objects that are not destroyed but only misplaced. This appears to have been a mutation of an earlier term `bit box', about which the same legend was current; old-time hackers also report that trainees used to be told that when the CPU stored bits into memory it was actually pulling them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of the `parity preservation law', the number of 1 bits that go to the bit bucket must equal the number of 0 bits. Any imbalance results in bits filling up the bit bucket. A qualified computer technician can empty a full bit bucket as part of scheduled maintenance.

If you have any questions or problems, please contact:

Brian,

I am sorry to hear your bad experience and deeply regret that
you feel left out by the "Extra Class" fists.

I guess you've missed my point here. I am not pushing people
to believe that CW and Extra Class are everything, rather, I am
merely trying to mention an option of getting the code tests
done. I made it in one way, but others might have made it in a
different way.

It's true that I love code; moreover, I also love that little extra elbow-room that advanced tickets can enjoy. Maybe it is me who like to go after a personal goal (Extra ticket in this case) or finding something that I think has batter resale value. It really doesn't matter! All we (HAM) care is to make QSO's and enjoy our hobby!

I shall leave the discussion on the existence of code test for other people to argue. I got my Extra ticket by passing the test because it is TODAY'S requirement. TOMORROW's requirement has itself to worry about. But for now, I play it by the rule. It's something I've earned and been enjoyed doing.

I know there are no-code fans out there, don't bother to flame me.

Best 73!

Is it known that the carpenter is using it on the HAM Bands?
Could have he done the MARS/CAP (xtended TX) mod and be using
frs or one of those business freqs like 154.6? If he is not using
the ham bands he is out of the hams' jurisdiction. If he is on band
and using the local repeaters, then the repeater owners have issue.
And the club (if one exists) should persue it.
Next time he's over, have your Optronics 3000A, Scout, Explorer
going when he TXs.

I happen to own a VHF/One Plus and have a schematic. All I need is an
address to send a copy to. I don't like to charge somebody for the cost
of copying it's not worth it. Besides you make friends quicker and
better if you do nice things.
Here's the pinout of ACC: 1 ground
2 Mic
3 PTT
4 Comes from relay contact K2(energized by SSB)
5 N/C
6 DISCR1
7 Speaker
8 V+(12 v)
9 Comes from power booster (Q1) and tied to pin 4 through
R4 68 ohm.
This might help until I get your address.
E-mail me, in the subject put Chuck
73's DE KC8FLQ

3037. Want discussion - others with ICOM 2/4 SRA's

Newsgroup: rec.radio.amateur.equipment

Source record: 175922

I have an ICOM 2SRA and I would like to find others who have
this same radio. I really like mine and I am having some minor
problems with it that I think are based on its design.

If you have one of these radios please drop me an e-mail
message, I would like to start a mailing list and also to discuss
some of the problems (and possible solutions).

Thanks
/Jim /N1CRZ

Thanks for all of the help with this rig. I got the advice I needed. Everything seems to be working now. I haven't made a contact on 10 M yet because of my work schedule (seems like the few openings there are now on 10 always happen when I am stuck in a computer room for 8 hours (work) Yuck!). 73, and maybe I will see some of you at Dayton next week!

Source record: 175924

I am in the midst of building a 1208 transverter, and have tested out
the receive portion recently -- it worked great with my Halli S-53!
(approx -127 dBm AM input at 50 MHz was easily audible).

After I finish building the transmit portion and checking it out, I'm
going to "move" the 1208 transciver IF from 20m to 10m, as I don't
have a 20m all mode rig.

If anyone else has done this with the 1208 kit, I'd LOVE to hear from
them. So far it looks to be pretty straightforward, but one never
knows...

I live near the L.A. area and I can't believe some of the things said and done over the air on 2M. It appears to be the same guys who have the foul mouth and no call sign. As for the jammers, I can't be sure, but it seems to be the same type of overmodulated tone almost every time and maybe just the same person.

Some of these guys are proud of the fact that no one seems to be able to touch them and the brag of their ability to jam others.

I believe that 99.9% of the Hams in the L.A. area are very considerate to each other. However this appears to be a case of a few bad apples who want to spoil it for everyone. Still, I day dream that it would be nice if all the Hams could band together in some sort of massive civil suit against the worst offenders.

I have three computers that have never been turned off in three years. I do turn the monitors off when I QRT for the night, but the CPUs and disks stay powered up. I find the thermal shock of heating/cooling/heating/cooling much more disruptive than simply leaving things warm and humming along.

Subject: BEWARE OF DEALINGS WITH Mark S. Conway

I had a simular experience.

A guy in New York, I won't mention his name because I don't mean to cause him any harm, and I struck a deal for some equipment.. The last I heard from him is that it was a done deal and he would ship by UPS blue label. Well, I had a check ready but no UPS man/woman ever showed up. So I emailed numerous times and now response from that individual who has an address at ibm.com....

I mailed a final email that asked for a courtesy response stating if he was going to send it or not. That way I could look elsewhere for the same product. I got absolutely no response.

Perhaps he lost my address, email address, and the phone number that I gave him. Hmmmm, sounds unlikely but I will give him the benefit of the doubt. My guess is that he got a better offer, which is FINE, but he could at least had the courtesy to let me know. There would have been no hard feelings.

Oh well. I guess not everyone has the same ethic and respect for fellow human beings that I do.

Just my 2 cents.

Franz in Tahoe

>actually talk to other people. Good luck, Brian/N0iMD

Brian,

I am sorry to hear your bad experience and deeply regret that
you feel left out by the "Extra Class" fists.

I guess you've missed my point here. I am not pushing people
to believe that CW and Extra Class are everything, rather, I am
merely trying to mention an option of getting the code tests
done. I made it in one way, but others might have made it in a

different way.

It's true that I love code; moreover, I also love that little extra elbow-room that advanced tickets can enjoy. Maybe it is me who like to go after a personal goal (Extra ticket in this case) or finding something that I think has batter resale value. It really doesn't matter! All we (HAM) care is to make QSO's and enjoy our hobby!

I shall leave the discussion on the existence of code test for other people to argue. I got my Extra ticket by passing the test because it is TODAY'S requirement. TOMORROW's requirement has itself to worry about. But for now, I play it by the rule. It's something I've earned and been enjoyed doing.

I know there are no-code fans out there, don't bother to flame me.

Best 73!

Subject: FT-51 cross band repeat?

Chuck,

The manual neglects to tell you to put the '51R in the "DUP" (duplex) mode first! Try this (<FM><9>) and crossband-repeat will work.

There are >several< things that are not mentioned in the manual. If you're scanning and come across an interesting frequency, how do you hang onto it, short of writing it down? Press <FM> and <VFO>, this will transfer the frequency to the last VFO used. This also works if you're using a memory channel as a "VFO" (MT).

Feel free to ask me if you have any other questions--I may have stumbled across an answer!

From: pcl36587@alfa.ist.utl.pt (Pedro Delgado)
Subject: HF Equipment comments wanted please

Hello everyone,

Being active on the 2 meter band for some years now, I've now decided to get an HF rig (read: I've finally saved some money for it :)).

I've been browsing through sites, catalogs, stores, and I've come up with the following list :

Maker Model Aprox price in USD

Alinco DX-70TH 969.95
Icom IC-707 759.95

Kenwood TS-50S 849.95
Yaesu FT-840 899.95

Now, all the manufacturer specs aside, I'd like hear from people that have actually used these radios - good/bad experiences, receiver performance as in sensivity and selectivity, stability of operation (has the pll lock ever failed on you while you used any of these models ?).

Receiver performance is very important to me...with all the signals you can get in the HF bands, and interference from strong adjacent stations, its no good to pay top $$$ for a radio if it can't receive well - of these models, which one do you consider to have the best receiver circuitry ?

The Alinco seems to be a very good buy...has FM and 6 meter band already included in the price - for the price, it looks too good to be true when compared with other rigs of the same price range.

The Icom seems to have a more sensitive and selective receiver.

The fact is, I know I can't get a Rhode & Schwartz receiver, or a Japan Radio Company quality equipment for these prices, but I'd like to employ my money in a decent rig that would last me several years, with a good quality service.

Thank you very much for taking the time to read this msg, and please reply by email as well as posting your replies.

Best regards,

Pedro Delgado /

> Any help would be appreciated.
I don't know the details of the Gonset, but you might post the basic frequency of the crystals (8 mhz, 6 mhz, whatever) so we can peruse our

junkboxes for you.
6 Meter AM activity was abysmally low back in the mid to late 1970's
when I became a 6 meter enthusiast, and 6 was the lowest DX frequency
for Technician licensees back then, and they constituted the majority of
the contacts I conversed with. 10 Meter SSB is now the DX band of
choice for many if not most Techs and I think this has impacted 6 meter
activity.
SSB had become the dominant mode by the mid- 70's and I eventually
succumbed to 6 Meter SSB by building a transverter for my HF rig and
eventually converted an old SSB CB rig directly to 6 meters.
There are probably a few 6M AM nets still in existence, especially in
the Midwest, and when the band gets really hot there are occasionally
some AM'ers that come out of the woodwork. But I think you'll find they
are quite few and far between.

I'll cast a vote for the Alinco. I've never used it but have heard
good things about the rig and I like that extra band of 6M.

[DELETED]

For the price around US$1000, I'll be tempted to look into the used
gear marktet for some rigs that are a little bit older but with more
bells and wistles.

The Kenwood TS-850 has one of the hottest receiver out there for the
longest time. It has been a good and solid perfomer in the
competition class. A local ham store has the rig selling for under US
$1200. You might find better deal if you look around.

Good luck in your search.

From: Peter Orban <Peter.Orban@nrc.ca>
Message-ID: <33730F07.41C6@nrc.ca>
Source record: 175828

I would like to thank everyone who commented on the HTX-202.
In summary it is a robust, simple 2m handheld, with no known problems
(except that recent thread on Error 2), with a tight front-end, and no
possibility of extending the range.
I will keep an eye open for one.

Thanks again, Peter

I happen to own a VHF/One Plus and have a schematic. All I need is an address to send a copy to. I don't like to charge somebody for the cost of copying it's not worth it. Besides you make friends quicker and better if you do nice things.
Here's the pinout of ACC: 1 ground
2 Mic

3 PTT
4 Comes from relay contact K2(energized by SSB)
5 N/C
6 DISCR1
7 Speaker
8 V+(12 v)
9 Comes from power booster (Q1) and tied to pin 4 through
R4 68 ohm.
This might help until I get your address.
E-mail me, in the subject put Chuck
73's DE KC8FLQ

Watch the fans though. All three of my computers run 100% of the time.
But, I have to replace fans now and then. When the fan dies, it gets a
little quieter, and the temp goes up in the box, lowering the life of the
components inside. If you aren't around and don't catch it, things can get
a little warm. Just "keep an ear peeled" for the fans.

You will also need to blow the dirt out more often unless you're in a
conditioned environment. The fans in question suck household dust through
every opening, including floppy slots, jacks (cdrom/modem), etc.

On the other hand, if you only use your computer once a week, shut it off.

Gary (the other one)

> indicate Civil Defense frequencies - I beleive that two AM freqs were designated for
> use nationwide back in the 60's or earlier, in the (then likely and widely anticipated)
> event that someone lobbed a nuke at us. I haven't seen those marks in a long time
> but remember them on the first transistor radio I ever saw. Maybe someone else can
> add more details.....

The two triangles represent 640khz and 1240khz respectively and were, as
previously stated, for Civil Defense announcements. All other radio
operation would be ceased in the event of a nuclear emergency. The
markings began in 1954 and lasted through 1963 radios, although some
imported units lasted a little longer.

3072. Ham Equipment Sale

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-09 00:00:00 UTC
From: dialta@aol.com
Message-ID: <19970509220300.SAA12703@ladder01.news.aol.com>
Source record: 175839

Following is a lists of Ham gear I'm parting with, do to an impending move. The prices are all negotiable, and I'm mainly interested in selling everthing on this list. Manuals and documentation furnished where available.

1. CDR Rotor Control Box. Series, 4516, for use with HAM-M rotators. $20.00, plus $5.00 shipping.

2. Complete RTTY, CW and ASCII digital station. INFO-TECH M-300C Keyboard that transmits RTTY, CW and ASCII at all normal speeds and shifts. INFO-TECH M-200F, RTTY/CW/ASCII Demodulator, that copies and outputs to video all standard speeds and shifts. Has printer support, etc. "Taxan" Amber phosphor Video Monitor. Complete system $200.00, plus $25.00 shipping.

3. "Digi-Designer" Work Station. Complete digital IC test and construction aid, with internal clock, (1 to 100K speeds), four logic switches, two pulsers, IC test and assembly block, and built in 110 VAC power supply, (TTL level voltages out). $25.00, plus $5.00 shipping.

4. Homebrew WB4VVF Iambic "Memory Keyer". $20.00, plus $5.00 shipping.

5. Homebrew WB4VVF Iambic Keyer, with built in clock, and 10 minute ID timer. $20.00, plus $5.00 shipping.

6. 5-Volt, 1 amp, "Calectro" Regulated TTL Power supply. $10.00, plus $3.00 shipping.

7. Six element 450 MHz Beam Anternna. $20.00, plus $5.00 shipping.

8. "Hustler" MO-2 Folding Mobile Antenna Mast. $10.00, $3.00 shipping.

9. New Kenwood PG-2 DC Power Cable. Fits TM201, 211, 401, 411, 2530/50/70, TR8400/9500, TR751, 7S670, R600/1000/2000. $5.00, plus $3.00 shipping.

10. Kenwood Mc-35S 50K Noise Cancelling Microphone. $10.00, plus $4.00 shipping.

11. Drake 7073DM Hand Held Microphone. $10.00, plus $4.00 shipping.

12. New Radio Shack Dynamic Hand Held Microphone, with 5-pin DIN type connector. $5.00, plus $3.00 freight.

13. Kenwood Dynamic Microphone, 500 ohm, 4-pin connector. $10.00, $4.00 shipping.

14. "CALRAD" D-350 Dynamic Desk Microphone, 50K impedance. $10.00, plus $4.00 shipping.

15. New Yaesu YM-23 Condenser Hand Microphone, with 4-pin connector. $10.00, plus $4.00 shipping.

16. "Swan" SWR-1A Power and SWR Meter. $15.00, plus $4.00 shipping.

17. "Siltronix" SWR-2, Power and SWR Meter. $15.00 plus $4.00 shipping.

18. Forty foot Rohn 25 Ham Tower, with HyGain TH-3 "Thunderbird" 1KW beam antenna. CDR "Tail Twister" Heavy Duty Rotor, and Control Station. Three element two-meter beam, and Ringo Ranger Two-meter vertical antenna. Pick up only in Rapid City, SD. Bargain priced at $700.00, firm.

19. HAL Communications PCI-3000, PC AMTOR Computer Board. Excellent digital communictions including RTTY, CW, ASCII and AMTOR. Fully functional, latest firmware, and full documentation. Bargain priced at $175.00, plus $7.50 shipping.

20. ICOM IC4AT 450 MHz Handi-Talki, with Speaker Microphone, two batteries, battery charger and extendable "DX" antenna. Package contains huge ICOM optional 2nd battery (13.8 volts), that could almost be used to jump start your car! Complete system for $100.00, plus $10.00 shipping.

21. Bencher ZA-1A balun. $5.00, plus $3.00 shipping.

22. Heathkit IT-741D Logic Probe. $15.00, plush $4.00 shipping.

23. Heathkit "Cantenna", 1KW Dummy Load. $15.00, plus $7.50 shipping.

24. Epson MX80/FT Tractor Feed Dot Matrix Printer, with roll paper adapter. $50.00, plus $10.00 shipping.

25. New "Pro-AM" two-Meter vertical antenna, (surface mount). $15.00, plus $5.00 shipping.

26. Sencore Digital Volt Meter. $10.00, plush $5.00 shipping.

27. "QST" Magazines. January 1974 through March 1997, complete, 288 issues. $50.00, plus $20.00 shipping.

28. "Ham Radio" Magazines. Bound editions for years 1976 and 1977./ $10.00, plus $7.50 shipping.

29. CW-1300 Oscilloscope. Military Surplus and makes good RTTY, AMTOR, Clover, etc., monitor. $10.00, plus $10.00 shipping.

> Don't depend on M$, use Linux for your HAM software AMATEURS FOR AMATEURS !

Can you give a pointer to a good distribution of Linux for hams?
Which distribution and where is it available.
I would really like something that is available on CD rom, has all the
ham and electronic goodies and doesn't require me to become a total
UNIX guru to get working.

Am I asking for too much?

michael N6CHV

3074. ICOM 756 vs Yasue FT-920

Newsgroup: rec.radio.amateur.equipment

I want to buy a 70 to 80 ft. Trylon or Rohn self supported tower.
Something that would handle about 20 sq.ft at the top.
I am located in Toronto, but will arrange transportation in Northern
States and Canada wide.
If in Ontario will consider taking down.
Will trade for various equipment or straight cash.
Contact Ed at e-mail:emontana@aracnet.net
Phone 416-438-5115, fax 416-438-3315.
73's from

3077. MFJ 259 vs Autek RF1

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-09 00:00:00 UTC
From: Bill Kullmann <kullmann@lion.documentum.com>
Message-ID: <33739C8D.152C@lion.documentum.com>
Source record: 175844

Hi all,

Can anyone contrast these two instruments for me with live experience?
I'm going to buy one of these soon.

Things making it the most difficult to decide are:

One, the Autek says it measures true Z, so you can tell if you need to
add L or C to complete match. Can you do this with the MFJ?

Two, the MFJ has meters which is better at seeing dips. One person told
me that you can miss the dips on a digital readout. How real/bad is
this?

Three, are there dip coils for the Autek, or can you easily make them?

I like both because:
1. frequency counter
2. swr
3. measure L and C components
4. Measure RF resistance

I like the Autek because:
1. it's $110 cheaper (129 vs 239)
2. smaller size (5 x 2.5 x 1.5 vs 4 x 2.5 x 6.75)
3. reads R + jX (instead of just Z)
4. Single range (vs 6 ranges (only 3 for same Autek range))
5. Seems more rugged (only from pictures)

Thanks,
-Bill

I like the MFJ because:
1. Dual meter display vs alternating digital modes
2. has dip coil accessory.
3. higher freq limit (170 vs 35Mhz)
4. 8 digit readout on freq counter (vs 4)

I just retired as production manager of the local daily paper, where among other things I was responsible for operation/maintenance of all computer systems - consisting of about 50 PCs and about 20 Macs. We *NEVER* turned them off, but did run screen savers on many of the color monitors. These sets would typically run about 5 years between failures, and most failures were cooling fans - followed by keyboards and monitors, then hard drives - in that order.

I think the key rule for an individual user would be that if your computer is used an hour or so EVERY DAY, it would be best to just leave it on - but some sort of surge protector is recommended. In this scenario, I would also leave the monitor on, but use a screen saver to even out wear and tear on screen coatings. There are mixed recommendations on merely turning down the contrast to darken the screen.

Oh yeah, by the way, those few computers in our business that WERE turned off regularly, failed MORE OFTEN than those left on continuously...

Message-ID: <3372692c.25867697@193.136.132.5>
Source record: 175943

Hello everyone,

Being active on the 2 meter band for some years now, I've now decided to get an HF rig (read: I've finally saved some money for it :)).

I've been browsing through sites, catalogs, stores, and I've come up with the following list :

Maker Model Aprox price in USD

Alinco DX-70TH 969.95
Icom IC-707 759.95
Kenwood TS-50S 849.95
Yaesu FT-840 899.95

Now, all the manufacturer specs aside, I'd like hear from people that have actually used these radios - good/bad experiences, receiver performance as in sensivity and selectivity, stability of operation (has the pll lock ever failed on you while you used any of these models ?).

Receiver performance is very important to me...with all the signals you can get in the HF bands, and interference from strong adjacent stations, its no good to pay top $$$ for a radio if it can't receive well - of these models, which one do you consider to have the best receiver circuitry ?

The Alinco seems to be a very good buy...has FM and 6 meter band already included in the price - for the price, it looks too good to be true when compared with other rigs of the same price range.

The Icom seems to have a more sensitive and selective receiver.

The fact is, I know I can't get a Rhode & Schwartz receiver, or a Japan Radio Company quality equipment for these prices, but I'd like to employ my money in a decent rig that would last me several years, with a good quality service.

Thank you very much for taking the time to read this msg, and please reply by email as well as posting your replies.

Best regards,

Pedro Delgado /
/ pcl36587@alfa.ist.utl.pt

Don't forget that the Yen has plummeted more than 25% after the original
706 came out.
So I would expect this 706 MKII to be a lot CHEAPER than what the 706 was,
there isn't THAT much changed to the radio.

If not, some fat cat is getting even fatter from your money, and we all
know who those fat cats are.

73, Loek

Erick everyone under the sun will have a different opinion about what they think is best but I really like the one I have. The reciever on it is not as good as good as the W2A that I just sold but the W32A has alot more features that I like and with hams wanting all UHF and VHF to be more broad banded the recievers on all brands will pick up more garbage than they use to. I wish they would offer these rigs both HT and mobile with ham only bands so they would be more selective and not pick up so much intermode garbage. If I want a scanner like most hams want ht's and mobiles to be I would rather buy a scanner. That's the price though we pay for convience. Very nice rig though, I think you would be pleased with it. I tried the Yaesu FT51 in a high intermode area and man it picked up alot of trash. It has alot of nice features but you see alot of them for sale which is not a good indication. You don't see many W32A's for sale. I tried them both the FT51 and the W32A and the Yaesu simply picks up more crap and I am an owner of Yaesu HF equipment so I am not a Yaesu hater. I hope this helps. E-mail me if you have any other questions. I really like mine. "Eric K. Davis" <ekd@iastate.edu> wrote:

Source record: 175946

I recently purchased an Icom 706 and would like to dabble with 2 meter AM or SSB. Do hams actually communicate in these modes anymore? I never seem to hear anyone. Is this mode more affected by propogation than others? The main reason I ask is that I have never heard anyone on 2 meter AM or SSB. I never see this topic discussed so I suppose the answer will help new hams other than myself. I live near Macon GA and travel to Atlanta frequently with the rig installe in my truck. Thanks for any replies. Tim

Well, gee, I'll have to tell KE3WD (Extra) that he is an urban "myth".
You see, I tried CW for the first time on 40m (Novice sub-band) and low
and behold, he was calling CQ at about 6-7 wpm. I had a nice CW QSO
with him, even if he did have to send most things twice!

So, David, there are some people in the Novice sub-bands who QRS
gladly!

Oh, and if you ever hear KC5VEI on, please answer me!

Is it known that the carpenter is using it on the HAM Bands?
Could have he done the MARS/CAP (xtended TX) mod and be using
frs or one of those business freqs like 154.6? If he is not using
the ham bands he is out of the hams' jurisdiction. If he is on band
and using the local repeaters, then the repeater owners have issue.
And the club (if one exists) should persue it.
Next time he's over, have your Optronics 3000A, Scout, Explorer
going when he TXs.

There's nothing you can do until the FCC is willing to assume their
responsibilities and enforce the law. They haven't done that in a good
while now and probably won't ever again.

before subscribing.

To submit materials:
TO: bitbucket@primenet.com

bit bucket /n./

1. The universal data sink (originally, the mythical receptacle
used to catch bits when they fall off the end of a register
during a shift instruction). Discarded, lost, or destroyed data
is said to have `gone to the bit bucket'. On Unix, often used
for /dev/null. Sometimes amplified as `the Great Bit Bucket in
the Sky'.

2. The place where all lost mail and news messages eventually go.
The selection is performed according to Finagle's Law;

important mail is much more likely to end up in the bit bucket
than junk mail, which has an almost 100% probability of getting
delivered. Routing to the bit bucket is automatically performed
by mail-transfer agents, news systems, and the lower layers of
the network.

3. The ideal location for all unwanted mail responses: "Flames
about this article to the bit bucket." Such a request is
guaranteed to overflow one's mailbox with flames.

4. Excuse for all mail that has not been sent. "I mailed you those
figures last week; they must have landed in the bit bucket." Compare
black hole.

This term is used purely in jest. It is based on the fanciful
notion that bits are objects that are not destroyed but only
misplaced. This appears to have been a mutation of an earlier
term `bit box', about which the same legend was current; old-
time hackers also report that trainees used to be told that
when the CPU stored bits into memory it was actually pulling
them `out of the bit box'. See also chad box.

Another variant of this legend has it that, as a consequence of
the `parity preservation law', the number of 1 bits that go to
the bit bucket must equal the number of 0 bits. Any imbalance
results in bits filling up the bit bucket. A qualified computer
technician can empty a full bit bucket as part of scheduled
maintenance.

>the one's I stated earlier? Thank you.

The CTCSS decoder acts as your receiver's squelch when engaged. It isn't
something which reads out a tone frequency (though there are units which
can do that too). You set the tone to be decoded to match the one the repeater
your are monitoring transmits.

Most tone accessed repeaters, and even some which don't require tone
access, also transmit tone. So if you have a CTCSS decoder in the radio,
your receiver's squelch will only open when the repeater is transmitting
and the selected tone is decoded by your receiver. It *won't* open for pager
crud and other IMD and overload on or near the channel frequency. This
makes monitoring the repeater much more pleasant in those "intermod alleys"
most of us have to drive through every day.

Note, most repeaters won't pass through tone from user radios. The tone that
they transmit is generated by an encoder installed at the repeater. This is
usually, but not always, set to the same frequency as the tone needed to
access the repeater.

Having tone on the repeater output is a very good idea, and is beneficial whether
the repeater requires tone access or not because it helps out those monitoring
the repeater in those intermod alleys. Locally, we encourage all repeater owners
to install a 100 Hz output tone on their machines for this purpose.

isn't it similar to FT-200 FT-250 etc ?
I had an early FT-250 in 69. The fault John mentions occurred on 80m -
believe a 330uuF capacitor changed value in 80m driver or pre-driver
circuit, it was also a crystal problem on ssb (80m cw), believe one
ceramic value capacitor changed value in the carrier oscillator. I
cannot remember particular problems for 40m, but it is 27 years since I
had this rig... The AGC circuit looks like a copy of the Drake TR4.
DF7JE modified it similar to this, but I felt that it was not much
success in changing time constants in this order...

Subject: Ten-Tec 1208 6mtr w/IC-735?

I am in the midst of building a 1208 transverter, and have tested out
the receive portion recently -- it worked great with my Halli S-53!
(approx -127 dBm AM input at 50 MHz was easily audible).

After I finish building the transmit portion and checking it out, I'm going to "move" the 1208 transciver IF from 20m to 10m, as I don't have a 20m all mode rig.

If anyone else has done this with the 1208 kit, I'd LOVE to hear from them. So far it looks to be pretty straightforward, but one never knows...

From: gareth@capecod.net (Gareth Crispell)
Subject: When to Power Down?

There is much debate over how often one should turn their computer off. Some say once a day, some say almost never and so on. Does anyone know how this applies to modern solid state rigs. Is it ok to leave them on for days at a time or even weeks? Is it better to power down everytime you leave the shack. What is the story here??

From: Matt Staroscik
Subject: WTB: MFJ code trainer

I am looking to pick up a used MFJ Morse trainer. I believe the model number is 418 - it's black plastic, with a 2-line LCD display on the side opposite the speaker. If you have one for sale drop me a line.

Regards...

I had a simular experience.

A guy in New York, I won't mention his name because I don't mean to cause him any harm, and I struck a deal for some equipment.. The last I heard from him is that it was a done deal and he would ship by UPS blue label. Well, I had a check ready but no UPS man/woman ever showed up. So I emailed numerous times and now response from that individual who has an address at ibm.com....

I mailed a final email that asked for a courtesy response stating if he was going to send it or not. That way I could look elsewhere for the same product. I got absolutely no response.

Perhaps he lost my address, email address, and the phone number that I gave him. Hmmmm, sounds unlikely but I will give him the benefit of the doubt. My guess is that he got a better offer, which is FINE, but he could at least had the courtesy to let me know. There would have been no hard feelings.

Oh well. I guess not everyone has the same ethic and respect for fellow human beings that I do.

Just my 2 cents.

Source record: 175956

I've been doing much research on the AT-600 radio. From what I've read, it can be rather easily modified to trasmit from 100-199 Mhz and 400-499 Mhz. This seems almost too good to be true, and it probably is. My question to anyone out there who might know is what the performance of the radio is while transmitting out of the ham bands. I know that using a ham antenna will decrease performance while transmitting on non-ham frequencies. But I'm mainly curious as to the performance of the modified AT-600, and also how it compares to other modified dual-band handhelds, such as the FT-50 and FT-51, the IC-T7A and IC-W32A, and the C558A. And, if anyone might have any additional info, I'm also trying to find out more about the Icom IC-Delta100 and IC-Delta1A, and the C568A, tri-band radios. I'm inquiring as to if they are modifiable, and if so, how much. Your information will be much appreciated.

from the Raleigh Amateur Radio Society newsletter, the Exciter:

Icom IC-W32A Mini-Review

The never-ending search for the perfect (Icom) handheld has led me to the Icom IC-W32A, a tiny dual-bander. It's getting close. (You Kenwood/Yaesu/Alinco/Standard guys - write your own review.)

As dual-band HTs got smaller, the shrinking real-estate on top of the radio created a problem. It takes three knobs to control the usual volume/squelch combo for VHF, volume/squelch for UHF, and channel/tuning. Add jacks for antenna, power and a speaker/mic, and things get tight on the top of smaller rigs.

Icom's first dualbander-on-a-diet was the W2A back in 1991 (the 24AT doesn't count - it can't tune both bands at once, so it doesn't need dual controls). They jammed all the controls on top of the radio, but they put the VHF volume/squelch shaft so close to the antenna connector that it was hard to turn. The next generation W21A still had three knobs, but somewhat better ergonomics. But the competition was getting smaller still. There just wouldn't be room.

So Icom and the other manufacturers pulled one of the three knobs off the top of the radio, and everybody went off in different directions as they tried to figure out how to double up on the functions of the remaining two knobs. The result is that you probably can't just pick up a friend's HT and use it anymore, unless it happens to be on the right channel and have the right volume setting already.

Icom went through some particularly tortured control combinations in the short-lived Z1A and W31A before arriving at a workable combination in the W32A. Those older radios put the squelch controls for each band on the outside rings of each shaft, and divide the inside ring between volume duty and channel duty. The Z1 forces you to find and push a "function" key before you can adjust the volume (a real stupid idea). The W31 lets you program those shafts to be either volume or channel, and then you have to hold the function button use the opposite function (not as stupid, but inconvient).

I have a Z1, and kept wishing that they hadn't wasted that outside ring on the squelch control. Sure, squelch is a diddler's delight as a control, but you really don't have to adjust it much. Volume control is much more important.

Well, someone at Icom must have been listening inside my brain, because that's just what they did. The ring on each outer shaft of the W32 controls volume - easy to reach and adjust. The center knob controls frequency (and other functions through the SET menu).

To change the squelch level, you have to hold a function key and rotate the center knob. But, among the 8 levels of squelch settings, there's something called "AT," or as the manual describes it, an "automatic level adjustment with a noise pulse count system." I don't know what that is, but it seems to work pretty well. I'm now happy with the compromise on limited real-estate.

Something else I'm happy about is memories - 100 per band. 100 memories on 2 meters is just barely enough for what I want to do, which is program every 2 meter repeater and simplex channel into a memory (there are 100 of the beasts).

Why do that? Because it's the only way to easily scan all the 2 meter FM channels. The band plan is too convoluted for easy scanning using "band limits." Repeaters down by 145.11 - 145.49 are in 20 kHz steps. Then there's a big gap in the band, until you reach the repeaters and simplex from 146.4 to 147.6, and those are on 15 kHz channels. So you're choices are to scan just one part of the band efficiently, or scan too much of it at 5 kHz steps, very inefficiently. Unless you can program every channel into memory.

There's just one thing I'd like to see in addition that the W32 doesn't do - "bank" the memories, or group them and let me turn banks on and off. The local repeaters would be in one bank, and the rest of them would be in another. I could then choose to scan just the local machines, or all of them. You might have your own favorite plan for banked memories.

(Why do I want to do all that scanning anyway? How do you think I got the reputation for being everywhere at once?)

And now, some of the other interesting touches in this radio:

Alpha names - you can program the display to read an 8-character text name for memory channels. Great for those lesser-used memory channels when you can't remember why you programmed it. But I dread the day when we stop calling it "six-four" and start calling it "channel nine."

Weather Channels - there's a separate "band" for tuning the NOAA weather channels from 162.40 - 162.55. They read out only in channel numbers from 1 thru 10, not in frequencies. And the order is strange: Ch. 1 is 162.55, Ch. 2 is 162.40, Ch. 3 is 162.475, Ch. 4 is 162.425, and it goes up from there. That follows the order of "popularity" of the NOAA channels, but will seem odd to hams used to dealing with real frequencies.

Frequency coverage is wide, but not quite as wide as earlier models (you'll need to "keyboard mod" the radio for 800 MHz receive - turn off, and hold down the SQUELCH and BAND buttons while turning on):

108-136, with a real AM detector.

136-200 (I haven't tested the sensitivity in the upper reaches of that band,, but it doesn't hear the potent ch. 11 video carrier on 199.25, so I suspect it's kind of deaf up there).

300-400 (again, no sensitivity measurements, and there's an FM detector, although much of the military aviation activity in this band is AM).

400-600. Here, the TV carrier test shows sensitivity up to the low 500's, but it can't hear channel 30 (in Middelsex) at 567.24 - that carrier bangs into my AOR 3000A scanner.

600 - 1000. No hint of the channel 40 carrier at 627.26, but it hears the 800 MHz public service stuff well. The cellular band is blocked (big deal, it's all going digital anyway). It hears a 940 MHz system well.

It's a small radio, but has big buttons. The speaker is on the small side, with only fair fidelity and volume. Transmit audio is kind of bassy and a little muddy.

Transmitting on VHF will finally mute the UHF receiver, and vice versa. It took Icom forever to figure this out. With the W2A and W21A, if you were transmitting on VHF and somebody came up on UHF, you blasted that sound out your transmitter.

You can set different CTCSS tones for transmit and receive. The only radio I've encounterd before that did this was the Radio Shack HTX-202. I don't think I've ever really wished I could do that, but now I can.

Automatic Repeater Offsets - Kenwood has done this for years. Icom just learned how to track the radio with the band plan, and shift the transmitter offset up or down depending on what part of the band you're in. But the band plan they used must have been the ARRL's, which still calls for "linear translators" between 145.11 and 145.19. So the W32A won't set an automatic offset there. Icom, get a clue. There are no linear translators except on the OSCARS, so this part of the band is full of repeaters.

But they make up for that faux pas with this feature - when it's time to program a memory, you dial it into the VFO, then push some buttons to start putting it into memory. But part way into that process, as you are selecting which memory channel you want to use by dialing across the existing memory channels, the display SHOWS YOU WHAT'S ALREADY BEEN PROGRAMMED in each channel. Now that is extra useful.

There's a direct readout of battery voltage - at least I thought there was. Turns out it only reads in .5 volt increments, and not when the radio is transmitting. So it's utility is limited. The manual says it was designed to keep tabs on the voltage of an alkaline pack, not the nicads.

Cloning and PC programming - you can. I haven't tried it yet. You need an optional cable.

There is no adapter to charge the battery with the little wall cube charger when the battery is off the radio. Your option is to charge it while on the radio, or get a rapid-charger. The rapid charger is nice, and it runs on 12 volts, so you can use it in your car. Beware, there's a little, loose plastic insert required to hold in different size batteries. It falls out easily. I know. I lost mine. The replacement is $15.

DTMF "Paging" functions are GONE. Nobody except N1GMV every used them, but they were a great idea. Your radio could be programmed with a bunch of touch-tone codes, and would sit silently monitoring a busy channel until someone send one of your codes. I couldn't believe this radio didn't have the feature, but it's not on the buttons, and not in the manual. It does have CTCSS encode and decode, with 50 tone channels instead of the usual 38.

Also missing is the ability to keep the internal speaker going when you plug in a speaker-mic.

And finally, Icom stole Kenwood's "guide." It's a little scroll of text across the screen that tells you what the function of a button or "set" function is. I felt like a dork using it, but it worked.

There's more, of course, but most of the other functions are the ones we've been using for several years.

So yes, I like the W32. It solved some vexing operational problems, and only added a few small new ones. My W2A cost over $600 in 1991. The W32 street price is about $400.

3107. Re: FT-51 cross band repeat?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-09 00:00:00 UTC
From: mikekb2ufs@aol.com
Message-ID: <19970509105101.GAA13273@ladder01.news.aol.com>
Source record: 175958

Chuck,

The manual neglects to tell you to put the '51R in the "DUP" (duplex) mode first! Try this (<FM><9>) and crossband-repeat will work.

There are >several< things that are not mentioned in the manual. If you're scanning and come across an interesting frequency, how do you hang onto it, short of writing it down? Press <FM> and <VFO>, this will transfer the frequency to the last VFO used. This also works if you're using a memory channel as a "VFO" (MT).

Feel free to ask me if you have any other questions--I may have stumbled across an answer!

So Danie, I dont have the solution now !
Don't worry about it, it is just an adjustment to do,
but what to do ?
Can somebody tell us please ?

The few crystals I have here are 8 mhz range. Gonset apparently used a 6X multiplier, at least for the 6M rigs. At 50.4 this would mean 8400 Khz crystals would do. These are FT-243 packages.

I have quite a few responses regarding these crystals. Apparently there is a good supply available. Anyone needing any can contact me and I'll provide the reference I have as to where to buy them.

Thanks to all who have responded.

I have followed the Japanese radio prices as the Yen got strong and
week. I found that the Ham Radio prices went up when the Yen was strong
but the prices didn't go down when the Yen was weak. I guess it is a one
way street!!!

I cannot attend the Hamvention this year so I have one room available for 3 nights, arriving Thur., May 15,
and leaving Sun., May 18. The room is non-smoking and has 2 double beds. The motel is renting the
rooms for the 3 nights (must take 3 nights I think). The rate is $80.00 per night charged by the motel. I am
not getting anything out of this but would like to make the room available to someone who might need it..
The motel is a 15 min. drive from Hara Arena. I must cancel by Mon., May 12, so let me know ASAP if you
are interested.

Email me at: sparkes@fast.net

Hi, Its spring and thus time to clean out the shack/computer
room of the stuff that doesn't get used enough (or at all)...

I have the following forsale/trade:

1) Icom R71a receiver with remote and manual - $450 obo
2) 2 unopened Kingston 32M parity simms (not EDO) - $350 obo (for both)
3) Archive 2G SCSI dat drive in external case - $250
4) Fujitsu 512M FastSCSI hard drive (internal) - $100
5) External SCSI 3.5" case (must be sold with #4 or #5) - $50
6) Apple Powerbook Duo 210 (upgraded to POWER PC)
800M drive, 16M ram, 19.2K modem, scsidock
16 grey screen, 3 batteries, 2 power adapters - $750
(older type "B" keyboard)

I'm looking in the following in trade:
1) Solid State HF rig (Icom 735 or similar) accessories a plus
2) 2M/70cm amplifier
3) 2m/70cm base antenna
4) AOR 8000 or similar scanner
5) 2M/70cm mobile radio

Thanks,
Josh Goldsmith

I would like to know a little about the history of the National HRO receiver?

What are the different models (like -M or -5)?

What is the value of the different models?

3121. DX-70TH First Impressions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-10 00:00:00 UTC
From: res@cmprime.att.com
Message-ID: <5l0t6l$ab3@mtinsc03.worldnet.att.net>
Source record: 175859

Just got a new DX70 delivered from HRO in Delaware to my home in NNJ, 20 hours from phone call to delivery.

First thing I did was sit it down beside a 706 belonging to George, KC2MF and compare some receiver performance using a signal generator. The sensitivity of both rigs are the same. At high signal levels the Alinco has some tweets and whistles as you bring the strong signal in towards the tuned in signal. The 706 has none. I should mention that this is with a strong (-30 dBm) signal and the tweets were near the noise level so from a practical standpoint it is no big deal. Phase noise appeard to be similar but again, slightly lower on the 706. I do an IM test by injecting 2 signals of -10 dBm through an attenuator into the receiver and measuring the amount of attenuation I need to insert to get 3rd order IM level of -90 dBm (about S5 or so). The Alinco is better than the Icom here .....
The AM filter is a bit broad, seems to be around 10 KHz, and there is a narrow AM filter included which does the job but is a little restricted, as you would expect. For listening to AM broadcast you will probably leave it broad. On FM the book says it selects a narrow filter for 10 M FM and a wide filter for 6 m. I heard a local 10 m FM repeater and it sounded normal to me. As far as I know, though, 10 m repeaters in the US use +/- 5 KHz deviation just like 6 m and 2 m repeaters do so I do not know what Alinco has in mind here or if they really do what they say.

Overall the DX70 sounds great on receive. The internal speaker is about what you'd expect in a miniture rig and on an external speaker it sounds as good as any big rig. The ssb filter is great, the built in cw filter is adequate for everyday cw operation. I ran it on 40 cw and checked out the cw full break-in which I was not impressed with as it keys a relay that is too noisy for me. On semi-break, of course, it isn't as noticable because it doesn't open and close as often. There are 7 values of tx delay that are settable from a menu and one that is "automatic". It changes values based on your keying speed - the faster you send the shorter the tx delay. If the rig detects a hot heat sink a rather noisy but effective fan comes on for a few seconds and then goes off.
I looked for 2nd harmonics on a spectrum analyzer and there are NONE, I mean NOTHING was visible at all, and I can see over 60 db down. So don't expect too much TVI while mobiling down the interstate !

The vfo dial is smooth as silk, not detented. It is a little smaller than the 706. The multi-funtion dial on the left side is used to QSY quickly up the band in fixed increments which are settable from a menu. i.e. you set it for 5 kHz and it jumps up the band in 5 KHz steps. There are other ways to qsy quickly, as well. By hitting a small button the multi-function dial can tune in 1MHz steps or advance one band at a time.

Size is nearly the same as a 706 or a Radio Shack 10 meter rig..
The display is great, very readable and the brightness can be set to 4 levels.
A mobile mount comes with it, but no remote kit. That is an accessory.

All in all a great little rig - amazing what engineers can produce if you keep the refrig stocked with enough Mountain Dew.

If you attempt to do the cap/mars modification on the Ft-50 using a
soldering iron. Will it damage the radio at all. For example put small
charge through the radio and perhaps fry some of the components inside.
If so how would do it without messing up the radio.
Thanks for all your help

Subject: Ham Equipment Sale

Following is a lists of Ham gear I'm parting with, do to an impending move. The prices are all negotiable, and I'm mainly interested in selling everthing on this list. Manuals and documentation furnished where available.

1. CDR Rotor Control Box. Series, 4516, for use with HAM-M rotators. $20.00, plus $5.00 shipping.

2. Complete RTTY, CW and ASCII digital station. INFO-TECH M-300C Keyboard that transmits RTTY, CW and ASCII at all normal speeds and shifts. INFO-TECH M-200F, RTTY/CW/ASCII Demodulator, that copies and outputs to video all standard speeds and shifts. Has printer support, etc. "Taxan" Amber phosphor Video Monitor. Complete system $200.00, plus $25.00 shipping.

3. "Digi-Designer" Work Station. Complete digital IC test and construction aid, with internal clock, (1 to 100K speeds), four logic switches, two pulsers, IC test and assembly block, and built in 110 VAC power supply, (TTL level voltages out). $25.00, plus $5.00 shipping.

4. Homebrew WB4VVF Iambic "Memory Keyer". $20.00, plus $5.00 shipping.

5. Homebrew WB4VVF Iambic Keyer, with built in clock, and 10 minute ID timer. $20.00, plus $5.00 shipping.

6. 5-Volt, 1 amp, "Calectro" Regulated TTL Power supply. $10.00, plus $3.00 shipping.

7. Six element 450 MHz Beam Anternna. $20.00, plus $5.00 shipping.

8. "Hustler" MO-2 Folding Mobile Antenna Mast. $10.00, $3.00 shipping.

9. New Kenwood PG-2 DC Power Cable. Fits TM201, 211, 401, 411, 2530/50/70, TR8400/9500, TR751, 7S670, R600/1000/2000. $5.00, plus $3.00 shipping.

10. Kenwood Mc-35S 50K Noise Cancelling Microphone. $10.00, plus $4.00 shipping.

11. Drake 7073DM Hand Held Microphone. $10.00, plus $4.00 shipping.

12. New Radio Shack Dynamic Hand Held Microphone, with 5-pin DIN type connector. $5.00, plus $3.00 freight.

13. Kenwood Dynamic Microphone, 500 ohm, 4-pin connector. $10.00, $4.00 shipping.

14. "CALRAD" D-350 Dynamic Desk Microphone, 50K impedance. $10.00, plus $4.00 shipping.

15. New Yaesu YM-23 Condenser Hand Microphone, with 4-pin connector. $10.00, plus $4.00 shipping.

16. "Swan" SWR-1A Power and SWR Meter. $15.00, plus $4.00 shipping.

17. "Siltronix" SWR-2, Power and SWR Meter. $15.00 plus $4.00 shipping.

18. Forty foot Rohn 25 Ham Tower, with HyGain TH-3 "Thunderbird" 1KW beam antenna. CDR "Tail Twister" Heavy Duty Rotor, and Control Station. Three element two-meter beam, and Ringo Ranger Two-meter vertical antenna. Pick up only in Rapid City, SD. Bargain priced at $700.00, firm.

19. HAL Communications PCI-3000, PC AMTOR Computer Board. Excellent digital communictions including RTTY, CW, ASCII and AMTOR. Fully functional, latest firmware, and full documentation. Bargain priced at $175.00, plus $7.50 shipping.

20. ICOM IC4AT 450 MHz Handi-Talki, with Speaker Microphone, two batteries, battery charger and extendable "DX" antenna. Package contains huge ICOM optional 2nd battery (13.8 volts), that could almost be used to jump start your car! Complete system for $100.00, plus $10.00 shipping.

21. Bencher ZA-1A balun. $5.00, plus $3.00 shipping.

22. Heathkit IT-741D Logic Probe. $15.00, plush $4.00 shipping.

23. Heathkit "Cantenna", 1KW Dummy Load. $15.00, plus $7.50 shipping.

24. Epson MX80/FT Tractor Feed Dot Matrix Printer, with roll paper adapter. $50.00, plus $10.00 shipping.

25. New "Pro-AM" two-Meter vertical antenna, (surface mount). $15.00, plus $5.00 shipping.

26. Sencore Digital Volt Meter. $10.00, plush $5.00 shipping.

27. "QST" Magazines. January 1974 through March 1997, complete, 288 issues. $50.00, plus $20.00 shipping.

28. "Ham Radio" Magazines. Bound editions for years 1976 and 1977./ $10.00, plus $7.50 shipping.

29. CW-1300 Oscilloscope. Military Surplus and makes good RTTY, AMTOR, Clover, etc., monitor. $10.00, plus $10.00 shipping.

The two triangles represent 640khz and 1240khz respectively and were, as
previously stated, for Civil Defense announcements. All other radio
operation would be ceased in the event of a nuclear emergency. The
markings began in 1954 and lasted through 1963 radios, although some
imported units lasted a little longer.

Subject: US NAVY AN/URR-27A RADIO FOR $8. ?

It is true. A NAVY RADIO AN/URR-27A is up for sale at Auction World.

And the high bid is just $8.

Somebody is really going to "steal" this one - it might as well be you !

See it for yourself at:

from the Raleigh Amateur Radio Society newsletter, the Exciter:

Icom IC-W32A Mini-Review

The never-ending search for the perfect (Icom) handheld has led me to the Icom IC-W32A, a tiny dual-bander. It's getting close. (You

Kenwood/Yaesu/Alinco/Standard guys - write your own review.)

As dual-band HTs got smaller, the shrinking real-estate on top of the radio created a problem. It takes three knobs to control the usual volume/squelch combo for VHF, volume/squelch for UHF, and channel/tuning. Add jacks for antenna, power and a speaker/mic, and things get tight on the top of smaller rigs.

Icom's first dualbander-on-a-diet was the W2A back in 1991 (the 24AT doesn't count - it can't tune both bands at once, so it doesn't need dual controls). They jammed all the controls on top of the radio, but they put the VHF volume/squelch shaft so close to the antenna connector that it was hard to turn. The next generation W21A still had three knobs, but somewhat better ergonomics. But the competition was getting smaller still. There just wouldn't be room.

So Icom and the other manufacturers pulled one of the three knobs off the top of the radio, and everybody went off in different directions as they tried to figure out how to double up on the functions of the remaining two knobs. The result is that you probably can't just pick up a friend's HT and use it anymore, unless it happens to be on the right channel and have the right volume setting already.

Icom went through some particularly tortured control combinations in the short-lived Z1A and W31A before arriving at a workable combination in the W32A. Those older radios put the squelch controls for each band on the outside rings of each shaft, and divide the inside ring between volume duty and channel duty. The Z1 forces you to find and push a "function" key before you can adjust the volume (a real stupid idea). The W31 lets you program those shafts to be either volume or channel, and then you have to hold the function button use the opposite function (not as stupid, but inconvient).

I have a Z1, and kept wishing that they hadn't wasted that outside ring on the squelch control. Sure, squelch is a diddler's delight as a control, but you really don't have to adjust it much. Volume control is much more important.

Well, someone at Icom must have been listening inside my brain, because that's just what they did. The ring on each outer shaft of the W32 controls volume - easy to reach and adjust. The center knob controls frequency (and other functions through the SET menu).

To change the squelch level, you have to hold a function key and rotate the center knob. But, among the 8 levels of squelch settings, there's something called "AT," or as the manual describes it, an "automatic level adjustment with a noise pulse count system." I don't know what that is, but it seems to work pretty well. I'm now happy with the compromise on limited real-estate.

Something else I'm happy about is memories - 100 per band. 100 memories on 2 meters is just barely enough for what I want to do, which is program every 2 meter repeater and simplex channel into a memory (there are 100 of

the beasts).

Why do that? Because it's the only way to easily scan all the 2 meter FM channels. The band plan is too convoluted for easy scanning using "band limits." Repeaters down by 145.11 - 145.49 are in 20 kHz steps. Then there's a big gap in the band, until you reach the repeaters and simplex from 146.4 to 147.6, and those are on 15 kHz channels. So you're choices are to scan just one part of the band efficiently, or scan too much of it at 5 kHz steps, very inefficiently. Unless you can program every channel into memory.

There's just one thing I'd like to see in addition that the W32 doesn't do - "bank" the memories, or group them and let me turn banks on and off. The local repeaters would be in one bank, and the rest of them would be in another. I could then choose to scan just the local machines, or all of them. You might have your own favorite plan for banked memories.

(Why do I want to do all that scanning anyway? How do you think I got the reputation for being everywhere at once?)

And now, some of the other interesting touches in this radio:

Alpha names - you can program the display to read an 8-character text name for memory channels. Great for those lesser-used memory channels when you can't remember why you programmed it. But I dread the day when we stop calling it "six-four" and start calling it "channel nine."

Weather Channels - there's a separate "band" for tuning the NOAA weather channels from 162.40 - 162.55. They read out only in channel numbers from 1 thru 10, not in frequencies. And the order is strange: Ch. 1 is 162.55, Ch. 2 is 162.40, Ch. 3 is 162.475, Ch. 4 is 162.425, and it goes up from there. That follows the order of "popularity" of the NOAA channels, but will seem odd to hams used to dealing with real frequencies.

Frequency coverage is wide, but not quite as wide as earlier models (you'll need to "keyboard mod" the radio for 800 MHz receive - turn off, and hold down the SQUELCH and BAND buttons while turning on):

108-136, with a real AM detector.

136-200 (I haven't tested the sensitivity in the upper reaches of that band,, but it doesn't hear the potent ch. 11 video carrier on 199.25, so I suspect it's kind of deaf up there).

300-400 (again, no sensitivity measurements, and there's an FM detector, although much of the military aviation activity in this band is AM).

400-600. Here, the TV carrier test shows sensitivity up to the low 500's, but it can't hear channel 30 (in Middelsex) at 567.24 - that carrier bangs into my AOR 3000A scanner.

600 - 1000. No hint of the channel 40 carrier at 627.26, but it hears the 800 MHz public service stuff well. The cellular band is blocked (big deal, it's all going digital anyway). It hears a 940 MHz system well.

It's a small radio, but has big buttons. The speaker is on the small side, with only fair fidelity and volume. Transmit audio is kind of bassy and a little muddy.

Transmitting on VHF will finally mute the UHF receiver, and vice versa. It took Icom forever to figure this out. With the W2A and W21A, if you were transmitting on VHF and somebody came up on UHF, you blasted that sound out your transmitter.

You can set different CTCSS tones for transmit and receive. The only radio I've encounterd before that did this was the Radio Shack HTX-202. I don't think I've ever really wished I could do that, but now I can.

Automatic Repeater Offsets - Kenwood has done this for years. Icom just learned how to track the radio with the band plan, and shift the transmitter offset up or down depending on what part of the band you're in. But the band plan they used must have been the ARRL's, which still calls for "linear translators" between 145.11 and 145.19. So the W32A won't set an automatic offset there. Icom, get a clue. There are no linear translators except on the OSCARS, so this part of the band is full of repeaters.

But they make up for that faux pas with this feature - when it's time to program a memory, you dial it into the VFO, then push some buttons to start putting it into memory. But part way into that process, as you are selecting which memory channel you want to use by dialing across the existing memory channels, the display SHOWS YOU WHAT'S ALREADY BEEN PROGRAMMED in each channel. Now that is extra useful.

There's a direct readout of battery voltage - at least I thought there was. Turns out it only reads in .5 volt increments, and not when the radio is transmitting. So it's utility is limited. The manual says it was designed to keep tabs on the voltage of an alkaline pack, not the nicads.

Cloning and PC programming - you can. I haven't tried it yet. You need an optional cable.

There is no adapter to charge the battery with the little wall cube charger when the battery is off the radio. Your option is to charge it while on the radio, or get a rapid-charger. The rapid charger is nice, and it runs on 12 volts, so you can use it in your car. Beware, there's a little, loose plastic insert required to hold in different size batteries. It falls out easily. I know. I lost mine. The replacement is $15.

DTMF "Paging" functions are GONE. Nobody except N1GMV every used them, but they were a great idea. Your radio could be programmed with a bunch of touch-tone codes, and would sit silently monitoring a busy channel until someone send one of your codes. I couldn't believe this radio didn't have the feature, but it's not on the buttons, and not in the manual. It does have CTCSS encode and decode, with 50 tone channels instead of the usual 38.

Also missing is the ability to keep the internal speaker going when you plug in a speaker-mic.

And finally, Icom stole Kenwood's "guide." It's a little scroll of text across the screen that tells you what the function of a button or "set" function is. I felt like a dork using it, but it worked.

There's more, of course, but most of the other functions are the ones we've been using for several years.

So yes, I like the W32. It solved some vexing operational problems, and only added a few small new ones. My W2A cost over $600 in 1991. The W32 street price is about $400.

David:

I have modified my FT-990 for use with my microwave modules transverters
for 6 and 2 meters....works great! Runs circles around most of the
expensive VHF multimode boxes!

Basically, when I put +12 volts on a wire (from external transverter
VHF/HF switch) the following happens: 1. Add on DIP relay breaks the
signal from the driver board (normally goes to amp) and re-routes to a
phono jack on the rear (transverter drive input). 2. Using steering
diodes (2), I force the exernal RX antenna relay into the rx antenna
position (used for receive converter input).

That's it! I have scanned in pictures and schematic drawings if you're
interested. Can you handle VISIO files (source) or I can convert and
e-mail as BMP or GIF attachments.

73s,
Woody AK2F

I have a Henry 2K-3 amplifier for sale. I am the second owner and it is truly in excellent condition. It is a console type amp, 80-10 meters, runs 2 Eimac 3-500Z tubes. It puts out the legal limit with 100-110 W input and truly looks and works great. I have the original manual for it.

I am asking $925, pick-up only....I will be taking it to Dayton, so could deliver there (see it at Space 1941-1942). If interested, drop me an email.

Well if you made your stocking purchases on the strong Yen, likely
you could not stand the loss of dropping your selling price when the
actual value of the product was less under a weak Yen to dollar ratio.
I suspect that is what is happening.
I am sure most Amateur companies do not particapte in price protection
programs.

Hey, I would wait a while before thinking about the Yaesu. We
already know about some of the shortcomings of the Icom, but
the Yaesu will need time to shake out the bugs. Plus, if you
buy the Yaesu right away, you will pay a premium price, the
price will always come down a short while after the original
sales hype dies down.

WALTER! I have had 3ea. T-368's and 1 spare parts radio. I paid $600. for the 1st one about 7 years ago and another 5 years ago for $900., and a new one in the wooden crate about the same time $1200. I traded one, (a used one this year) for a broadcast staion radio that is worth at least $2000. For the ones that I have seen, they go all over the place. I have my (parts only) radio for sale at $400. Hope this helps some, Regards, ARTHUR KC6KUK . . .

3146. Jeep Cherokee engine noise

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-10 00:00:00 UTC
From: cwowen@aol.com
Message-ID: <19970510203600.QAA28455@ladder02.news.aol.com>
Source record: 175884

I have an 1989 Jeep Cherokee 4.0 and an Alinco DX-70TH with two mag mount antennas. One is for the HF side and the other for 6M.
I am getting alot of engine and computer noise into the unit through the antennas.
It is not coming in through the power, no AC whine.
On 6M I am getting about an S6 of noise on SSB and about the same on 10M.
As I work down in frequency the interference decreases, and almost completely goes away at about 75M.
I have changed the wires and plugs, have rerouted the power, have tried grounding every thing.

Anyone out have this problem or possibly have a cure? And, yes I do realize that getting rid of the old Jeep and getting something newer would probably solve the problem, however, that is not an option at this time.
So, please....

Thank you,

Cliff Owen

Regrounding *everything* is always important on the Cherokee. It is painted before assembly and many parts will not have good electrical connection. On mine, the horn wouldn't even blow until I sanded paint from mating surfaces.

That said, the best way to cure electrical interference is always to treat it at the *source*. That means you need to locate the exact sources of the noise you are experiencing and then treat them there. If the engine control computer is a source of noise, suppress it *at the computer*. If the noise is due to the fuel injectors, suppress it *at the injectors*. Etc. Use a small "sniffer" loop on the end of a piece of coax to identify the noise sources and use standard suppression techniques to deal with them right at the source. You can chase your tail for months trying generic solutions. Be systematic and solve the noise problems directly at their source and you'll have a quieter vehicle, and in less time.

From: GZGQ49A@prodigy.com
Message-ID: <5l2k9p$26h2@newssvr01-int.news.prodigy.com>
Source record: 175892

Just bought a new handie talkie from Cherokee, the same people
that make 11 meter CB radios and also FOX radar detectors. Small unit
about 5.5 inches high with out the antenna, just over a pound in weight,
fits the hand very nicely and it is similiar to a Standard HT in style.
The rig covers 50 through 54 mHz in FM mode, has five memories and scans
the memories or band scan.
Power out is one or five watts and it comes with a 12 volt
battery pack. My radio shack speaker/mic fits the rig but the connector
is a bit thick and is close to the BNC antenna. My Maxon spk/mic fits
much better. Rumor has it since Cherokee has introduced an 11 meter all
mode HT they will follow with a 10 meter version and I hope it will have
repeater offsets and FM.
List price for the AH-50 is 349 but my 200 was just as good! Here
is the WEB page for their products with a better discription and jpegs:

Today, I bought a used oscilloscope at a flea market. It is a BK
Precision Model 1479, 30MHz scope.

I need a manual for this scope. Does anyone have a manual which they
would be willing to copy for me? Of course, I would reimburse expenses.

Thanks for reading this. Drop me a note if you can help.

Koert (KC6WCI)

The only puzzling thing about your report is that the noise
gets quieter as you go lower in frequency. That is unusual,
in my experience. I have attached some general information.
I endorse Gary Coffman's view of suppression at the source
as a key. I am not sure how to build a sniffer, but
I suspect that I will need to learn someday. In your
case, a rubber duck antenna for 6M would probably work fine
as a sniffer.

HF MOBILE NOISE ELIMINATION

In my experience, there are three parts to the job of installing HF
mobile in a vehicle: Installing the radio, installing the antenna,
and suppressing noise. Of the three, suppressing noise is probably
the hardest.

The first question is what kind of noise you are experiencing. If it
sounds like a popping noise, and gets louder when you accelerate, it
is probably ignition noise. If it is a hash type noise, it is
probably an electric motor. The engine fans on my Tercel were very

bad, but only ran in traffic, so I just lived with it. I was told that .001uf caps, short leads, from the motor to ground would help, but never did it. Some electric fuel pumps can be very noisy.

One test to see if the noise is coming from the power cable or the antenna is to disconnect the antenna. If you still have noise, work on the power cable. If the noise goes away, the power is OK, focus on suppressing noise at the source. If you connect the radio power cable directly to the battery, you will probably not experience noise on the power cable. (Don't forget to fuse both plus and minus at the battery for safety). Heavy cable is advisable; I would not use anthing smaller than 12 ga, and some people use welding cable.

I assume here that you have broad-band noise across various bands. If you have a single frequency birdie, you probably have noise from the computer crystal.

You might check to be sure that you have resistor plugs and wires before starting more serious work. Also, be sure that your noise blanker is on, although most radios do not have super-effective noise blankers.

On a 1979 Honda Civic with points, I used resistor plugs and wires, which solved the problem, but meant that I had to change the points every 5000 miles or so, as the iginition system was designed for resistor wires only, and if the ignition system was not perfect, the car ran poorly.

On a 1985 Toyota Tercel, I had tremendous luck suppressing ignition noise by buying heavy copper tubular braid, and slipping it over the spark plug wires. I built a copper box that covered most of the distributor, bonded the braid to the box, and then bonded the box to the block, keeping the wires short. This was a day and night improvement, and I never felt the need to do any more ignition noise suppression.

On a 1996 Subaru Legacy, I again built a copper box, and bought more tubular braid. However, I only got an improvement of about 2 S-units. I needed more, especially on 40 meters, so I ran two ground wires from the exhaust pipe to the chassis. This was probably worth more than 2 S-units, and finished the job to my satisfaction.

If you are systematic, you should be able to identify the source of any problems and correct them.

A couple of other notes on HF mobile installations. Don Johnson, W6AAQ wrote the book, 40+5 YEARS OF HF MOBILEERING. Try to get a copy. I use the Hustler antenna system, and find it adequate except on 75 m. If you plan to operate 75m, consider a WB5TYD Texas Bug Catcher or a Screwdriver antenna. Unless you have an automatic or remote tuning system, the antenna bandwidth on 75m will probably be only about 50kc or so. I have never invested the time and effort required to achieve a satisfactory 75m installation.

Good luck

>UNIX guru to get working.

>Am I asking for too much?

Have you ever played with Unix or Linux ?

I'm rather new to HAM and packet radio and I have just bought my first set.
For 3 years I have run Linux now and it seems to me the ultimate OS for
packet radio (you have to discover this yourself, NO FLAMES).
I think Linux users/developers and radio amateurs both want to have the
POSSIBILITY to control and to know every little detail.

Unfortunaty using Linux is not common practice in packet radio land. Why ?
I don't know, maybee someone else can explain it to me.

But if you don't bother what's going on, run M$ products and call your
reseller if it's not working. However, I don't think you are a real radio
amateur in that case (perhaps my interpretation of radio amateur is wrong :)).

Most supermarkets in the U.S ask to see proof of age when someone buys cigarettes. And it DOES prevent some minors from smoking. So, isn't it possible that if stores required customers to show a Ham license before they could buy a Ham transmitter, that illegal transmissions on the Ham bands may slow down? You'll never stop the dedicated person who wants to break the law. But, there's a lot of people who may be not so dedicated, and they might be scared off by, say the Radio Shack employee who asks, "May I please see your Ham license?"

What about mail order? Require a photocopy of a Ham license.

3177. Re: FT-50RD OR AT-600

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: Thomas Gasta <tomgasta@worldnet.att.net>
Message-ID: <33763831.576A@worldnet.att.net>
Source record: 175671

I don't know anything about the "AT600" but do have an FT50. Although the FT50 seemed like a radio packed with abilities, I have found Yaesu service and the RF section (UHF) of the FT50 to be poor. I had an FT40 (UHF only version) and had the same problems. The majority, I now have discovered, of FT50s have a problem when transmitting at the higher power levels on UHF. There is an RF problem that causes the radio to emit static sounding noise on the transmitted signal. This problem does not normally happen at the lower power levels, nor does it happen when transmitting into a dummy load or external antenna. After buying my radio on February 17th of this year, I have just received it back from Yaesu last monday from it's second trip to them for repair of this annoying problem. And, just like my first FT40, it still has the problem.
The real problem is that Yaesu is VERY MUCH AWARE of this design problem, they even have a service bulletin to "reduce the problem", note, not remove the problem, but, REDUCE the proble.

This repair is nothing more than a piece of copper tape placed over the UHF Power module and a mini spring (thats right, a mechanical spring) wedged between the outer case and a shield cover. This repair may work on some, but not all FT50Rs. This combined with not having a radio more than 6 days over three months ownership leaves a bad taste in my mouth for Yaesu. My radio sat in a "black hole" for three weeks waiting for a Quality Control check by the service manager as it was a "second return".

The service manager was on vacation, later defined as sick leave (after 5th phone call), and when he returned and signed it off, it came back as bad or worse than when it left. Then when I call to complain to the service manager, seems he died! Seems nobody else can now make a decision. I suspect that with Radio in hand and a personnal visit to the Yaesu booth at Dayton, and a loud voice, I might get some satisfaction, if not a new replacement.

Now, before all the FT50 lovers get really pissed off, the radio if it worked, a very nice, greatly modifiable unit, and I truly looked forward to having one. The programming software for the unit makes it "easier" to program than by keypad, but is full of flaws and it's design can never be accused of copying someone like Motorola software. And, as I have now found, in 9 out of 11 FT50s in the area, the UHF noise problem was there but the owners had never noticed as they are normally talking on repeaters that are somewhat noisy anyway. The main selling point for me was the ability of the radio to do Digital Coded Squelch, and the noise problem sometimes causes a problem when using this system.

All I would suggest is that you immediately test the unit, before purchase if able, for this problem. If you can get one from the start without the problem, you would be very happy with it.

From: Randall Dvorak <dvorak@icsi.net>
Message-ID: <33764F8B.7B0D@icsi.net>
Source record: 175675

16 channel, 40 watts, recently checked out by radio tech. This is a nice
radio that works fine and looks fine! $225 including shipping (UPS COD)
I'm selling b/c I'm going to UHF radios.
Will trade for UHF mobile or hand held.
Email to dvorak@icsi.net

>
>73, Dick
>
I have three computers at home and use one at work. I turn the one at
work off every night. I turn the ones at home off whenever I'm done
using them, and won't be using them again for at least an hour. Some
times the ones at home get turned off and on several times in one day.
I have NEVER had any of the problems that doomsayers warn about when
encouraging people to leave their computers on all the time. All that
happens when you leave the computer on when it's not needed, is you waste
electricity. 73 de KD7MK

3183. HELP! What is an Icom model FX-609 ?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: sidener@saucer.cc.umr.edu
Message-ID: <5l5go9nhp4@news.cc.umr.edu>
Source record: 175677

Hi,I just took apart what I believe is a 1.3GHz data radio and found a tranciever unit that say s"Icom fx-609" Has anyone ever heard of this? I was wondering if I could tune it to 1.2GHz.

Any info would be greatly appreciated.

Thanks,

Scott Sidener N0WFL sidener@umr.edu

3184. Misc Ham Equipment FS

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: dkiefer@altinet.net
Message-ID: <33764c3b.29794342@news.altinet.net>
Source record: 175678

I have for sale, the following items. All with shipping included, and
Manuals unless noted:

KENWOOD: TS-870S with S)-2 txco unit and auto tuner. One
of the finest transceivers I've used. This unit was purchased on
December 23, 1995 as a Christmas present to myself. This unit
has been packed in its original carton, with all the accessories
that came with it originally, including the computer control program.
Unit is LNIB ready to be shipped to your ham shack.
Asking $1900.00

ICOM/MIRAGE/DRSI: IC-22A/B-108/DPK-2 Packet station. This
combination has been in use at this station running a BBS using
the FBB software now for the past 6 years. I took it off the air
2 months ago. Copies of many different BBS or Packet programs
are available on the Internet, and any of them would work very]
well with this package. Have only a copy of the manual for the
Icom, but have the originals for the amplifier and TNC. Will not
split this package up.
Asking $250.00

DRSI: Type 2 computer board. This unit has dual 1200 baud
ports, with both ports supplied with DCD-3105 state machines.
This allows monitoring with the squelch open, and has proven
to be the best way to receive packet. This board also was
being used in BBS mode on a third 2-meter frequency, running
at first 4RE software, then FBB software. The transceiver was
a Yaesu FT-2200, which has been sold. So this board is all
I have left from that setup. Nothing finer to use on packet
then a DRSI internal packet tnc.
Asking $195.00

HAL: PCI-3000/SPT-2 computer board. This unit will receive
RTTY, ASCII, AMTOR and CW. This board has the latest
updates that Hal has for it. The SPT-2 interface is one of
the best for tuning in signals. As good as a scope! This
as is the DRSI type 2 board, an 8-bit card, and will work
with an XT computer or higher.
Asking $165.00

Telex: Contester headset. Mic plug setup for the TS-870S
or any other Kenwood 8-pin mic setup. Excellent headset.
Asking $75.00

DRAKE: TV-3300 low pass filter.
Asking $25.00

All items ready to be shipped, and as stated above, include UPS shipping CON US. Reason for selling? I've lost most of my interest in ham radio. You can call me between 9:30 A.M. to 12 noon weekdays, and anytime after 9:30 A.M. on weekends. Or email at dkiefer@altinet.net

Thanks es 73 Don W5QXK

3186. What is a FT 767GX worth???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: "Terrence R. Redding" <pba-cct@flinet.com>
Message-ID: <33754A25.237B@flinet.com>
Source record: 175680

I am about to buy my fourth FT 767GX. I have one, but have a chance to buy a second one. The problem is, I don't know what they are worth.

All of mine have been purchased new. I had two damaged by lightning, so actually the insurance company paid to replace them.

There is a ham in my town that has one for sale. It's lithium battery has to be replaced. Apparently he spoked, so there is a great deal of grime from the smoke on the knobs and face plate. He lived near the ocean in an un-aircondtioned shack and so screws and knobs seem to have suffered from the corrosion.

It is missing two of the side or end feet, but other wise seems to work okay. It has a two meter module that also appears to work okay.

So the question remains. What is it worth?

I look forward to hearing from as many as possible.

Regards, Terry

From: Chatburn <chatburn@sympatico.ca>
Message-ID: <33767DBC.70C6@sympatico.ca>
Source record: 175685

Hi,
When I am my local mcdonalds drive-thru, if I set my car radio
to 92.5
fm I can hear what the employees are saying on the headsets or what the car behind me is ordering. I was wondering if there was some way I could inexpensively get hold of something so that I could chat along with these people. Or, a friend told me that you can make something which blocks out all radio signals and transmits something you say into a microphone on them. This would be good as I could then listen with my radio what people order then inform them not to because it is crap!

Thanks

DC

3192. Yaesu FT-1000D.. or is it?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: Richard Valentine <tde@ntplx.net>

radio to 100 channel with ample of special features.___

3195. FS: Kenwood TS 680S Full HF plus 6 meters

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: Don & Monica Casella <casella1@ziplink.net>
Message-ID: <33763330.6000@ziplink.net>
Source record: 175689
Cross-posted to: rec.ham-radio.swap,rec.radio.amateur.equipment,ne.forsale,ny.forsale,nj.forsale

Kenwood TS 680S HF with 6 meters.
-100 watts on all bands, 20 watts on 6 meters, all mode.
- Narrow CW filter
- SP 430 matching external speaker
- Orig. box, manual, and service manual.
$750.00 including shipping continental U.S.

The price is firm.

The only reason for selling is that I work full time and will be starting a Part-time Graduate program. I simply won't have time to operate.

3196. Which HT to start with?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: tnichols@nuteknet.com
Message-ID: <5l4i1r$92e@snews2.zippo.com>
Source record: 175690

I have just recently (yesterday) passed my technician exam and am looking for a good, inexpensive HT with which to start. When I say inexpensive, I mean anything around $200. I live in Raleigh, NC, and have found two stores close by that carry radio equipment and who also have web sites. Here are the models I am considering (in order as listed). They all have CTCSS encode/decode, and all the other std. options needed in a HT.

1) ICOM IC-T2A, $199. I am impressed with the features of this radio for the price. It has the widest TX (140-150MHz) and RX (136-174MHz) of any radio listed here.

2) Kenwood TH-235A, $189. This is the lowest priced radio listed, but is narrow on the TX range (144-148MHz). I have talked to a couple of hams who don't care for the Kenwood equipment, but I didn't really get a good reason why.

3) Alinco DJ-190T, $218. Nice options, but again a narrow TX range (144-147.995).

4) Yaesu FT-10R/H, $259. This one is a little pricey for me, but has the most all-around features of any radio listed here. The info I have doesn't list the TX and RX ranges.

5) Radio Shack HTX-202, $199. Although less expensive than the Alinco and Yaesu, I haven't seen many of these radios in use. Several hams have told me to avoid this radio.

Being new to this hobby, I still don't know all the things to look for in a radio, so I turn to the experts, you who are experienced. Any feedback would be appreciated. Please email me at timn@renewal-iis.com with any information about the above radios, or possibly another model I haven't listed in my price range. Also, if anyone in the Raleigh area reads this and has a used HT for sale, email me with the info.

Thanks!
Tim Nicholson, callsign un-issued at this time.

> Amateur Radio License: KE6YZZ

Bbbzzzz! Sorry, WRONG answer. Vanna has your door prize on the way OUT THE DOOR!

(BIG grin)

You got the two items mixed up. The other gentleman was asking about the HTX-242 MOBILE 2m radio, while you were thinking of the HTX-204 HANDHELD 2m / 70cm radio. :-)

As I understand it, the BIG reason why the 204 was so rapidly removed from the market was that it was easy to modify it (how, I have NO idea) to scan up and listen to the infamous "cell phone" frequencies. Which, as we all know, is a big, Federally-mandated "no-no". (sigh)

Anyway, if there IS a mod for the 242 MOBILE radio, I also would like the information, I would love to be able to talk back to my work on the radio, instead of just LISTENING to them. (Flames cheerfully ignored on this subject.)

Your mileage may vary. :-)

Source record: 175725

Allen, Most likely cause are the filter caps located near the power input. I have heard that these 2510s are rather underrated in the electrolytic cap area. The ratings on these are only 16 volts and convention says at least one and half times the expected voltage. I would recomend changing out any electrolytic with a better value for voltage say of 25 volts. The 16 volt ones are pretty over worked and then letting them sit dried them out.

3208. WTB: Non-Inductive Power Resistors & PolyProp. Caps

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: robertlars@aol.com
Message-ID: <19970511061600.CAA14064@ladder01.news.aol.com>
Source record: 175729

WTB:

1. 500 watt rated or higher, non-inductive resistors, 5% tolerance (if possible ?), 8 and 4 ohms.

2. 80mF PolyProp. Caps, 400 Volts rated.

If you have anything like this please e-mail me. Thanks.

Bob

3209. Hammerlund SP-600-JX ?

I have an old Hammerlund SP-600-JX all band receiver in good condition.
Anybody know what it's worth? I'd trade it for something if I knew what it
was worth. Email me at lemaniac@aol.com.

Thanks
John

3210. Kenwood Repair Suggestions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-11 00:00:00 UTC
From: cphillips@pobox.com
Message-ID: <5l3n6j$glk@redstone.interpath.net>
Source record: 175731

I have a sick Kenwood TS-940SAT and want to get it repaired.
(It's main problem is that it is almost totally "deaf" on receive.)

Around here, most people return their gear to Kenwood West...
generally the reports are good, but there are complaints of long
turnaround times.

I see ads for Kenwood repair in QST, etc. from several private
sources. What experience does anyone have witht these firms?

I searched Deja News, and in the past year or so this question
has been asked a time or two.
The only recommendation I could find was for Milton Lord, Ham Radio
Repair, Cartersville, Ga.

Any additional input would be appreciated.

Hi Jason,

The Icom IC-751A will receive from 100 kc to 30 Mhz, it's
a allmode AM, FM, CW, SSB. It will transmit on all Ham-Bands
and can be modifyed to transmit in other places. If you need
ant more info give me a call, I live in northern California.
I hope this helps you out.

Phone: 707-839-5228

See you later,
Boyd N6DMF

> cells for power. I'd be nost interested in impressions from anyone who
> has one already.
>
I used one (not owned by me) for a short time.
I did not buy the Standard, but finally purchased a Yaesu FT-50R.
The Standard's receiver seemed not as good on UHF as the Yaesu.
I only used alkalines in the Standard, cannot comment on the
rechargeable option.
The Standard is TINY. The FT-50R is small enough to fit into my
shirtpocket. I could put two of the Standard units in the same pocket.
I *like* the SMA antenna connector, I dislike the price of
aftermarket antennas with an SMA connector.
The Standard's LCD display is easier for me to read (glasses on
middle-aged eyes) than is the display on the FT-50R.
The Yaesu instruction book is better than the Standard book.
The Standard's transmitter power output is not adequate for me.
Your mileage may vary.

From: ham@w3eax.umd.edu
Message-ID: <5l4o93$i2q@dailyplanet.wam.umd.edu>
Source record: 175751

1) Selling for a friend - one Yaesu FT-50R. Xmit modded thru
hardware, freeband modded thru software. Excellent working
condition, with a few small nicks.

Receive/xmit 50-540 MHz
Receive 590-999 MHz

Comes with FNB-41 9.6v 600 mAh battery, duckie, wall charger
and manual. Yes, it receives cellular. PTT button is torn,
and a new one will be arriving from Yaesu anyday.

$300.

2) Selling for me, one Icom IC-2GXAT 7w 2m handheld. 40
memories (had advertised as 12 but this was incorrect), tone
encode and decode, tone scan (seeks CTCSS tone, displays it,
and locks on), VERY easy to use. With rubber gasket, duckie,
BP-160 700 mAh battery, wall charger and filtered cigarette
lighter adaptor CP-13. $275 new, asking $200.

Comes with photocopy of manual.

> antennas.

Cliff-

As Gary Coffman suggests, making sure things that *look* grounded *are*
is an important step. On my Grand Cherokee, that involved the tail pipe,
the hood, and a weird one that got rid of a surprising amount of noise,
the passenger side doors (possibly due to the computers on the passenger
side?). The tail pipe and hood I did with tinned braid. The doors just
needed a bit of paint scraping around the hardware and some contact
preservative on the screws/locking hardware.

>as a sniffer.

Richard gives some good tips on tracking and fixing mobile noise.
Let me just add a note on how to build a sniffer probe. Take a piece
of coax, 20 or 30 feet long so it can reach all parts of the vehicle when
connected to the radio, skin back and expose about 3 inches of the
inner conductor, form a loop and solder the end of the exposed inner
to the braid. This is your sniffer. When you bring it close to a noise
source, you'll hear it in the radio. The small loop will only strongly
pick up signals when it is very close to them.

Of course as Richard suggests, test the radio with no antenna first.
If you have noise then, it is coming in the power wiring. Richard's
suggestion to go straight to the battery (with both leads) is a good
one for dealing with this.

Subject: HR2510 Digital Display

Allen, Most likely cause are the filter caps located near the power input. I have heard that these 2510s are rather underrated in the electrolytic cap area. The ratings on these are only 16 volts and convention says at least one and half times the expected voltage. I would recomend changing out any electrolytic with a better value for voltage say of 25 volts. The 16 volt ones are pretty over worked and then letting them sit dried them out.

One of the Very Few, it would seem. Mine won't. All the first keyboard mod does is allow out of band RX. The second keyboard mod allows out of band TX. Still no cellular, AFAIK. Jumps right over.

Well if you made your stocking purchases on the strong Yen, likely
you could not stand the loss of dropping your selling price when the
actual value of the product was less under a weak Yen to Dollar ratio.
I suspect that is what is happening.

Subject: Kenwood Repair Suggestions

I have a sick Kenwood TS-940SAT and want to get it repaired.
(It's main problem is that it is almost totally "deaf" on receive.)

Around here, most people return their gear to Kenwood West...
generally the reports are good, but there are complaints of long
turnaround times.

I see ads for Kenwood repair in QST, etc. from several private
sources. What experience does anyone have witht these firms?

I searched Deja News, and in the past year or so this question
has been asked a time or two.
The only recommendation I could find was for Milton Lord, Ham Radio
Repair, Cartersville, Ga.

Any additional input would be appreciated.

From: Wayne Plack <plack@calweb.com>
Subject: Miniature AM Broadcast Receiver

I need a small AM radio (or AM/FM) that either fits IN the ear (like a real small hearing aid) or one that hooks over the ear (the bulk of the radio behind the ear, w/an audio tube leading to the ear canal opening - like a large hearing aid). I want to be able to wear the radio without the "headset look" (just one earphone - unobtrusive). Only the AM band (560 - 1600 KHZ) is desired though AM/FM would be OK. I've been looking all over for such a radio, and I cannot find.

Any help?

>73, Dick
>--
>Dick Flanagan W6OLD CFII Minden, Nevada

I just retired as production manager of the local daily paper, where among other things I was responsible for operation/maintenance of all computer systems - consisting of about 50 PCs and about 20 Macs. We *NEVER* turned them off, but did run screen savers on many of the color monitors. These sets would typically run about 5 years between failures, and most failures were cooling fans - followed by keyboards and monitors, then hard drives - in that order.

I think the key rule for an individual user would be that if your computer is used an hour or so EVERY DAY, it would be best to just leave it on - but some sort of surge protector is recommended. In this scenario, I would also leave the monitor on, but use a screen saver to even out wear and tear on screen coatings. There are mixed recommendations on merely turning down the contrast to darken the screen.

Oh yeah, by the way, those few computers in our business that WERE turned off regularly, failed MORE OFTEN than those left on continuously...

From: seifertr@ix.netcom.com
Message-ID: <3375f9e5.6511231@nntp.ix.netcom.com>
Source record: 175759
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I would like to connect my computer to my IC-706 transceiver, but I need the cable to connect the computer to the radio. MFJ sells the MFJ-5383i cable for $49.95, but I'd rather build my own cable.

(1) Can anyone direct me toward a schematic/wiring diagram for doing so? and (2) I prefer to connect the cable to my serial port; does the MFJ cable connect to the serial port or the parallel port? If I must use the parallel port, I will.

Many thanks,
Rich, KB2ZMF

That's not what he said. He wants a meter for his Swan 250 transceiver.
That has nothing to do with metres (wavelength). Get your facts straight
before posting.

Check out the new website on the net! N9SBV's Ham Radio Connection at Http://members.tripod.com/~n9sbv/Status.htm

This new system is oriented toward helping the new ham radio operator with resources he or she may need to get the most out of their hobby.

Lots of shareware available for download from the FTP Site. With 2 of the NEC 7 disk Changers online for starters, there is over 15 Gig online of all types of shareware software.

The WebServer is focused on Amateur Radio Related Areas. Homebrewing, Weather, RACES, FCC Rules and Regs, general Ham Radio Aids, and the like. And if you would like to put up a home page at the site....well I may even be able to accomadate a few users for that purpose. The site will be maintaining a Ham Radio focus however.

This site is located in South Bend, Indiana. It's my hope that it will become a major link for Operators in the Michiana Area to keep in touch locally and worldwide.

See you on the site!

I have the following items for sale. All are in mint condition and would
like to sell them ASAP, as I need the money for my college education. I am
willing to take B/O on all items. Email me if you are interested at:
amac@cape.com. Prices do not include shipping. Thank you.

Brand name Description Asking Price
Kenwood TM-742A Triband Radio (2m/220/440) $850
1.5 years old--220 module is 6 months old
Comet CX-333 2m/220/440 antenna and triplexer w/coax leads $250
Comet GP-3 2m/440 dual band antenna and duplexer-6 mos. $105
Cushcraft 13B2-13 element 2m antenna-up for one winter $100
Cushcraft A4496S-6 element 440mhz beam-up for one winter $25

Yaesu FT-51RH handheld 2m/440 transceiver with extended $450
receive range. Less than 2 yrs. old includes:
Speaker Mike with LCD display
1 lowpower small battery
2 High Power (5 watts) batteries
1 high power long life battery
leather carrying case
quick battery charger
cigarette lighter adapter

Radio Shack HTX-202 2m radio 3 years old-execellent condition $115
comes w/Radio Shack speaker mike
Radio Shack HTX-404 440mhz radio 2.5 years old-mint condition $120
extra battery

Icom IC-728 HF Transceiver-10 mos old. small burn with $1125
soldering iron on bottom of front display-comes with
Bencher BY-2 brass paddle--This rig rarely used.

Astron RS-12A 12 amp power supply (for kenwood) $40
RS-20A 20 amp-purchased new with HF radio $85

Power Station 3 amp portable lead acid battery pack $15

Kamtronics KAM plus version 8.0 (I think) with DC supply $265
7 months old

MFJ Mic switch for packet/mic on Kenwood VHF rig and $20
patch cord from Kam to HF radio (accessory port)

I can't see how it could be a great deal cheaper. Buying a good
automobile battery and a good battery charger is going to cost nearly
as much as the P/S. I will agree the battery/charger combination has
an advantage when the regular power fails.

So how did the therapy go?

Date: 10 May 1997 16:36:39 GMT
From: cwowen@aol.com (Cwowen)
Subject: Jeep Cherokee engine noise

I have an 1989 Jeep Cherokee 4.0 and an Alinco DX-70TH with two mag mount antennas. One is for the HF side and the other for 6M.
I am getting alot of engine and computer noise into the unit through the antennas.
It is not coming in through the power, no AC whine.
On 6M I am getting about an S6 of noise on SSB and about the same on 10M.
As I work down in frequency the interference decreases, and almost completely goes away at about 75M.
I have changed the wires and plugs, have rerouted the power, have tried grounding every thing.

Anyone out have this problem or possibly have a cure? And, yes I do realize that getting rid of the old Jeep and getting something newer would probably solve the problem, however, that is not an option at this time.
So, please....

Thank you,

Cliff Owen

Regrounding *everything* is always important on the Cherokee. It is painted
before assembly and many parts will not have good electrical connection.
On mine, the horn wouldn't even blow until I sanded paint from mating
surfaces.

That said, the best way to cure electrical interference is always to treat it
at the *source*. That means you need to locate the exact sources of the
noise you are experiencing and then treat them there. If the engine control
computer is a source of noise, suppress it *at the computer*. If the noise
is due to the fuel injectors, suppress it *at the injectors*. Etc. Use a small
"sniffer" loop on the end of a piece of coax to identify the noise sources
and use standard suppression techniques to deal with them right at the
source. You can chase your tail for months trying generic solutions. Be
systematic and solve the noise problems directly at their source and
you'll have a quieter vehicle, and in less time.

Subject: Make Money With Your Computer!

E-Mail Your Way To Riches!

Dear Friend,

We all know E-mail is here to stay. It's fun, easy and exciting! Would you be
interested if we could show you a way to make well over $1,000 per week doing it?

This is not a joke. You may have seen many people trying to tell you that you
can make money by joining this or that scheme! Guess what, you decide to
go for it and then you get nothing but frustration and disappointment! We
are here to take your frustration and disappointment into an Electrifying
Adventure!

We have been marketing on-line for almost 2 years now! We have never spent
one red penny on advertising and made nothing but profits. We can show you
how to make money every day of the year. Many people may think this is untrue
or it just can't be done. We are here to tell you that it is absolutely not true. The
biggest mistake people make about marketing on-line is that they sit and wait
for people to contact them. You will never make it if this is your approach and
we'll tell you why. There are over 60 MILLION people on-line right now, and
seven new people logging on every minute of the day world-wide and everyone

is offering something. So how do you get a potential client or a new customer before your competition does? The answer is simply " Creative E-mailing" and it WORKS! I'll tell you why. You're taking your product, service or idea directly to the market instead of waiting for the market to come to you!

Here are a few testimonials we'd like to share with you (They're all 100% TRUE!):

Internet Communications, my wife and I owe you so much. We ordered your Creative E-mail System and within the first week we received over $1,150 in orders for my Internet Consulting business!
--Charles -- California

I have bought two so-called E-mail programs that cost me over $600.00 when I received them. They were extremely difficult to operate and it took me about two weeks to figure them out. Once I did, they were so time consuming it just wasn't worth my time. When I received your course it took me about four minutes to install and I was in business! Within the first 24 hours of my first E-mailing I received over $580.00 in sales over the phone. That first week I grossed over $2,000.00! I really can't believe how easy you made this, anyone can do it! Thanks!
--Dennis -- Illinios

Hello, I'm a divorced mother of two children. I wanted to thank you for helping me out. This was my first time buying anything on the Internet. I was skeptical at first but I figured I'd take a chance. This was the best chance I've ever took! My part-time business is now a full-time home-business, thanks to your Creative E-mail System. I had to hire my two family members to help me out! This is GREAT, thanks so much! I'd recommend this for anyone!
--Ellen -- Florida

You may have seen other people offering products "E-mail Programs, E-mail Addresses, Extractors, Etc." The vast majority of these products are very over-priced and very difficult to even use. None of them even supply you with current, up-to-date, FRESH & RESPONSIVE E-mail addresses! Our Creative E-mail System puts everything into one package to make your profits soar immediately! Even if you do not have a product or service to offer, we are going to give you over 500 how-to reports that you will have full reprint rights to! What makes our course different from anything else being offered anywhere is that we're dedicated to your success! We do not succeed unless you succeed! All of our E-mail Address Databases are created in house. We do not trade our databases with anyone because people are selling extremely bad lists on the Internet. Many of other people's databases are filled with duplicate addresses and many of them are undeliverable. We keep our own database so we know exactly what we have and we keep nothing but the best. There's no other way. We believe in producing high quality products that should be priced reasonably for your success! Read on to see the special bonuses you will receive.

******** SPECIAL 10 DAY BONUS ********

If you order within the next 10 days we will include:

1) 500 How-To Reports (You may resell these at any price)

2) Your Personal Complete Guide To The Internet -- This 175 page e-book covers every single aspect of the internet. You will never have to buy another internet book! When you complete this book, you will know more about the internet than 90% of the people online right now.

3) When you purchase our 8 MILLION SUPER responsive E-mail list we will include Mega-Mailer. It sends 250,000 E-mails per hour! All other orders will receive Pegasus Mail. It mails about 30,000 per hour.

Here's how to get the Creative E-Mail System:

All orders are delivered on CD-ROM or 100mb Zip Disk (Iomega).

==========> E-Mail Databases <==========

2 Million FRESH E-mail Addresses only $ 99.95
4 Million FRESH E-mail Addresses only $179.95
6 Million FRESH E-mail Addresses only $249.95
8 Million FRESH E-mail Addresses only $299.95

You will be sending your Marketing Letter to 2, 4, 6 or 8 MILLION People! To mail to 2 MILLION People by U.S. Mail at $.32 per stamp would cost $640,000.00, not including envelopes or paper! The price of 2 MILLION E-mail Addresses isn't even a fraction of the cost. And the great thing is that if you have 10 products, you can E-mail to your list as many times as you want to! Your profits will never stop soaring! Don't pay someone else to send your advertisement out, do it yourself and save big money! The average cost right now to send your ad one time to ONE MILLION people is $1,400.00. You can send it 100 times to EIGHT MILLION people for only $299.95 and that includes Mega-Mailer that sends 250,000 per hour!

==========> Order Form <==========

Yes, Internet Communications Inc., I wish to take you up on your SPECIAL 10 DAY OFFER FOR YOUR CREATIVE E-MAIL SYSTEM, INCLUDING THE TWO SPECIAL BONUSES: "Complete Internet Guide Book" and "500 How-To-Reports". I understand I have to completely fill out the order form so you can fulfill my order.

WALTER! I have had 3ea. T-368's and 1 spare parts radio. I paid
$600. for the 1st one about 7 years ago and another 5 years ago for
$900., and a new one in the wooden crate about the same time $1200.
I traded one, (a used one this year) for a broadcast staion radio that
is worth at least $2000. For the ones that I have seen, they go all
over the place. I have my (parts only) radio for sale at $400.
Hope this helps some, Regards, ARTHUR KC6KUK . . .

Just out of curiosity, before you purchased the FT-8500, did you look at
the
Kenwood TM-V7A? I've been trying to decide on a good dual bander and
have
been looking at the FT-8100, FT-8500, and the Kenwood TM-V7A. I'd like
it
for mobile and like the idea of using it as a base station for 2m,
mainly
for packet at home. Anyone have any opinions on these radios?

Thanks!
Niel Brieger, KC5ZJR

I don't know if these problems are related, but, I couldn't use my Radio Shack speaker/mic with the FT-50 and audio adapter plug on VHF or UHF. RF was getting back into the radio (via the sp/mic cable), causing severe audio distortion -and- causing the radio to stay in the transmit mode after release of the PTT. I soldered 0.0047uF bypass capacitors on the mic/PTT audio lead and speaker lead to ground inside the audio adapter plug. That cured the problem. (Hint: I used SMD's, but you might be able to cram radial leaded ceramic caps. in there). Maybe the bypass would have been better done -inside- the radio, but I'm not -that- brave!

Gareth:

I had a talk with a technician here who services over 2000+ computers in this building this morning. He told me that the most common problem for him is what he called the "Morning Sickness".

He went on describing the problem to me: Hard disk failure (or not found) during power on in the morning. This is the problem with many older IDE and even some newer SCSI drives with power on/off cycles. The is caused by the hard disks won't spin up at the predetermined speed to be regconized as a valid boot device. Therefore, reported as disk failure. Also, he told me that this happens most often among the Seagate, Maxtor drives with Adaptech SCSI controllers combination. Temporary fix is to do numerous power cycle until the hard-disk spins up or take the hard disk out and spin the dirve back and forth in the same orientation which the hard-disk spins. He said that is common with many step motors with many stop and go actions. Also, by adding some silicon slick to the motor spining axle will help for the time being. Long term fix is to replace the hard-disk.

He said that computers with less frequent power cycle appear to have far less complains over this issue.

He also told me that static discharge seems to be the killer of all types of keyboards and mice; especially those Gateway 2000 "Anykey" keyboards. He said that these keyboards had 99% dead rate.

Regarding to real component issues on power cycle, he told me that the power supply is the main one. Since we now use only Compaq and HP equipments with UPS's, surge on main board problems have been zero throughout the years. Overheating is the only reason that kills the chips so far. For those overheated box are caused only by broken fan motors or dust buildup on the fan filter. Power down on these machines seems to have no long term effect as yet.

Hope this will help. Best 73!

3258. Kwd BS-5 to BS-8 Conversion

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: Clif <avvid@onramp.net>
Message-ID: <337726C1.1E4F@onramp.net>
Source record: 175625

To convert a Kenwood BS-5 to a BS-8 or vice-versa the following components need to be changed.

Component BS-8 BS-5
C231 68pf 1000pf
C232 1000pf .01uf
C233 33pf ---
C234 22pf 100pf
C236 22pf 47pf
C237 100pf 680pf
L203 8.8307 mHz 3.395 mHz
L204 4.7uh 20uh
T201 L34-0527-05 L31-0286-05

The Kenwood part number for the xtals (L203) are:
BS-8 L77-0487-05
BS-5 L77-0123-05

Note: The coil (T201) for the BS-5 shows to be discontinued so it may not be possible to convert an BS-8 to a BS-5 but the coil for BS-8 is available so coverting from a BS-5 to a BS-8 is possible.

Hint: The discontinued coil (L31-0286-05) is coil T4 in the Noise Blanker unit of a TS520S..

3262. TS 130 product detector

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <14461.863331427@safety.ics.uci.edu>
Source record: 175629

Anyone have a 130 where they replaced the cheap diodes in the product detector circuit with the schottky diodes? I have a 130V where they were replaced, and the audio out of it is a bit rough. I have used the little cap on the board to try to balance the detector, but can't get in the range, it seems to want very, very small values to get the audio smoother. Any thoughts? I suppose I could just get a very, very small cap and stuff it in there in place of the variable (and may do that), but wonder if I should understand what is going on.

>>I am impressed with the features of this radio for the
>>price. It has the widest TX (140-150MHz)...

So your criteria for an HT is its ability to illegally transmit?

>>Radio Shack HTX-202...Several hams have told me to avoid this
>>radio.

They are morons, unfortunately. Do not ask them for advice in the future, because they don't have any idea what they're talking about.

The HTX-202 - the world's most popular 2-Meter HT - is a solid performer. Your "friends" might not like the fact that is doesn't receive cellular phone calls or transmit illegally or have 1,000 memory channels. But if you want a solid, reliable, proven 2-Meter HT, the HTX-202 is an excellent piece of equipment.

3266. Servicing Manual for FT1000/D

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: Vince- ex: WV2RSX <WA2RSX@worldnet.att.net>;
Message-ID: <3377344D.A9@worldnet.att.net>
Source record: 175633

Hello and thanks for reading this:

I am considering buying the Servicing Manual for the FT1000/d.

Would like to hear opinions on its quality and usefulness.

Where can it be obtained and what is a reasonable price to pay ?

Tnx and 73s,
Vince

PSE reply to wa2rsx@worldnet.att.net via e-mail also.

Because of lawbreakers like that, we have a ban on 10m amplifiers. Because of lawbreakers like that, Radio Shack just recalled its new HT. Because of lawbreakers like that, the rest of us are being impacted by greater and greater restrictions.

In a perfect world, lawbreakers like that would be thrown in jail and the rest of us would be left alone. But this isn't a perfect world, so restrictions are placed on the inanimate objects that *we* use legitimately in response to the actions of lawbreakers like that. That's how we are harmed, and it is why we'd like to see lawbreakers like that in jail where they belong.

McDonalds has absolutely no sense of humor about that. And unlike amateurs, McDonalds has the clout to get the FCC to do something about it. Last year in Texas a man was apprehended for doing what you propose. His licenses (both commercial and amateur) were revoked, he lost his job and all hope of future employment in his industry, and he was assessed a large fine. Is making a nuisance of yourself to McDonalds employees and customers worth the risk? Your call.

>>...the only problem with [the Radio Shack HTX-202] is the error
>> message when one tries to use external power and the duck antenna.

Yes, this errormessage is well-documented.

But I bought my HTX-202 in 1994, and have NEVER run into that problem
using either the standard rubber duckie or even a Diamond RX-77CA
antenna (the 15" one) on a portable 12VDC power source (usually a
Quantum HAM Battery).

So...although a "well-documented" errormessage...has it REALLY occurred
to anyone who has purchased a *NEW* HTX-202 since, say, 1994???
Or is this a problem unique to older models only?

Yes it happened to a friend of mine about 2 years ago on a then
purchased HTX202. I read someplace in one of the Mod documentations that
this can be prevented by placing some beads on the red wire comming from
the battery pack plus.

I, too, just recently received my call and am interested in any
feedback on 2m HTs, either the ones mentioned or others such as
Standard, ADI, or ???

Also, what features should I look for (and what do they do?) in
a good, basic HT.

aco@almworks.com (Andrew C. Ohnstad) writes:

>
> BTW: Why would you want to transmit outside of 144-148?
>

I'm seeing a lot of comments about people who want to transmit "illegally" lately, and I can answer the above question for myself: because I'm authorized to but don't want to carry two (or more) sets of comm around. I am authorized to transmit on several public service bands during official SAR missions since I'm on a wilderness search and rescue team, but to carry around a ham radio, a SAR radio, a team 800MHz radio and a 40+ pound pack full of gear is asking a lot. So it is very useful to me to have a single HT which can be made to transmit on all the frequencies I need (except, of course, the 800MHz trunking radio, which is almost useless in the field anyway) --- missions typically use a few frequencies in the 155MHz range for inter-team comm, 155.160 for comm between teams and incident base, and ham bands for communication with ARES and extended-range communications through ham repeaters (it's really mountainous here, and sometimes we even set up cross-band repeaters in the field just to make sure teams don't get out of comm range with base camp). Does that make it a bad thing that I looked around for a radio which could easily be modified to transmit on the bands I have to use on missions? And were I to ask about a particular rig here and not explain myself fully, would I be asking for a flame?

I certainly wouldn't want a car battery in MY house. Sealed batteries
aren't. Battery fumes are corrosive and can be explosive.

The Astron is certainly easier to live with inside!

Hi,

I bought a KWD TH-78E about 3 years ago in England.
It had only 144-145 Mhz and 430-440 Mhz range but the
salesman gave me a combination of keys which enlarges
the recieve range. Now I just can't remember this combination.
If anybody knows please send me an E-mail.

Tnx a lot,

Yonatan.

3282. EIMAC 3-500Z QUESTION PLEASE

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: Murray Green <mgreen@erols.com>
Message-ID: <3377A780.5DBF@erols.com>
Source record: 175649

I recently purchased two brand new Eimac 3-500Z tubes. Great price, however, the tubes have been boxed and sitting on the shelf for a long time. I suspect, based on the tube serial numbers, since 1970. Physcially they look great and new.

Three respected local engineers and technicians suggested that I install the tubes and run them on filiment only for a minimum of 1 to a maximum of 6 hours before applying plate voltage. One suggested without the caps; the other said it did not matter. Filiment glows should be evenly matched.

It has been suggested that there is a possibility of vacuum leak by virtue of the tubes sitting for so long, although it is a remote possibility.

Was curious if any of you have had experiences with tubes of this nature that were new, but sitting around for long long periods. Any other suggestion you might add would be appreciated. Thanks.

PS The tubes will be used in the Kenwood Tl-922A linear. 73 MG

Source record: 175651

Hello all,
I have just noticed a problem with my TM733, and I was hoping that someone might have the solution. Last weekend I took a drive to Dallas and noticed that when I keyed various repeaters, the signal strength and audio quality of the squelch tail was about 2 s units stronger than when others were transmitting. I eventually learned that if I momintarily keyed the radio, the "improved receive sensitivity" would last for about 8 seconds. To complete a qso when I was some distance from a repeater, I ended up keying my radio every 10 seconds or so to here the other parties. I know it sounds strange but it is true. Any thoughts or comments are appreciated.

Tim:

I was very recently in the same boat as you are and faced with the
same question. I ended up purchasing an ADI Model AT-201H 2m radio
and am very much impressed with it (especially it's price 189.95
from AES). It has all the needed features and a few extras and was
highly recommended by my peers.

I have FOR SALE the following items:

1) Icom IC-701 with IC-701PS, 20A matching power supply.
Radio is in absolute tip top working condition and in excellent
physical appearance. Rig covers 160-10 meters (minus WARC bands)
SSB/CW/CW-N/FSK, 100 watt output. Included with this package is
the SM-2 desk mic, hand mic, extension terminal and manuals.
Radio was bought used at a local hamfest in 1988.

Will sell complete for $450.00

2) Realistic HTX-404 440 UHF HT w/ manual, Icom drop in charger,
battery assortment and speaker mic. Radio has about 10 hours of
on air time. Frequency coverage 440 - 450MHz, no extended receive.

Selling package for $200.00

Inquiries rgarding the above items can be forwarded to Denis, W1WV
via telephone at (508)324-6481 before 5:00PM EST or (508)674-0954
after 6:00PM EST.
or

On 11 May 1997 13:36:58 GMT, Timothy Nicholson wrote the following words about Which HT to start with?:

>
>5) Radio Shack HTX-202, $199. Although less expensive than the Alinco and
>Yaesu, I haven't seen many of these radios in use. Several hams have told me
>to avoid this radio.
>

I personally own one of these and have never had a problem with it. I'm not sure why people have told you to avoid it. There are only two issues I have with this radio. 1) Error-2. If you run external power (i.e. car lighter plug, power supply) you can not use the rubber duck antenna. RF leaks into the PLL and you get an Error-2. The solution is to use an external antenna. RS tech support comes through again!
2) There are absolutley NO mods around for this radio. I'd like to get extended recieve on my HT, because my local fire department is on 154MHz. But alas, there is no way to do this on a HTX-202.

I think it's a feature packed, inexpensive radio that's great for a beginner or old timer without a lot of money. It looks like a brick (and feels like one too!) which is why many people prefer other radios, but technically it's very sound.

BTW: Why would you want to transmit outside of 144-148?

>Being new to this hobby, I still don't know all the things to look for in a
>radio, so I turn to the experts, you who are experienced. Any feedback would

3301. TS-520S Help

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: Pete La Count <placount@mitre.org>
Message-ID: <33775C77.57FC@mitre.org>
Source record: 175668

Our club station TS-520S is not tracking properly (frequency wise) between transmit and receive with the RIT turned off. (Currently they use the RIT as a work-around, but this is not a proper fix.) The operators manual does not provide any procedure for correcting this problem, it only explains how to calibrate the RIT control. Examination of the schematic gives some possibilities but do not want to start twisting controls until we are sure. Would appreaciate any help in identifing which control can correct this receive/transmit frequency offset.

From: Thomas Gasta <tomgasta@worldnet.att.net>
Subject: FT-50RD OR AT-600

I don't know anything about the "AT600" but do have an FT50. Although the FT50 seemed like a radio packed with abilities, I have found Yaesu service and the RF section (UHF) of the FT50 to be poor. I had an FT40 (UHF only version) and had the same problems. The majority, I now have discovered, of FT50s have a problem when transmitting at the higher power levels on UHF. There is an RF problem that causes the radio to emit static sounding noise on the transmitted signal. This problem does not normally happen at the lower power levels, nor does it happen when transmitting into a dummy load or external antenna. After buying my radio on February 17th of this year, I have just received it back from Yaesu last monday from it's second trip to them for repair of this annoying problem. And, just like my first FT40, it still has the problem.
The real problem is that Yaesu is VERY MUCH AWARE of this design problem, they even have a service bulletin to "reduce the problem", note, not remove the problem, but, REDUCE the proble.

This repair is nothing more than a piece of copper tape placed over the UHF Power module and a mini spring (thats right, a mechanical spring) wedged between the outer case and a shield cover. This repair may work

on some, but not all FT50Rs. This combined with not having a radio more than 6 days over three months ownership leaves a bad taste in my mouth for Yaesu. My radio sat in a "black hole" for three weeks waiting for a Quality Control check by the service manager as it was a "second return".

The service manager was on vacation, later defined as sick leave (after 5th phone call), and when he returned and signed it off, it came back as bad or worse than when it left. Then when I call to complain to the service manager, seems he died! Seems nobody else can now make a decision. I suspect that with Radio in hand and a personnal visit to the Yaesu booth at Dayton, and a loud voice, I might get some satisfaction, if not a new replacement.

Now, before all the FT50 lovers get really pissed off, the radio if it worked, a very nice, greatly modifiable unit, and I truly looked forward to having one. The programming software for the unit makes it "easier" to program than by keypad, but is full of flaws and it's design can never be accused of copying someone like Motorola software. And, as I have now found, in 9 out of 11 FT50s in the area, the UHF noise problem was there but the owners had never noticed as they are normally talking on repeaters that are somewhat noisy anyway. The main selling point for me was the ability of the radio to do Digital Coded Squelch, and the noise problem sometimes causes a problem when using this system.

All I would suggest is that you immediately test the unit, before purchase if able, for this problem. If you can get one from the start without the problem, you would be very happy with it.

Tom

Subject: HELP! CES *T.T. Mike...

Can you help??

I have a CES (Winter Park, FL.) 700L *Touch-Tone Microphone.

**Do you have the Color Code for this Mike??

The Mike now has a connector for a GE-MVS series radio.

I contacted the company but they want $25 for a photocopy of the manual! At present the mike has a 8-pin Molex connector for GE~MVS. I would like to convert the Mike it to work on a KENWOOD UHF Radio. The Kenwood has a connector that looks like a modular telephone connector (only more pins)... I plan to build a junction box.

I HAVE data for the Kenwood Mike Connector, but I need data for the CES Mike!... While I would like to convert to a official CES Mike Cable for Kenwood, the cost is another $25! Plus, CES advised that the Mike would require modifications.

Any help with this project will be greatly appreciated! Any help with the switch on the back of the Mike, "AUTO" / "MANUAL"?

Many thanks!
Tony

From: seifertr@ix.netcom.com (Rich Seifert)
Subject: IC-706 XCVR to Computer Interface Cable, Help Please?

I would like to connect my computer to my IC-706 transceiver, but I need the cable to connect the computer to the radio. MFJ sells the MFJ-5383i cable for $49.95, but I'd rather build my own cable.

(1) Can anyone direct me toward a schematic/wiring diagram for doing so? and (2) I prefer to connect the cable to my serial port; does the MFJ cable connect to the serial port or the parallel port? If I must use the parallel port, I will.

Many thanks,
Rich, KB2ZMF

Mike,
I just read from www.primenet.com/~ke7gh/index16.htm that the
"HM77 DTMF Microphone is the best choice..." if a DTMF microphone is
desired. Check out the site for yourself...

Take care...

Richard gives some good tips on tracking and fixing mobile noise.
Let me just add a note on how to build a sniffer probe. Take a piece

of coax, 20 or 30 feet long so it can reach all parts of the vehicle when connected to the radio, skin back and expose about 3 inches of the inner conductor, form a loop and solder the end of the exposed inner to the braid. This is your sniffer. When you bring it close to a noise source, you'll hear it in the radio. The small loop will only strongly pick up signals when it is very close to them.

Of course as Richard suggests, test the radio with no antenna first. If you have noise then, it is coming in the power wiring. Richard's suggestion to go straight to the battery (with both leads) is a good one for dealing with this.

>Gary Coffman KE4ZV | You Make It | Email:

Gary,

Thanks for the reply, but I'm still unable to find any useful info.
I've downloaded John Hansen's (WA0PTV) radio control program, but
there are no plans to build the cable...he only recommends purchasing
the MFJ cable. Subsequently, I found a small circuit which converts
the RS-232 voltages to TTL levels and back; however, the circuit is
somewhat illegible and the broader context for its use is not
described (i.e. how does it get inserted in the cable between the comm
port and the XCVR port?) BTW, I found this at
http://www.synapse.net/~kentrol/ under the "PC Interfaces" menu,
"Level Translators" paragraph, "schematics" hypertext keyword in
paragraph.

I also noticed that the program I have will not work with Win 3.11,
which is what I have loaded on my notebook computer.

So at this point, I still need a circuit schematic, wiring diagram,
and additionally, the names/sources of some additional
shareware/freeware control programs (for both Win 3.1 and Win 95).
Sorry to pester...but please help...

Many thanks...

Best Wishes,
Rich

3309. Extended receive mod for Yeasu FT-26

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-12 00:00:00 UTC
From: fritter@NOSPAMgeko.net.au
Message-ID: <5l5ob5$j07@news.geko.net.au>
Source record: 175699

Hi All..
I was mucking around with my ft-26 hand held radio last night when
I stumbled across a way to get it to recieve from 130MHz to 174MHz.
It's simple:

1. Turn the radio off.
2. Turn it back on again while holding down BOTH the up and down arrow keys.

That's it! The set will now tune from 130 to 174MHz on receive!
If you try and transmit outside the ham band the disply say's "err", so
there's no worries about out of band tranmitions.

Good luck!

Graeme.....

The radio uses Icom's CI-V buss architecture. This is a party line buss
driven by OC drivers at TTL levels, IE it's sort of like ethernet. Icom sells
an interface which can break that out to RS232 serial, but it isn't cheap.
For controlling a single radio (the buss can control several, all daisy chained),
you can build a circuit to convert to RS232 levels and split Txd and Rxd for the
serial link. This circuit is a couple of transistors and a diode. MFJ builds this
into the cable. You can wire it up on a piece of perf board tucked inside the
DB connector of a homemade cable.

The circuit is included in the documentation for several of the shareware and
freeware programs you can use to control the radio.

>>Why do you ask? Do you hold MARS or CAP authorizations?

How are YOU being harmed by people who transmit out of band? How is anyone harmed? Does the public benefit in any way by requiring a ham, who already owns equipment capable of sending a clean signal on his company's channel, to not use that equipment and get a type-accepted radio from his company?

A person who is concerned about WRONGDOERS is doing his civic duty, a person who is concerned about RULEBREAKERS is a busybody, and a detriment to society.

This attitude reminds me of those people who go screaming to the homeowners association the minute they spot an antenna.

Yes, the FM bandwidth is not good for broadcast, BUT it's just
fine for the stuff you can't get with a FM BC RX'r, like,
TV audio, NOAA (136 MHz) signals, cell (if you're into that)
and, some other data stuff.

It can be modified (mars/cap) to xmit on 140-142 MHz.

I also own one, the only problem with it is the error message when one
tries to use external power and the duck antenna. If you plan to use it
plugged into the car, for example, also plan on getting an external
antenna. Otherwise you'll get a PLL unlock error (Error-2, I believe, it's
a well documented problem.)

I think it's a feature rich HT at a great price.

Subject: Extended receive mod for Yeasu FT-26

Hi All..
I was mucking around with my ft-26 hand held radio last night when
I stumbled across a way to get it to recieve from 130MHz to 174MHz.
It's simple:

1. Turn the radio off.
2. Turn it back on again while holding down BOTH the up and down arrow keys.

That's it! The set will now tune from 130 to 174MHz on receive!
If you try and transmit outside the ham band the disply say's "err", so
there's no worries about out of band tranmitions.

Good luck!

Graeme.....

Well if you made your stocking purchases on the strong Yen, likely
you could not stand the loss of dropping your selling price when the
actual value of the product was less under a weak Yen to dollar ratio.
I suspect that is what is happening.
I am sure most Amateur companies do not particapte in price protection
programs.

The radio uses Icom's CI-V buss architecture. This is a party line buss
driven by OC drivers at TTL levels, IE it's sort of like ethernet. Icom sells
an interface which can break that out to RS232 serial, but it isn't cheap.
For controlling a single radio (the buss can control several, all daisy chained),
you can build a circuit to convert to RS232 levels and split Txd and Rxd for the

serial link. This circuit is a couple of transistors and a diode. MFJ builds this
into the cable. You can wire it up on a piece of perf board tucked inside the
DB connector of a homemade cable.

The circuit is included in the documentation for several of the shareware and
freeware programs you can use to control the radio.

Gary,

Thanks for the reply, but I'm still unable to find any useful info.
I've downloaded John Hansen's (WA0PTV) radio control program, but
there are no plans to build the cable...he only recommends purchasing
the MFJ cable. Subsequently, I found a small circuit which converts
the RS-232 voltages to TTL levels and back; however, the circuit is
somewhat illegible and the broader context for its use is not
described (i.e. how does it get inserted in the cable between the comm
port and the XCVR port?) BTW, I found this at
http://www.synapse.net/~kentrol/ under the "PC Interfaces" menu,

"Level Translators" paragraph, "schematics" hypertext keyword in paragraph.

I also noticed that the program I have will not work with Win 3.11, which is what I have loaded on my notebook computer.

So at this point, I still need a circuit schematic, wiring diagram, and additionally, the names/sources of some additional shareware/freeware control programs (for both Win 3.1 and Win 95). Sorry to pester...but please help...

Many thanks...

Best Wishes,
Rich

That is Paul Kluwe, W8ZO. I just installed my new panels from him, and they
are beautiful. Pkluwe@aol.com $150 for all three panels, shipped.

Subject: Rode & Shawrtz BN15075 Receiver

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

73s, ON1DJU

Subject: What is a FT 767GX worth???

I am about to buy my fourth FT 767GX. I have one, but have a chance to
buy a second one. The problem is, I don't know what they are worth.

All of mine have been purchased new. I had two damaged by lightning, so
actually the insurance company paid to replace them.

There is a ham in my town that has one for sale. It's lithium battery
has to be replaced. Apparently he spoked, so there is a great deal of
grime from the smoke on the knobs and face plate. He lived near the
ocean in an un-aircondtioned shack and so screws and knobs seem to have
suffered from the corrosion.

It is missing two of the side or end feet, but other wise seems to work
okay. It has a two meter module that also appears to work okay.

So the question remains. What is it worth?

I look forward to hearing from as many as possible.

Regards, Terry

W6LMJ

From: tnichols@nuteknet.com (Timothy Nicholson)
Subject: Which HT to start with?

I have just recently (yesterday) passed my technician exam and am looking for a
good, inexpensive HT with which to start. When I say inexpensive, I
mean anything around $200. I live in Raleigh, NC, and have found two stores
close by that carry radio equipment and who also have web sites. Here are the
models I am considering (in order as listed). They all have CTCSS

encode/decode, and all the other std. options needed in a HT.

1) ICOM IC-T2A, $199. I am impressed with the features of this radio for the price. It has the widest TX (140-150MHz) and RX (136-174MHz) of any radio listed here.

2) Kenwood TH-235A, $189. This is the lowest priced radio listed, but is narrow on the TX range (144-148MHz). I have talked to a couple of hams who don't care for the Kenwood equipment, but I didn't really get a good reason why.

3) Alinco DJ-190T, $218. Nice options, but again a narrow TX range (144-147.995).

4) Yaesu FT-10R/H, $259. This one is a little pricey for me, but has the most all-around features of any radio listed here. The info I have doesn't list the TX and RX ranges.

5) Radio Shack HTX-202, $199. Although less expensive than the Alinco and Yaesu, I haven't seen many of these radios in use. Several hams have told me to avoid this radio.

Being new to this hobby, I still don't know all the things to look for in a radio, so I turn to the experts, you who are experienced. Any feedback would be appreciated. Please email me at timn@renewal-iis.com with any information about the above radios, or possibly another model I haven't listed in my price range. Also, if anyone in the Raleigh area reads this and has a used HT for sale, email me with the info.

Thanks!
Tim Nicholson, callsign un-issued at this time.

The weather here in Ohio has been terrible so far this month. Yesterday would have been nice. Although you may not need a winter coat, be sure and bring rain gear. In fact, maybe someone could by 4000 panchos to sell in the flea market, that would just about insure nice sunny days!

yeah, it seems true. that's why Radio Shack recalled HTX-204 which
is the co-version of AT-600 (I heard same thing from many rumors + it
is actually on ADI home page).

> This seems almost too good to be true, and it probably is. My

use RS's scanner antenna.(metal version) It supports transmitting
for VHF and UHF bands also.

I purchased AT-600 and it is on the way to home.
I will let you know as soon as I get the tranceiver in my hand.

Both Radios havew some unique features so it is a hard decision.
The Yaesu has "Dual Out of Band Watch" and the Icom has only duel watch
inside the same band. The Icom has the famous spectrum scope. etc
It is tough. I may wait till QST Magazine does a review of the radio.

CUSHMAN COLLECTORS ONLY - -

Pristine MCM-5 about to be orphaned. 1972 vintage;
original factory cal and inspection paper tag still
tied to carrying handle, front cover with original
cal sheet dated Dec 7, 1972 STILL IN PLACE,
has 0.0001% high accuracy factory mod built in,
has the "newer" nice rectangular plastic-faced
Weston meter, single owner unit, high 8 on the
venerable one-to-ten scale as far as physical
condition goes. About forty factory crystals
installed for various commercial bands.

NO MANUAL. Operational condition unknown,
but was in service when replaced with newer
equipment.

DROP DEAD DATE to make an acceptable offer
is Wednesday, 05-21. (Broad hint: the first
offer I get that covers the shipping will probably
get it, so I'd hurry if I were you...)

This unit cries out to be in your shack!! Don't
wait! Someone else is probably composing
an offer as you read this!

The unit is currently located in the People's Republic
of California.

PS - I'm still actively looking for plug-ins, internal circuit
boards and/or a spare CE-6 (or CE-6A). Especially want
an EXTENDER BOARD for servicing the plug-ins...
Will pay cash!! Please contact me!!

3333. Re: Which HT to start with?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: "Rev. John A. Ryding" <zionluth@southwind.net>
Message-ID: <3378A044.53E3@southwind.net>
Source record: 175523

In reference to being authorized on certain frequencies:

It has been posted here more than once that having authorization to transmit does not carry with it the authorization to use a non-type accepted radio. I am in a similar position as ARRL EC for ARES and EMS Captain (155.340 Mhz). I have a radio that will transmit out of band. However, it is not type accepted and to use it out of band is gambling my hard-earned license. True, the FCC most likely does not have the time to track me down, but is it worth it to you? And if your license is revoked, they also have the proof to fine you up to $5,000 per offense, which can be interpreted every time you key the radio. $5,000 buys a lot of radios!

Be careful. Also remember, in life and death situations, the rules go out the window in order to help those in need.

John - WW0H

3343. Icom Z1A intermod?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: David Mueller <dmuel19@mail.idt.net>
Message-ID: <3379279E.F4F518E1@mail.idt.net>
Source record: 175533

I just recently picked up a reconditioned Icom Z1A and like the radio. I am just concerned about an interference issue. I drive in/out of metro Chicago and when I get in the heart of the city, around alot of trucks, businesses etc. I sometimes hear alot of intermod noise. I can tell that it is not coming from the repeter I am monitoring. It will sometimes overpower the repeater signal. Its attached to my Cushcraft CS270M dual band antenna. SWR is 1.1 across both bands.

The question is is it the radio not being slective enough or something else?

Anyone have any things to try to isolate.

Dave..KB9POU

3344. Re: FT-50R and VX-10

It's a nice thought, but I expect not. I have both the FT10 and FT50, and, in Yaesu's infinite wisdom which I never question, they used opposite connectors on the two radios. If you look at a good accessory list (like AES), that's why Yaesu offers two different SMA-to-BNC adapters for the series. I can't honestly say I've seen a VX10, but my guess is it is the same as the FT10.

3345. 3-500Z Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970513.161316.9671.6.km1h@juno.com>
Source record: 175535

The first question I would ask is how were the tubes stored? If they were stored horizontally for many years you may have a problem with a filament to grid short.; the only cure there is to either store them the opposite way for a few years or run them in a centrifuge. Too many hams do not understand proper storage procedures. Get out the Ohm meter and test first.

Another old wives tale is to run the tube with filaments only for several hours or days in order to remove gas. That is pure GAS. Residual gas is removed at the time of manufacture thru a gettering process and yes, over time the tube may become contaminated.

One way to tell is to operate the tube with plate and filament voltage in a cut-off condition and look for the tell-tale purple glow. Viewing in a room with all lights turned off will help a lot. I recommend using a plate voltage under 2KV for this initial test. A good 3-500Z will hi-pot well over 12KV; if it arcs over at 2KV it is probably beyond saving. If all is OK then try drawing a bit of static plate current; no more than 50ma per tube.....NO RF drive. Check for the purples again. If OK run at full idle current and then slowly inject RF as mentioned a few paragraphs below. Keep watching for gas.

The gettering agent in an Eimac or any other Tantalum plate tube is Zirconium and is the grey powdery substance coating the plate. In order for it to function it must be run at very high temperatures and in the case of a long stored tube it depends a lot upon the amount and type of gas.

De-gassing a 3-500Z in a ham amplifier can be accomplished but requires a bit of care since the tube will be running with a LOT of dissapation. I only recommend this if you have a chimney style air system with lots of air.
The tube must be run under DC conditions ONLY; not RF. This will require bias changes so that the idling current approaches the tube ratings, you want it to run bright red. Run the tube(s) for about 10 minutes this way and then let it cool down.
Re-bias and prepare for RF drive. Use the lowest plate voltage available and bring the drive up very slowly while maintaining reasonance....keep watching for a purple glow. Watch the grid current meter for any flickering or other instability.
You can repeat the gettering process 3 or 4 more times if necessary; after that the tube is either good or junk.

I have bought many new tubes back to life this way, over the past 40+ years. Lost a bunch also. The above procedure is only for Tungsten filament and Tantalum plate tubes. The procedure is a bit different for

Graphite plates and totally different for indirectly heated tubes.

On a slightly different note, tired tungsten filament tubes can often be restored by operating the filament only for about 10 minutes at about 1.5 times normal voltage. This will boil off the oxide contamination. Just remember to keep PLENTY of air on the tube pin seals.

73 and good luck......Carl KM1H

From: "Flasheart" <flashear@euronet.nl>
Subject: TMV7 remotecontrol & voice awnserback?

Dear TMV7 users,

Playing around with the Kenw. TMV7 I was paticulary fond of the remote
control option of the rig.

You can change a lot of things from VFO freq. to CTCSS from your HT and
there is an option for the rig to
give a confermation beep on the control freq.

It's nice but when changing things you lose tarck of the changed functions
when you are not in the shack.

So the question is:

Does anyone know the TMV7 with the voice unit installed has the option to
awnserback or give
the status of the rig in voice on the control freqency ?

Thanks for the response via email or in the newsgroop

Source record: 175538

Randy,

DON'T TURN UP THE MODULATION CONTROL!!!

This is the only audio level control on the radio. Turning it up will
increase the audio, but the first time you press a DTMF tone, you will
damage the final driver, and this gets expensive (I know).

The right answer is to open the microhpone, and look at the rear of the
electret element. Soldered accross it is a limiting zener diode. The
factory value of this diode is 4.7V, and the sometimes fail (Icom used
the cheapest diode here they could find). First with Key down, measure
the voltage accross the diode, if it is lower than 4 volts, replace it
with the 4.7V diode and try again. If the voltage is close, but you are
still not getting the gain you want, replace the diode with a 9.1V
diode. Normally this will solve the problem (It did mine).

FYI & FWIW... The manual gives a "keyboard mod" to extend the
transmit and receive down to 430-MHz but that's also in the ham
band. Would that still be extended receive? :-)

Yes that is true, but that is the only problem with it and frankly,
not very seriouse. Then there is hardly another one with everything
build in (DTMF code/decode, CTCSS code/decode) and you cannot beat the
price. I have got 2 HTX-202 three years ago and they never let me down
so far. Very reliable and useful for every environment. It gives you
over 10 watts output with external power supply (13.8 V) and is
excellent for mobile and stationary operation as well.

3360. Honest opinion on KENWOOD TM-V7A ...

Oh, and by the way... I just reciently purchaced an Icom T22A, to rid
myself of the HTX-202's Brick like shape, size, and weight. But the Icom
is actually missing a few things the HTX has, like CTCSS Decode. But it
recieves from 10.0 Mhz to 999.900 Mhz, so it oblitherates my need for a
portable scanner. :)

Yes, you probably would. And that's because, to my knowledge, no currently
sold amateur HT is Type Accepted for other services. It doesn't matter that
you have a license or authorization to operate on the frequencies of other
services, the *radio* isn't authorized for use in that other service (MARS
and CAPare exceptions of course because they fall under military jurisdiction,
and the military doesn't have to follow FCC regulations, but other public safety
services *do*). So you'd still be asking for advice on how to break the law, and
incidentally putting your department's license in jeopardy. That would draw flames,
as it should.

I find it quite disturbing that police, fire, and rescue workers would be so willing
to disregard the law for their convienence. Now grant you it may be a *stupid*
law, but it is the law, and until it is changed you should abide by it. If you want
to lobby the FCC to eliminate Type Acceptance, I could be convinced to sign
on to that effort. But I won't support people who intend to just flaunt the law.

3367. Passive VHF Repeater?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: "C. A. La Varre" <alavarre@amaranth.com>
Message-ID: <5l8h5l$75d@news.amaranth.com>
Source record: 175577

Is there such a critter for VHF?

I have one for my cellphone, which clips on the window and allegedly gives me something like 3 dB gain over the HT. It has a coil which provides some sort of autoresonance to "boost" the signal for an HT being used inside the car.

My problem is really marine VHF, but 144MHz gear would prolly work... The marina wants to be able to receive calls from a long distance, so they have a base station with a whip on a telephone pole. But then they have to put it on a loudspeaker for the marina personnel to hear it when they're out of the office. The loudspeaker is driving the tenants and neighbors rabid.

It would be nice is there were some sort of passive repeater, e.g., a glorified corner reflector, which you could put on the top of the pole and have it reflect the signals down to the docks; then the personnel could use HTs to hear and respond, and the neighbors would be pacified...

If there isn't I guess I'll do some pro bono experimentation...:-(

TIA, and 73,
Andy La Varre

I just purchased a Swan 350 rig, unfortunately while the rig is immaculate, there was no manual.

If someone has a manual and other any other experience with the rig they could pass on it would be greatly appreciated. I will be more then glad to reimburse you for photocopy and postage expense.

Thanks in advance

I have one too..... it is good as long as you do not try to modify
it. you will never be (?) possible to extend rx/tx from 144-148.

A car battery can be had for what - $40-$50 or so? Even less for a
used one. Remember you don't need a huge battery with a high cold
cranking amps rating. A trickle charger can be built from junkbox
materials. On the other hand, the RS-35A goes for about $145 plus
shipping. Your call.

MG,
Having had tons of experience with this particular tube in
Henry Amps., I would follow the advice of running them for at least 6
hours, with caps on, then after low power (Vp) operation, leaving them
on, resting the tubes, for at least 30 min., rexmitting again for a
period of intermittent (SSB) xmissions, after resting them again for
thirty (30) mins., bring up the (Vp) to Full Power Output and continue to
use them in your normal fashion, or operating cycle. I do however suggest
you not turn off, your TL-922 for at least 8 hours following this break-
in period. Although instant on, give your tubes the benefit if the doubt
at start-up.

This is definitely possible. It sounds to me like the microphone
circuit on the HTX-242 is picking up the CB RF and rectifying it.
(much like your average cheap telephone<g>)

I forget whether a HTX-242 is a HT or a mobile. If a mobile, (or a HT
with a speaker/mike) try one of Radio Shack's toroid choke cores on
the microphone cable, as close to the radio as possible. If you're
using an external power supply, the power cable may also need one. If
it's a HT but no speaker/mike - then there really isn't much you can
do, other than make sure the HTX-242 is off when you transmit on CB!

Subject: Comments on HTX-202

>>...the only problem with [the Radio Shack HTX-202] is the error
>> message when one tries to use external power and the duck antenna.

Yes, this errormessage is well-documented.

But I bought my HTX-202 in 1994, and have NEVER run into that problem
using either the standard rubber duckie or even a Diamond RX-77CA
antenna (the 15" one) on a portable 12VDC power source (usually a
Quantum HAM Battery).

So...although a "well-documented" errormessage...has it REALLY occurred
to anyone who has purchased a *NEW* HTX-202 since, say, 1994???

Or is this a problem unique to older models only?

Subject: EIMAC 3-500Z QUESTION PLEASE

I recently purchased two brand new Eimac 3-500Z tubes. Great price, however, the tubes have been boxed and sitting on the shelf for a long time. I suspect, based on the tube serial numbers, since 1970. Physcially they look great and new.

Three respected local engineers and technicians suggested that I install the tubes and run them on filiment only for a minimum of 1 to a maximum of 6 hours before applying plate voltage. One suggested without the caps; the other said it did not matter. Filiment glows should be evenly matched.

It has been suggested that there is a possibility of vacuum leak by virtue of the tubes sitting for so long, although it is a remote possibility.

Was curious if any of you have had experiences with tubes of this nature that were new, but sitting around for long long periods. Any other suggestion you might add would be appreciated. Thanks.

PS The tubes will be used in the Kenwood Tl-922A linear. 73 MG

L203 8.8307 mHz 3.395 mHz
L204 4.7uh 20uh
T201 L34-0527-05 L31-0286-05

The Kenwood part number for the xtals (L203) are:
BS-8 L77-0487-05
BS-5 L77-0123-05

Note: The coil (T201) for the BS-5 shows to be discontinued so it may
not be possible to convert an BS-8 to a BS-5 but the coil for BS-8 is
available so coverting from a BS-5 to a BS-8 is possible.

Hint: The discontinued coil (L31-0286-05) is coil T4 in the Noise
Blanker unit of a TS520S..

Subject: TH-78 /question

Hi,

I bought a KWD TH-78E about 3 years ago in England.
It had only 144-145 Mhz and 430-440 Mhz range but the
salesman gave me a combination of keys which enlarges
the recieve range. Now I just can't remember this combination.
If anybody knows please send me an E-mail.

Tnx a lot,

Yonatan.

Subject: Which HT to start with?

>>I am impressed with the features of this radio for the
>>price. It has the widest TX (140-150MHz)...

So your criteria for an HT is its ability to illegally transmit?

>>Radio Shack HTX-202...Several hams have told me to avoid this
>>radio.

They are morons, unfortunately. Do not ask them for advice in the
future, because they don't have any idea what they're talking about.

The HTX-202 - the world's most popular 2-Meter HT - is a solid
performer. Your "friends" might not like the fact that is doesn't
receive cellular phone calls or transmit illegally or have 1,000 memory
channels. But if you want a solid, reliable, proven 2-Meter HT, the
HTX-202 is an excellent piece of equipment.

about Which HT to start with?:

>
>5) Radio Shack HTX-202, $199. Although less expensive than the Alinco and
>Yaesu, I haven't seen many of these radios in use. Several hams have told me
>to avoid this radio.
>

I personally own one of these and have never had a problem with it. I'm
not sure why people have told you to avoid it. There are only two issues I
have with this radio. 1) Error-2. If you run external power (i.e. car
lighter plug, power supply) you can not use the rubber duck antenna. RF
leaks into the PLL and you get an Error-2. The solution is to use an
external antenna. RS tech support comes through again!
2) There are absolutley NO mods around for this radio. I'd like to get
extended recieve on my HT, because my local fire department is on 154MHz.
But alas, there is no way to do this on a HTX-202.

I think it's a feature packed, inexpensive radio that's great for a
beginner or old timer without a lot of money. It looks like a brick (and
feels like one too!) which is why many people prefer other radios, but
technically it's very sound.

BTW: Why would you want to transmit outside of 144-148?

Tim:

I was very recently in the same boat as you are and faced with the same question. I ended up purchasing an ADI Model AT-201H 2m radio

and am very much impressed with it (especially it's price 189.95
from AES). It has all the needed features and a few extras and was
highly recommended by my peers.

End of Ham-Equip Digest V97 #523
****

Following is a list of Ham gear I'm parting with. The
prices are negotiable, and I'm mainly interested in
selling everything on this list, so there will be some bargains.

Manuals and documentation furnished where available. Here's the list:

1. CDR Rotor Control Box. Series 4516, for use with HAM-M rotators. $20.00, plus $5.00 UPS freight.

2. Complete RTTY, CW and ASCII digital station. INFO-TECH M-300C Keyboard. Transmits RTTY, CW and ASCII at all normal speeds and shifts. INFO-TECH M-200F, RTTY/CW/ASCII Demodulator. Copies all standard speeds and shifts, and has video output, printer support, etc. Taxan 14" Amber Video Monitor. Complete system $200.00, plus $25.00 UPS freight.

3. "Digi-Designer" Work Station. Complete digital IC test and construction aid, with internal clock, (1 to 100K speeds), four logic switches, two pulsers, IC test and assembly block. Built in 110VAC power supply, (TTL voltages output). $25.00, and $5.00 UPS freight.

4. Homebrew WB4VVF Iambic "Memory Keyer". $20.00, $5.00 UPS freight.

5. Homebrew WB4VVF Iambic Keyer, with built in clock and 10 minute timer. $20.00, $5.00 UPS freight.

6. 5-Volt, 1 Amp, "Calectro" Regulated TTL Power Supply. $10.00, $3.00 UPS freight.

7. Six element 450 MHz Beam Antenna. $20.00, $5.00 UPS freight.

8. "Hustler" MO-2 Folding Mobile Antenna Mast. $10.00, $3.00 UPS Freight.

9. New Kenwood PG-2 DC Power Cable. Fits TM201, TM211, TM401, TM411, TM2530/2550/2570, TR8400/9500, TR751, TS670, R600/1000/2000. $5.00, plus $3.00 UPS freight.

10. Sold.

11. Drake 7073DM Hand Held Microphone. $10.00, $4.00 UPS freight.

12. New Radio Shack Dynamic Hand Held Microphone, with 5-pin DIN type connector. $5.00, and $3.00 UPS freight.

13. Kenwood Dynamic Microphone, 500 Ohm, 4-pin connector. $10.00, $4.00 UPS freight.

14. "CALRAD" D-350 Dynamic Desk Microphone, 50K impedance. $10.00, $4.00 UPS freight.

15. New Yaesu YM-23 Condenser Hand Microphone, with 4-pin connector. $10.00, plus $4.00 UPS freight.

16. "Swan" SWR-1Aa Power and SWR Meter. $15.00, plus $4.00 UPS freight.

17. "Siltronix" SWR-2, Power and SWR Meter. $15.00, plus $4.00 UPS freight.

18. Forty-foot Rohn 25 Ham tower, with a HyGain TH-3 "Thunderbird" 10-15-20 Meter Beam antenna. Telex "Tail Twister" Heavy Duty Rotor, and Control Station. Three element two-meter

beam, and Ringo Ranger two-meter vertical antenna, installed on
tower. Pick up only in Rapid City, SD. Bargain priced at $700.00 firm.

19. HAL Communications PCI-3000 PC Computer Board. Excellent
digital communications, (RTTY, CW, ASCII and AMTOR). Complete documentation.
Bargain priced at $175.00, plus $7.50 UPS shipping.

20. "Bencher" ZA-1A Balun. $5.00, plus $3.00 UPS shipping.

21. Heathkit IT-741D Logic Probe. $15.00, plus $4.00 UPS shipping.

22. Heathkit "Cantenna", 1KW Dummy Load. $20.00, plus $7.50 UPS shipping.

23. Epson MX80F/T Tractor Feed Dot Matrix Printer, with roll
paper adapter. $50.00, plus $10.00 UPS shipping.

24. New "Pro-AM" Two-Meter Mobile Antenna, (surface mount). $15.00, plus
$5.00 UPS shipping.

25. Sencore Digital Volt Meter. $10.00, plus $5.00 UPS shipping.

26. "QST" Magazines. January 1974 to March 1997, complete, 288
issues! $50.00, plus $20.00 UPS shipping.

27. "Ham Radio" magazines. Bound editions for years 1976 and
1977. $10.00, plus $7.50 UPS shipping.

28. CY-1300 Oscilloscope. Military surplus and makes a good RTTY,
AMTOR, Clover, monitor. $10.00, $10.00 UPS shipping.

73.....and thanks.....Dick, K0VKH

Best Regards!

3382. G5RV to a Yaesu 101..Ideas??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: nolanke@tcd.ie
Message-ID: <nolanke-1305970801090001@mac03.hamlab4.pclab.tcd.ie>
Source record: 175592

I am considering erecting a G5RV using trees. I intend using the Inverted Vee idea with the apex on top of a 60-70 foot tree and the angle between the wires at 120 degrees. What I would like to know is:
1. What impedance cable should I use to connect the S0239 on the ribbon feeder of the G5RV to my proposed rig (Yaesu FT 101ZD Mk.3) via an A.T.U.?
2. Will the presence of the tree lower the electrical field of the antenna as I believe a high field will develop at the apex and if so, what can I do about it?

Many thanks for your time and help. I will have my A-licence in about a fortnight so I look forward to working you.

Keith Nolan.

3383. TMV7 remotecontrol & voice awnserback?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: Flasheart <flashear@euronet.nl>
Message-ID: <01bc5f78$b12c0e60$0100007f@showroom>
Source record: 175593

Dear TMV7 users,

Playing around with the Kenw. TMV7 I was paticulary fond of the remote
control option of the rig.

You can change a lot of things from VFO freq. to CTCSS from your HT and
there is an option for the rig to
give a confermation beep on the control freq.

It's nice but when changing things you lose tarck of the changed functions
when you are not in the shack.

So the question is:

Does anyone know the TMV7 with the voice unit installed has the option to
awnserback or give
the status of the rig in voice on the control freqency ?

Thanks for the response via email or in the newsgroop

Personally, I would save up a little more cash and get a *much* better
HT. I have had over amateur HT's, and the best yet is the Yaesu FT-50RD.
I bought it last month for only $349 from Ham Radio Outlet in Atlanta
(comes with two battery packs). And no, I don't work for any electronics
supplier.

The HTX-202 & -404 are both good rigs, and I think their major strength is the fact that they are designed for operation only in their respective bands (2m & 440). This provides a much better front end on the rigs and I have to say from experience that mine seem to be immune to intermod.

I don't know exactly what you are looking for, but I choose HT's based on performance, not just features. Later....

3389. Test Equipment FS - Can Deliver to Dayton

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-13 00:00:00 UTC
From: Chuck Hatcher <chatcher@ramlink.net>
Message-ID: <5l9qrg$4dj$2@news.campus.mci.net>
Source record: 175599

I need to liquidate the following equipment:

CT Systems (Wavetek) 3000B Service Monitor, unused, $2000
HP 204C Oscillators, $65 - $125, depending on cosmetics.
HP 8640B Opt 323 Signal Generator, $850
Millivac MV-823B-S1 RF Millivoltmeter, $225
Tektronix 7623A 100MHz Storage Mainframe, $300
Tektronix 7854 400MHZ Digital Storage Mainframe with Keyboard, $650
Tektronix 466 Portable Storage Scope, $375

I trade for General Coverage Receivers & Ham Gear.

I will be at Dayton on Saturday only and can deliver there.
A few other items listed at http://www.chaos1.com/elex .

Hi Vince,
In my opinion, the service manual is very disappointing. It
has no comprehensive circuit description of the radio.
Nearly all of the manal is devoted to diagrams of circuit
board layouts, with no explanation. There are no
troubleshooting tips. About the only useful content is a
brief set of alignment instructions -- which really aren't
very helpful because the set's alignment is very stable.It's
the worst service manual I've seen.

73,

Jim W8ZR

sounds like a good application for a cross-band repeater. VHF into
the base which repeats to the HTs on UHF. The personnel on the dock
could then also respond via the HT and not have to return to the
office for every call.

Hope this helps...

From: baack@maine.edu
Message-ID: <5la02l$1src$1@sol.caps.maine.edu>
Source record: 175605

Greetings all,
I just picked up a Microwave Modules LTD.
"low Noise RF switched preamplifier"
for 2 meters ssb.

it is encased in a 5 x2x1 black box with so-239 connectors for the
antenna in and out, as well as a 5 / (6?) pin plug to power it.

Any idea on the following?

- Noise Figures
- Amount of RF that pass through the preamp
- A manual??

Any help or direction to help would be great....

Hi Rick:

Im sorry that those that gave you answers, did not post to the
NewsGroup. I have similiar inquiries about the FT1000/d.

It is my understanding that there is a 600 Hertz filter available as
an add-on to the 1000/d. Im not clear if a second 250Hertz at the 3rd
I.F. is included in the 1000/d.

I have this thread marked to watch with Free Agent, but I think I have
missed the info.

73s,
Vince

Steve,
FYI, I just finished the promotional video that will be shown at Dayton on the
FT- 920 for Yaesu. I've been a ham since 1959 (W6SFG) and kinda do these things as a hobby. I also do work for a number of the other Ham Radio manfactures. My real job is Producing major TV projects like the Titanic Expedition, Arnold Schwarzenegger and other network stuff etc.
I'm personally very impressed with the 920's features, operation and price...street cost around $1600.
Good luck on your decision!

It was also able to be made to do what I said, except it was the 204,
not the
242, that I was thinking of.

> Anyway, if there IS a mod for the 242 MOBILE radio, I also would like the
> information, I would love to be able to talk back to my work on the radio,
> instead of just LISTENING to them. (Flames cheerfully ignored on this
> subject.)

It is still illegal even if you are the licensee for both bands.

Reason: Although a ham needs no type acceptance to convert a radio for a
non-ham
band to a ham band he may use, type acceptance IS required for any rig
used on a
non-ham band.

This I know, having been the station licensee in 4 different radio
services and a
1st Class RTL course,(which I completed, but was too young & too broke
to become

a full 1st Class RTL'ee), and am now studying for my own SW broadcasting license,
which is the only other radio service in the US that type acceptance on the rigs,
(it must only pass a specs inspection, according to Uncle Spam... er I mean Sam).

I find that I am no longer using my Icom W2a Radio. It is in excellent condition, and comes with the following:

1 The W2a Radio
2 The BP-84 (Standard issue Battery Pack) Charged maybe 3 or 4 times.
3 The Periphex 12 Volt Battery
4 The Icom FA-1443B Dual Band Rubber Duck Antenna
5 The Diamond RH77B Dual Band Rubber Duck Antenna (Longer Antenna)
6 The Icom BC-80 Desktop Rapid Smart Charger with Wall Wart (AC Power Supply)
7 The Icom BC-77A (Standard Issue) Battery Charger
8 The Manual and Boxs
9 A Shoulder/Chest Holster

All this and I am only asking $350.00 or best offer plus shipping costs.

> I am considering erecting a G5RV using trees.
> 1. What impedance cable should I use to connect the S0239 on the ribbon
> feeder of the G5RV to my proposed rig (Yaesu FT 101ZD Mk.3) via an
A.T.U.?

Use ordinary 50 ohm cable, with *no* matching device. RG-8X is a good all-around choice, or RG-58 will work fine. An ATU is probably a must. The G5RV is very reactive on most bands, with SWRs of 6:1 or more. You FT-101 is not especially sensitive to high SWR, because of its vacuum tube (sorry... 'valve' :-) finals. Still, you'll be a lot happier with an ATU than without one.

> 2. Will the presence of the tree lower the electrical field of the
antenna
> as I believe a high field will develop at the apex and if so, what can I
> do about it?

Yes. Nothing. Just string it up, load it up, and go. The flatter you can make the flat-top portion, the better it will work.

I've been using a G5RV for years, and I'm very happy with it. I've worked 150 countries in 100 watts with it, and have no plans to replace it. Cheers...

I'm running Mac OS on PPC now, but am thinking about adding extra hard drive and install MkLinux for Mac.

Get this- local bookstore sells 7 CD set of MkLinux including gigabytes of extra stuff for $50.

On that basis alone, it may be hard to resist.

One big factor is that I am using Microsim 7.1 CAD suite and have come up against limits on eval version for designing variable BW constant CF crystal filters.

I have MacSpice, but has no nice GUI or schematic capture. The last time I used Spice on Unix was at Berkeley Evans hall basement using punch cards :) Does it now have nice GUI like Microsim??

Rob.

We're clearing out the garage!

This garage, however, contains an extensive stockpile of NOS and used vacuum tubes which has been growing since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Thanks for your interest!

3413. FT-8000R Experience

Newsgroup: rec.radio.amateur.equipment

Source record: 175423

For anyone who's interested, here's my experience with my new Yaesu FT-8000R. In short, it's great!

Ordered it and FTS-22 CTCSS decode module on Saturday, May 3 from HRO, Delaware. HRO's price, BTW, was between $30 and $100 less than anyone else. CTCSS module arrived Wednesday the 7th, the rig arrived a day later. CTCSS module was a snap to install, except the instructions did not mention the plastic insulator you must stick on to prevent the module connector pins from shorting the surface mount chips below.

Spent most of Thursday evening not doing my chores and playing with the radio instead. :) Easy to program and blindingly fast scanning.

Installed rig on Saturday. The included power cable was plenty long enough to reach the battery (well, in my VW at least). Rig fits like a glove in the center console, but still has plenty of room behind for air circulation.

Signal reports are great, especially the "clear, natural sounding audio." Intermod rejection is also excellent, even driving within 100 yds. of a triplet of paging towers on my way to and from work every day. No ignition noise, no alternator whine, good clean receive audio, and none of the "slow-squelch" problems mentioned here earlier. Cooling fan is audible but not obtrusive. The S-meter squelch is neat, too.

About the only thing I miss that my FT-530 has that the 8000R doesn't is CTCSS decode scanning and direct frequency entry---I have to twiddle the knob to find an unknown tone or enter a new freq.

The user manual mentions that mods for transmitting in other services are in the service manual, which I did not buy. Then again, I have no interest in transimitting out of band or listening to cell phones, either, although x-mit on 220 band would be fun.

Anyone who's looking for a compact, reasonably priced, extended receive dual band rig would do well to consider this one. Great radio!

There is no audio gain on the IC-229, there is a modulation control, I think it is R29, but BE CAREFUL!!! before adjusting this pot, check the audio level of a DTMF tone. Most of the time, the mic's that came with the 229 are not very voice responsive, and require a small mod to get good audio.

If you turn the modulation pot too far, you will damage the driver!!!!!!! (this get very expensive... I know). If the audio level of a DTMF tone is correct, open the mic case and look at the rear of the electret element. There is a zener diode soldered across the terminals. The factory value of this diode is 4.7V, but they fail often. Measure the voltage across this diode (with the key down) and check it. If the voltage is between 4 and 6 volts, but the audio level is not satisfactory, replace this diode with a 9.1V zener. This usually solves the problem.

Hope it helps,

Ron, N7TAW

This is indeed a very touchy subject. What does someone do in the case of a gift? Should the salesman ask to see a copy of the son's license? Should the father be required to at least sign something stating that his son is a licensed Ham? Is it enough that the father knows "My son just passed his General License yesterday, and is now studying for his Advanced?" (after all, how many "illegals" know what "General" and "Advanced" are?) I don't know. My point is this: A lot of people invest a lot of time and energy in all aspects of Ham Radio. And it would be a shame if we didn't at least try something. Ideally, Ham transmitters should only be sold to someone with a valid license, the way drugs are only sold to someone with a valid prescription. (I can get medicine for my wife, but I do need her valid presription.).

In my opinion, this is the best solution: The ARRL push for two pieces of FCC legislation:

1) Only licensed Hams can sell Ham Radio transmitters. Along with a penalty to any individual or business who violates this. (It's a lot easier to fine a business or individual, than it is to stop an illegal from broadcasting).

2) All licensed Hams must see a valid Ham license before selling any Ham Transmitter to anyone. (This might be redundant. All Hams I know would ask to see a valid license, anyway).

What about out-of-state sales using credit card?
According to 2), buyer would have to FAX or mail a photocopy of his valid license.

What about selling used equipment over the internet?
Same answer.

73,
Jimmy

If you are going to use an antenna tuner anyway, use a balanced output tuner and run the twinlead all the way from the antenna to th=
e tuner without using the coax.
There should be less loss in the direct length of twinlead as opposed to the minimum 60 ft. of coax used in the standard G5RV. This =
is also better mechanically since the SO-239/twinlead connection is prone to breaking.

Oh yes! The HTX 202 is a WONDERFUL radio - I espeically love the
"feature" that causes it to key up and transmit an anoying buzzing
noise when the battery dies! - How can anyone promote a radio that
is known to perform such illegal operations (unidentified
transmissions)?

3429. Best coax for HF opinion...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <3379EC7C.ABE@vbe.com>
Source record: 175481

After a discussion among other hams I thought I'd post a question to start a discussion of the "best" coax for HF operation.

The opinion should be based on cost, ease of use, signal loss, etc...

The situation involves a run of no more than 100 feet, HF operation only up to full legal power, possible bury but not necessary.

examples: RG8, RG58, RG213, 9913 etc....

Thanks in advance for your opinions.

Best is relative to your goals, I imagine:-) For the conditions you specified, I would use RG-213 as being the best compromise between cost and loss. Avoid the foam dielectric coaxes unless you intend to be fanatical about sealing the connectors to avoid moisture penetration. The very low loss Belden 9913 is overkill for HF, less than 100 feet, and is very susceptable to water penetration. Good stuff on 432, not needed on 20 Meters.

I feed my 80 meter inverted L with RG-8X from Radio Shack. I had a roll handy and the ground losses swamp the cable losses, so I used it. If I had a roll of RG-213 from a good manufacturer (Belden comes to mind), I would have used it. At the end of the day, you won't be able to tell the difference on HF between -8X and -213. Pick one that will last in your installation, meaning UV resistant jacket, non-migrating, and use quality connectors.

As a one-time motor/transformer.coil rewinder for pay, let me ask you,
is the original lwire still on the solenoid you are to rewind?

If so, you might be well served to do what we used to if we had not
the original specs: We counted turns. Put it on a spindle with a
counter attached, and start pulling the wire off. Not too fast, since

if the wire is burned or breaks, you don't want the monentum to give
you a false reading.

The wire size and the turns count will give you an exact report.

However, if you take the outer diameter of the solenoid, the O.D. of
the spool, the size of the wire, and the thickness of the insulating
paper (if any), then you can use 8th-grade schol math to see the
number of turns.

That will put you well in the ball park.

Correct Resistance will follow as the day follows the day before.

My son is a farmer and recently acquired one Motorola GP300 and and one HT 600 model.

Can these units be modified for non-commerical personal (non-ham use) without interfering with commerical folks?
What FCC licenses if any will he be reqired to obtain to use them legally?

I posed theese basic questions to FCC 4-6 weeks ago and received no response.

Tnx,

john (N7RVW)

3437. Defense Electronics TR-711 plug-ins?

Message-ID: <189911@nos.ea4rct.ampr.org>
Source record: 175490

Hello om's

I've got a problem with the TM-255e Kenwood all-mode VHF transceiver, and
It is a full saturation of the receiver when I transmit in all HF bands,
also with very low powers.
Both antennas are separately about 10 meters, and the feed lines are
coaxials.

This is a great problem when you want to work some satellites modes.

I have solved the problem added a previous amplifier, but the QRM
inserted by this element in a big city like Madrid is no good.

If someone have the same problem or know something to solve it better, pse
tell me.

Thanks for read it.

Someone asked for a place to find present and past Solar Flux Indices,
and the A and K Indices.
Paul WN6K sent me the following information:

For Solar flux summaries by calendar quarter --1994 to 1997 -- Go to:
ftp://proton.sec.noaa.gov/pub/indices/old_indices/

For Current Months Solar data - Go to:
ftp://proton.sec.noaa.gov/pub/indices/
See -- quar_DGD.txt quar_DPD.txt quar_DSD.txt

There is a Mail List for Solar Data which gives 27 day outlook
forecasts, current HF Propagation Reports Data much more:
<<< subscribe/unsubscribe requests to prop-request@digimark.net >>>

Paul WN6K maintains Solar Graphs at URL:
http://idt.net/~wngk19/

This information will be added to the AC6V Ham and DX Reference Guide
under Propagation -- see URL's
below.

3440. FT-2500M vs TM-261A vs IC-2000?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: mtippin@swbell.net
Message-ID: <337a0098.8341424@news.alterdial.uu.net>
Source record: 175492

I'm looking to buy my first "real" 2M mobile rig - my current one is an old Icom IC-25H which works great but has very limited capabilities (5 memories, no CTCSS tone, etc.) - I've narrowed my choices to these three models and would like to solicit opinions (good and bad) on each:

Yeasu FT2500M
Icom IC-2000
Kenwood TM-261A

Budget constraints require that I stay under $325 so some of the more capable and exotic models are out of reach. I've read the literature on each of these and they seem pretty fairly matched, the main differences being the number of memories available.

Of these three, which one would you consider to be the "best" for general mobile and/or base station operation for repeaters and occasionally packet radio?

73,

-Marty Tippin KC0AKA

Yes, indeedie. And since the authorization for those of us on the team to use those frequencies happens to be tied directly and exclusively to the activation of a SAR mission there's quite a grey area for us --- if I'm only authorized to use the frequency during an emergency, and all I have is a non-type accepted rig, isn't the issue of illegal/legal transmission somewhat muddled?

A question: Do you consider your response a "flame" or an intelligent explanation? I consider it the latter, and therefore exactly what I would hope my question would get, as opposed to a quick, nasty, somewhat uncalled for snipe as I've seen others offer.

There's flames and there's "you can't do that because..." I feel that there should be a bit more of the latter and a touch less of the former here. Of course, with folks running around asking "How can I modify my radio so I can say hi to cops as I pass them?" I suppose I'm asking a bit much to suggest that responders assume a functioning neuron or two on the part of the questioner.

Sounds like the filter caps are not doing there job, they maybe leaky or open, Also check the noload current on the primary on the tramsformer with the secondary open. You might have a bad transformer. AS for the switch, live with it or by a new one for RS.

Both Radios havew some unique features so it is a hard decision.
The Yaesu has "Dual Out of Band Watch" and the Icom has only duel watch
inside the same band. The Icom has the famous spectrum scope. etc
It is tough. I may wait till QST Magazine does a review of the radio.

I recently acquired the mike but it doesn't work well with my rig due to its (supposedly) high impedence. I need to know the impedence of the mike so I can get a transformer to match it to my 600ohm mike input on my rig (Tempo One SSB).

3453. Kenwood TM-V7E vs Icom IC-207H

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: gerhard@ats.xs4all.nl
Message-ID: <5ldacm$da0@ats.xs4all.nl>
Source record: 175505

Hi amateurs,

I'm doubing between buying a Kenwood TM-V7E or a Icom IC-207H.

How does 9600 bps perform ?

Which one has the best performance ?

Any good/bad things ?

73,

Gerhard (PE1RLZ)

3454. Re: 9600 bps with IC-207H?

poseidon@ziplink.net (Benedict P. Barszcz) writes:
>Hi everybody,
>does anyone know how well icom-207h performs at 9600 bps packet radio?

>So many manufacturers announce that their radios are "9600 ready" but
>life shows that many of them are NOT.

>Does it apply to IC-207H?

I'm also planning to buy one...

How does is perform compared with the Kenwood TM-V7 E/A ?

Is it also possible to do packet on 70cm and normal QSO on 2m at the same
time ?

Thanks in advance,

Gerhard.

(PE1RLZ)

3455. Any info on FRS Alinco DJ-S46T? (Twin to DJ-S41T)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: dvhunt@es.com
Message-ID: <5ld349$7u9@esnews.corp.es.com>
Source record: 175507
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I recently saw an advertisement for the new Alinco DJ-S46T FRS (Family Radio Service) handheld radio. Does anyone have further information on this?!

It appears to be practically identical to the DJ-S41T and the new DJ-S11T, but works on the new FRS band. The ad that I saw said that it hadn't yet been approved by the FCC and didn't include a price. Anyone know when this might be available and how much it might cost?!

Thanks,
Darvell (N7LN)

3456. Electronic Parts

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: Linda Braspenning <linda.braspenning@skynet.be>
Message-ID: <337A9100.2A31@skynet.be>
Source record: 175508

I study Product Development and am developing a device for pilots on ships.
This device will be a combination of a portophone and a data-receiver, both working on the marine VHF-frequencies (150-170 MHz). (Range: 50 km)
I will need 2 antenna's, since the speach-channel must be open on all times and can't be shut down when data (in the form of a telegram) is being received.

To be able to give this device a decent ~ ergonomic acceptable ~ form, I need some info on some electronic parts. I've tried the Internet and 've written to multiple companies, without any result.

Since I'm a real layman on the topic of radio-communication, I also need some answers on basic questions.

First of all: what are basic dimensions (if possible also prize and weight) for transceivers and receivers?

2. Does such a transceiver include a modulator/demodulator (~ receiver - demodulator)

3. How much battery-power is needed?

4. Can I use a fully integrated antenna on this? (I mean integrated within the body of the device, whithout any ducky antenna's sticking out)

Thanks very,very much for all the info you guys out there can give me.

Linda

>badger@vbe.com
At 50 MHz, 100 feet of RG58U (poly) has a loss of 3.1dB, which isn't a big
deal at HF (loss will be lower at lower frequency), but if that worries you
100 feet of RG213U goes down to 1.6 dB which is pretty good, and RG8U
is 1.2dB. I have run an antenna system on about 30-40m of RG58U
which is thin enough to be very conveniently handled, and used
up to 400W PEP with good results. Burying is an excellent idea for
reducing RF fields on the outside of the coax travelling back to the shack
or house. Open-wire feeder is the best as far as loss is concerned, but much
more awkward to install, susceptible to influence of nearby objects, requires
balanced high-Z feed at the input, requires care to avoid loss increases when
rain gets on the spreaders, requires protection against inadvertent contact.

Source record: 175516

I am just getting back active after a 10 year absence. I am looking at the IC-775DSP transceiver and would be interested in any comments, one way or the other. Specifically,

1. What is the difference between serial numbers less than 1900 and over 2000?

2. Anyone know of a good, remotely tuned antenna tuner for a long wire, that can accommodate 200w?

3. Any other comments on Icon, especially vs. the FT-1000D?

Thanks for any comments and opinions.

Message-ID: <337A6C9A.4B56@mnsinc.com>
Source record: 175518

Out of band near-2m repeaters are used in our VA Army MARS emergency and training nets. Access should be made available to neophyte MARS members as well as experienced ones. It would be preferable if the units could be settable to the MARS repeater freqs. Probably, similar public service organizations would benefit if this feature were more generally available. If there's the opportunity in your area, consider radios that can be modified for out of band legitimate usage.
Neil AB4YK.

Source record: 175554

The one I have for sale is the best thing going. Not because I have it for sale, but that is the truth. CSI makes the patch you want because it covers all the things you will run into. The CS-900 is a VOX Simplex patch. But, that doesn't mean it can't work with/on a (duplex) Repeater. See the following.

CSI CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed at base. 90 speed dials, two level safety codes. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with nice base antenna, more height or an amplifier. Ever more range through a repeater. Just tune the rig to a wide coverage repeater (A club could run this patch from a home). Connects to any rig so use it with a LOW COST spare 2m (220 or whatever). Easy volume adjustments and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, YOU are the control operator. Plus, a long list of other professional features. With a cross-banding rig in your car, you can go all over town making AND RECIEVING calls on simplex with your HT on low power 440! Set it to ringout, send DTMF (touch tone) code or use a silent PL tone, sent to your HT. Imaculate $299

So, this is a computer system working as your patch not just a complicated curcuit. The is the deluxe, everything has been thought out kind of patch. It's made into a small box about the size of a mobile rig. I know you will LOVE it.

I also have the following for sale by the way......

$149 - Mother board, INTEL PENTIUM 90 mhz,*PCI* & ISA bus with CPU and fan. Upgrade your computer today. Takes 72 pin memory. (see PCI card below). Like new with intel manual.

$59 - Card - SVGA *PCI* high quality video. **$39** with above motherboad!

$29 - 14.4K fax modem with manuals **$10** with MB & Video card.

Most batteries these days are sealed/maintenance free.

I worked for a UPS company and we used tons of lead acid sealed batteries.
They are quite safe as long as you don't:

Open them up
Overcharge them for a long time, esp. at high current
Short them out

Opening them up means don't put them where they can fall
Regulate your charger, crowbar is nice (make sure to fuse the charging
line!!)
ALWAYS fuse the thing!

I have a couple of BIG auto batteries on a 1200 VA UPS backing up my gas
hot water boiler and a few lights. Good for a couple of days when it's
very cold.

Subject: FS: Icom W2A 2 M / 70 Cm Dualband Handheld +

I find that I am no longer using my Icom W2a Radio. It is in excellent
condition, and comes with the following:

1 The W2a Radio
2 The BP-84 (Standard issue Battery Pack) Charged maybe 3 or 4 times.
3 The Periphex 12 Volt Battery
4 The Icom FA-1443B Dual Band Rubber Duck Antenna
5 The Diamond RH77B Dual Band Rubber Duck Antenna (Longer Antenna)
6 The Icom BC-80 Desktop Rapid Smart Charger with Wall Wart (AC Power
Supply)
7 The Icom BC-77A (Standard Issue) Battery Charger
8 The Manual and Boxs
9 A Shoulder/Chest Holster

All this and I am only asking $350.00 or best offer plus shipping costs.

Subject: Heathkit Repair

Hi,

I have a Heathkit digital frequency counter IM-2410 that does not work any more. The digits light, the decimal point is correct, and the 3.5 Mc. oscillator is running but the unit will not count. I have used the unit for years and I just hate to toss it. (Who or) where could I get it repaired?

Please E-mail any suggestions.

Thanks,

William Lund

Subject: ICOM 756 vs Yasue FT-920

Steve,
FYI, I just finished the promotional video that will be shown at Dayton on the
FT- 920 for Yaesu. I've been a ham since 1959 (W6SFG) and kinda do these things as a hobby. I also do work for a number of the other Ham Radio manfactures. My real job is Producing major TV projects like the Titanic Expedition, Arnold Schwarzenegger and other network stuff etc.
I'm personally very impressed with the 920's features, operation and price...street cost around $1600.
Good luck on your decision!

Subject: Manuals needed: IT-28, DX100B, Super6, Eico 625

Hi! I got carried away at a hamfest by buying some peoples junk to make it my treasure...I need manuals/operating instructions for these things though. Can anyone supply me with a copy? (of course I will pay for copies and shipping).
Here's the list:
Heathkit IT-28 capacitor checker
Heathkit DX100b
Gonset Super 6 BC to HF converter (also need wiring diagram)
Eico Model 625 tube tester

Please email with info...

Subject: Yaesu FT-1000D.. or is it?

Hi Rick:

Im sorry that those that gave you answers, did not post to the
NewsGroup. I have similiar inquiries about the FT1000/d.

It is my understanding that there is a 600 Hertz filter available as
an add-on to the 1000/d. Im not clear if a second 250Hertz at the 3rd
I.F. is included in the 1000/d.

I have this thread marked to watch with Free Agent, but I think I have
missed the info.

73s,
Vince

The best thing to do is buy a JBI universal radio interface kit.
The JBI kit is reviewed in Dec 96 issue of 73 magazine. I bought
two just as the author of article did and they work great.
There are 3 articles in QST magazine relating to computer interfaces
all good reading. July 92 "A Low-Cost PC Interface for ICOM Radios"
Feb 93 "Everything You Always Wanted to Know about Hardware for
Computer-Controlling Modern Radios" and Sept 91 "An Inexpensive
Computer/Radio Interface". Hope this helps. 73, George K5GH

3485. Yaesu Mobile Dual Banders

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-14 00:00:00 UTC
From: asimonin@murdrum.nmsu.edu
Message-ID: <5lb0rn$s1u@bubba.NMSU.Edu>
Source record: 175568

I am interested in comments about the various 2M/70CM Yaesu dual banders. Recently, someone in this news group seemed to have receiver ignition noise problems with the FT-8500 series when used in their Toyota truck. I have a Nissan which has noise problems on the standard AM band so this ignition noise issue could affect my mobile use. I have a FT-51R which picks us some noise when used in the Nissan. What are the differences between the FT-5200 series and FT-8500 radios? Comments are appreciated!

Thanks....

> my fault.

I believe what you are refering to is an electro-optical device called a "Bragg Cell" which uses a principal in physics called the bragg angle (refering to refraction in a crystal lattice structure). One use of a brag cell is to deflect a laser beam at different angles depending on the frequency of an audio voltage applied across the cell. They are not an everyday item, unless you work with research lasers.

Hope this helps a little.

3492. Re: spc anc-4 noise canx

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-15 00:00:00 UTC
From: nuview@mindspring.com
Message-ID: <337c96ba.2018500@news.mindspring.com>
Source record: 175325

Have had a ANC 4 now for two years....works extremely well, the secret
is to put a good receiving ant on it so the ANC4 will receive the
noise on the same or at the same level as the HF receiver, then its
easy to move it(noise) out of phase and cancel the interfering
signal!!! I use a 6' diamond hung off the tower about 40' up!!!! Have
canceled noise signals as high as 10 over 9 down to 0!!!
Good Luck
Bill

3493. Kam v8.0e Firmware and Front Panel?

Kam v8.0e Firmware and Front Panel?

I'm Spring Cleaning and undergoing other major shack changes.
As a result, I recently purchased a used Kantronics KAM all mode:
S/N 11K01-02340

Looks like a very nice unit, but the previous owner drilled a
small hole in the *front panel* for a reset switch and it has
the version 7 firmware (on a daughter card inside).

Anyway 4 questions:
1) Have info below, but is there an 800 number?
2) Where can I get the ver 8.0e firmware to upgrade?
3) Where can I get a new front panel?
4) I guess the daughter card makes it a Kam+ ?

From: josh <jlgo@best.com>
Message-ID: <337AB82A.39DF@best.com>
Source record: 175328

Hello, the following is available for sale or trade. It is 'commercial' but with some skill, most is definitely HAM Adaptable.

** All Equipment is in Good condition,working & recently pulled from service.

($175) 1- GE VOTER w/ 4 CARDS & AUDIO & POWER CARDS.

($300) 1- RCA '500 SERIES' continuos duty Commercial 75w REPEATER on 464/469.575 w/ PL REEDs of 5B (Motorola TYpe), complete in short Rack Cabinet w/ Doors, Channel Elements & Service/User Manuals- New Channel Elements available from ICM at $41.25 each, may need a tune-up but at last check it worked excellently.

($120) 1- GE Master II UHF Mobile w/ Control Head,Cable & 12 Channel Elements (460Mhz Range), just waiting to be turned nto a Repeater, I will include repeater mods I have .

($50 for both) 2- DATA SIGNAL,INC. CW-ID 70 Morse Code Station/Repeater Identifiers, w/ Service manual, programmable via Eprom (tricky but definitely do-able) , tested & working.

($100 for both) 2- ICOM U12 12 channel UHF 460-470 Mhz 4W Portable Handheld's UHF w/ Nicads. & antennas (they work & look good, but the batteries need rebuiling, which is easily done.).These are Sytnthesized, and programmable via Diode Matrix, I don't know if these can be brought down to 440, but they are definitelky an experimenters delight.

($190) 1- Motorola MTX8000 B3 800Mhz Portable w/ Std. Chgr & 2 Batteries.

($45) 1- Connect Systems (CSI) Model CS-950 Simplex Interconnect.
****

Prefer to sell all as Package (*Make Offer*), or individually as marked...

Equipment I am looking for (for trading or maybe buying):

IBM Laptop (i.e. 701C, or similair small Notebook type)
OptoElectronics Equipment.
Misc. RF/Test/Bench Equipment.
Good quality Scanning Recievers (Icom,AOR,Etc... Prefer Base)
2M or 440 (Or Dual Banders) Base.
Other Amateur Equipment in Base or mobile Configurations.
Base Antenna
2M or 440 Duplexor.

I am in Northern California (San Jose/ Fremont Area) & prefer locals to avoid shipping hassles, but if you'd like I will ship for additional shipping costs.

If you are interested feel free to Email me at jlgo@best.com

Message-ID: <337B5651.14E2@jytol.fi>
Source record: 175332

I'm about to purchase a new rig and I would like to get some comments about these three rigs FT-736, TS-790 and IC-821. I have working experiments only of ft-736 and it was on a terrestial contest. I have no kind of experiments of satellite working so if you would so kind and reply to me on this newsgroup. The rigs are about the same price so that makes no difference between them. I'm about to use rig mostly on tropo, ES and aurora working, maybe in the future via satellite, that should also be considered.

I know of a guy named Fred Burt of Tunho Electronics in skillman N.J. who may be able to help you. I do not have the number handy so try information. DEI had some relatives in the telemetry business all located in and around Silver Spring Md. Vitro Electronics was one of them, and Nems Clark also. Nems Clark was bought by Potomac Instrument who is still in business. I think some years ago I saw modules listed in the Tucker Electronics catalog. Best luck KD3SH

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226.

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

> I'm looking to buy my first "real" 2M mobile rig
>
> Yeasu FT2500M
> Icom IC-2000
> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I can tell you that the Yaesu FT2500M is a superb radio. Lots of nice features, plenty of power, very rugged, and the best intermod rejection of any rig I've ever used. Works very well base, mobile or packet. Just one ham's opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

Mike, N4PDY

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

Source record: 175447

I am close to getting my General, and am looking at used HF equipment
for my first station. I have a few questions I need answered from the
'old time Hams' in radio. How would you answer/recommend the following:
. Digital or analog radio?
. What is the oldest (19XX) rig I should look at for purchase?
. What features should I look for in a quality HF radio?
. What should (if any) I avoid? Brand/features/age?
. Are repair parts avaiable to fix older used tube radios?

I am looking at all the gear, and am confused on where to put my money
the first time out on HF. I have a G5RV outside now, and am excited about
my pending upgrade to get on the HF bands. I have been listening for
about 2 years to you folks talking and working DX. I have a borrowed
Collins 73 S line here but have to return it soon.

Thanks for your time/73

From: dvhunt@es.com (Darvell D. Hunt)
Subject: Any info on FRS Alinco DJ-S46T? (Twin to DJ-S41T)

I recently saw an advertisement for the new Alinco DJ-S46T FRS
(Family Radio Service) handheld radio. Does anyone have further
information on this?!

It appears to be practically identical to the DJ-S41T and the
new DJ-S11T, but works on the new FRS band. The ad that I saw
said that it hadn't yet been approved by the FCC and didn't
include a price. Anyone know when this might be available and
how much it might cost?!

Thanks,
Darvell (N7LN)

Joe:
This is normal for a neon lamp, it will go out
eventually, but it won't effect the operation of the
power supply.

From: Michael Melland <badger@vbe.com>
Subject: Best coax for HF opinion...

After a discussion among other hams I thought I'd post a question to
start a discussion of the "best" coax for HF operation.

The opinion should be based on cost, ease of use, signal loss, etc...

The situation involves a run of no more than 100 feet, HF operation only
up to full legal power, possible bury but not necessary.

examples: RG8, RG58, RG213, 9913 etc....

Thanks in advance for your opinions.

Best is relative to your goals, I imagine:-) For the conditions you specified, I would use RG-213 as being the best compromise between cost and loss. Avoid the foam dielectric coaxes unless you intend to be fanatical about sealing the connectors to avoid moisture penetration. The very low loss Belden 9913 is overkill for HF, less than 100 feet, and is very susceptable to water penetration. Good stuff on 432, not needed on 20 Meters.

I feed my 80 meter inverted L with RG-8X from Radio Shack. I had a roll handy and the ground losses swamp the cable losses, so I used it. If I had a roll of RG-213 from a good manufacturer (Belden comes to mind), I would have used it. At the end of the day, you won't be able to tell the difference on HF between -8X and -213. Pick one that will last in your installation, meaning UV resistant jacket, non-migrating, and use quality connectors.

At 50 MHz, 100 feet of RG58U (poly) has a loss of 3.1dB, which isn't a big
deal at HF (loss will be lower at lower frequency), but if that worries you
100 feet of RG213U goes down to 1.6 dB which is pretty good, and RG8U
is 1.2dB. I have run an antenna system on about 30-40m of RG58U
which is thin enough to be very conveniently handled, and used
up to 400W PEP with good results. Burying is an excellent idea for
reducing RF fields on the outside of the coax travelling back to the shack
or house. Open-wire feeder is the best as far as loss is concerned, but much
more awkward to install, susceptible to influence of nearby objects, requires
balanced high-Z feed at the input, requires care to avoid loss increases when
rain gets on the spreaders, requires protection against inadvertent contact.

Yes that is true, but that is the only problem with it and frankly,
not very seriouse. Then there is hardly another one with everything
build in (DTMF code/decode, CTCSS code/decode) and you cannot beat the
price. I have got 2 HTX-202 three years ago and they never let me down
so far. Very reliable and useful for every environment. It gives you
over 10 watts output with external power supply (13.8 V) and is
excellent for mobile and stationary operation as well.

Oh yes! The HTX 202 is a WONDERFUL radio - I espeically love the
"feature" that causes it to key up and transmit an anoying buzzing
noise when the battery dies! - How can anyone promote a radio that
is known to perform such illegal operations (unidentified
transmissions)?

RedHat is pathetically easy to set up; however, I would not advocate
dumping a perfectly good Slackware distribution to run the RedHat.
Slackware's rc files, bootup scripts, and config files are much better
kept than RedHat's, which, in my opinion, are needlessly scattered
into too many subdirectories.

Source record: 175460

A friend of mine (a brand new ham) inherited an HTX-202 with no manual from a relative. I am trying to help him figure out some of the functions. Does this thing have CTCSS Encode? If it does, I can't find out how to set the tone freq. Apparently, it has PL Decode, because I see where you can turn on/off the Tone Squelch. On my HT (obviously, not a Radio Shack) Tone Squelch indicates PL Decode is active. On the HTX-202, I don't see where you turn on The PL Encode function nor do see where to select the tone to be used. Is there a menu system? How do you get into it??

3536. HTX-202 won't transmit

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-15 00:00:00 UTC
From: teacherjh@aol.com
Message-ID: <19970515192200.PAA05428@ladder02.news.aol.com>
Source record: 175464

I have an HTX-202 and it has developed a problem where it won't transmit. (Yes, transmit is enabled. :) I push the PTT button, and the display changes appropriately for transmitting, but nothing comes out the antenna, and the "power bars" on the display don't light. The problem has been intermittant, but has gotten worse. When I open it up, nose around, and close it up again, sometimes it works.. sometimes not. Suspecting a cold solder joint at the power transistor, I resoldered those, but the problem remains.

Any other ideas as to what to look for? I don't want to have to send it back to RS (though I think if I do I'll get their ESP, as they even pay for breakage due to accident or abuse).

3537. Re: Kenwood TM-V7E vs Icom IC-207H

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-15 00:00:00 UTC
From: dgsholar@gte.net
Message-ID: <5leqof$1gu$1@news10.gte.net>
Source record: 175465

One of the major differences is the Kenwood is a true DUAL BANDER and the Icom is either/or. It only displays one band at a time, and I believe it can only operate i.e. receive one band at a time.

The Kenwood can Cross Band Repeat and it can operate VHF UHF UHF UHF or VHF VHF.

I had the same questions, but went with the Kenwood because of the true Dual Band capability.

OH - I'm not sure if a V7E can Cross Band Repeat, I know the V7A can, it's USA model.

Source record: 175466

To activate ctcss, I think you have to choose the frequency that you have in memory, then hold down the Function button and press M-Set. Press # (SC up) until the letters tc are on the left. Off is probably displayed on the right. Rotate the tuning knob until you get to the tone you want.

3540. Help with Kenwood TS-830S fuse ??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-15 00:00:00 UTC
From: Michael Melland <badger@vbe.com>
Message-ID: <337B6EB0.3BEE@vbe.com>
Source record: 175468

I need to know the proper fuse to replace in the Kenwood TS-830S. The service manual lists a Kenwood part number (F05-6021-05)and simply "Fuse 6 amp". Would that be slow blow/fast blow/medium blow and 125V or 250 V ... AGC or what - Does it really matter ??? East Coast Parts won't tell or doesn't know the actual fuse and they want $1.14 for the replacement Kenwood part numbered fuse and $6.00 to ship it <egad!> The fuse inside was improper one (8 amp)so I have nothing to compare to.

From: jw@alpha1.csd.uwm.edu
Message-ID: <5lfu95$21t@uwm.edu>
Source record: 175469

Ok all you old timers:

I picked up an Ameco TX-62 transmitter for 6 and 2 meters along
with the matching VF0-621 (only $5.00! for both). The thing does
xmit on 6 meters but I am not able to 'key' it...it's keyed all the
time, makes no diff. if I plug in my straight key or not.
I do get a full 10 watts out though and I'm a good S9 across town too. Ideas?

The guy didn't have any manuals or info on it. He was just happy to
get rid of it. Heck for $5.00, I can at least burn a couple of hours
playing with it...such a deal! Plus I already made one contact with
it!

Any takers?

3550. Astron RS-20M Be Dead..Hep Me!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-16 00:00:00 UTC
From: Doug@E_Fresh.net
Message-ID: <Doug-1605970151480001@ags-r1-p15.groupz.net>
Source record: 175341

I have an Astron RS-20M supply that stopped working. It has been in continuous service for 14 months at my repeater site.

One day the supply stopped working. The only visible symptom was a blown 5A fuse. The repeater was fine (indicating no catastrophic line surge had occured to both) as a backup power supply I put in line returned it to service. I have PolyPhaser line & coaxial surge protection installed.

When I got the P/S home, I did not see any visual signs of a major failure. No smoke trails, etc. Each time I installed a new fuse (with the supply both loaded and unloaded) and powered up, the fuses blew.

I looked inside with a multimeter while referencing the schematic and did not readily see anything that had failed to ground. All internal connections are good and there does not seem to be anything irregular with the PC board.

I replaced the voltage regulater IC on the PC board, but no dice. What could be failed? What kind of systemtic approach would anyone recommend (short of desoldering diodes, power transistors, etc.) to pinpoint the problem?

I have seen this same model (but not this same supply) go into the crobar state due to RF interference. The RS-20 would be energized, but there was only 2-3v DC output at the terminals. The problem would clear up when the power switch was cycled off and then back on. The fix for that was to replace three caps on the board with ones of different values. So, I would have to rule out any RF interference on this one.

Anyone have any helpful suggestions?

3551. DC connectors for ICOM radio

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-16 00:00:00 UTC
From: toms@inconnect.inconnect.com
Message-ID: <5lgvueqt1@news.inconnect.com>
Source record: 175342

I just received the connectors I ordered from the ad in the back of QST. These are the connectors for most Yaesu, Kenwood, and ICOM radios. The connectors fit just fine, but they do not stay put. The standard connector that ICOM supplied has a narrow tab on top with a piece of plastic going down and in at a 45 degree angle. The ones I received from R. Langston have a flat tab with no angled plastic. A slight pull on the cable and it will pop out. Has anyone delt with this problem. I guess it was too good to be true to think that I would not have to buy the connectors from ICOM for their outrageous prices. If I cannot find a solution, I will simply call the supplier and arrange to send them back.

From: mtippin@swbell.net (Marty Tippin)
Subject: FT-2500M vs TM-261A vs IC-2000?

I'm looking to buy my first "real" 2M mobile rig - my current one is an old Icom IC-25H which works great but has very limited capabilities (5 memories, no CTCSS tone, etc.) - I've narrowed my choices to these three models and would like to solicit opinions (good and bad) on each:

Yeasu FT2500M
Icom IC-2000
Kenwood TM-261A

Budget constraints require that I stay under $325 so some of the more capable and exotic models are out of reach. I've read the literature on each of these and they seem pretty fairly matched, the main differences being the number of memories available.

Of these three, which one would you consider to be the "best" for general mobile and/or base station operation for repeaters and occasionally packet radio?

I don't know if these problems are related, but, I couldn't use my Radio Shack speaker/mic with the FT-50 and audio adapter plug on VHF or UHF. RF was getting back into the radio (via the sp/mic cable), causing severe audio distortion -and- causing the radio to stay in the transmit mode after release of the PTT. I soldered 0.0047uF bypass capacitors on the mic/PTT audio lead and speaker lead to ground inside the audio adapter plug. That cured the problem. (Hint: I used SMD's, but you might be able to cram radial leaded ceramic caps. in there). Maybe the bypass would have been better done -inside- the radio, but I'm not -that- brave!

From: Dave Keyser <nospam.david.keyser@ln.ssw.abbott.com>
Subject: FT-8000R Experience

For anyone who's interested, here's my experience with my new Yaesu FT-8000R. In short, it's great!

Ordered it and FTS-22 CTCSS decode module on Saturday, May 3 from HRO, Delaware. HRO's price, BTW, was between $30 and $100 less than anyone else. CTCSS module arrived Wednesday the 7th, the rig arrived a day later. CTCSS module was a snap to install, except the instructions did not mention the plastic insulator you must stick on to prevent the module connector pins from shorting the surface mount chips below.

Spent most of Thursday evening not doing my chores and playing with the radio instead. :) Easy to program and blindingly fast scanning.

Installed rig on Saturday. The included power cable was plenty long enough to reach the battery (well, in my VW at least). Rig fits like a glove in the center console, but still has plenty of room behind for air circulation.

Signal reports are great, especially the "clear, natural sounding audio." Intermod rejection is also excellent, even driving within 100 yds. of a triplet of paging towers on my way to and from work every day. No ignition noise, no alternator whine, good clean receive audio, and none of the "slow-squelch" problems mentioned here earlier. Cooling fan is audible but not obtrusive. The S-meter squelch is neat, too.

About the only thing I miss that my FT-530 has that the 8000R doesn't is CTCSS decode scanning and direct frequency entry---I have to twiddle the knob to find an unknown tone or enter a new freq.

The user manual mentions that mods for transmitting in other services are in the service manual, which I did not buy. Then again, I have no interest in transimitting out of band or listening to cell phones, either, although x-mit on 220 band would be fun.

Anyone who's looking for a compact, reasonably priced, extended receive dual band rig would do well to consider this one. Great radio!

Subject: HTX-202 CTCSS??

A friend of mine (a brand new ham) inherited an HTX-202 with no manual
from a relative. I am trying to help him figure out some of the
functions. Does this thing have CTCSS Encode? If it does, I can't find
out how to set the tone freq. Apparently, it has PL Decode, because
I see where you can turn on/off the Tone Squelch. On my HT
(obviously, not a Radio Shack) Tone Squelch indicates PL Decode is
active. On the HTX-202, I don't see where you turn on The PL Encode
function nor do see where to select the tone to be used. Is there a
menu system? How do you get into it??

Tnx es 73 de Ron/N3ZDS

From: jlmott@aol.com (JLMott)
Subject: HTX-202 CTCSS??

To activate ctcss, I think you have to choose the frequency that you have
in memory, then hold down the Function button and press M-Set. Press #
(SC up) until the letters tc are on the left. Off is probably displayed
on the right. Rotate the tuning knob until you get to the tone you want.

From: teacherjh@aol.com (Teacherjh)
Subject: HTX-202 won't transmit

I have an HTX-202 and it has developed a problem where it won't transmit. (Yes, transmit is enabled. :) I push the PTT button, and the display changes appropriately for transmitting, but nothing comes out the antenna, and the "power bars" on the display don't light. The problem has been intermittant, but has gotten worse. When I open it up, nose around, and close it up again, sometimes it works.. sometimes not. Suspecting a cold solder joint at the power transistor, I resoldered those, but the problem remains.

Any other ideas as to what to look for? I don't want to have to send it back to RS (though I think if I do I'll get their ESP, as they even pay for breakage due to accident or abuse).

Yes, indeedie. And since the authorization for those of us on the team to use
those frequencies happens to be tied directly and exclusively to the
activation of a SAR mission there's quite a grey area for us --- if I'm only
authorized to use the frequency during an emergency, and all I have is a
non-type accepted rig, isn't the issue of illegal/legal transmission somewhat
muddled?

3557. Spy people on the Net

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-16 00:00:00 UTC
From: benh@hotmail.com
Message-ID: <337b9d3a.5351452@bang-olufsen.dk>
Source record: 175348

I present here my two most recent software which I hope they interest you.
they are progammed by Turbo C++ and run under Windows(3.11 and 95).
here is a short description of these two software.

1-Robot Spy 1.0
at my knowledge, this software is the first and the unique of its kind.
This software allow you to spy your friends who are on the net at the same time
of you, it permits to see exactly what they do on their screen, pixel by pixel,
anywhere, in the world, at the condition they are connected to the internet.
how does-it work?
it's simple, you send a file to the person you want to spy telling to him it's a
game or everythings else, the objectif is this person run the file. from this time,
a batch file is installed on his computor, and everytime this person use internet,
this batch connects him secretly on our server.
on your side, you , after the installation of the other part of the software every time
you want, you can connect on our server with your password and have the list of all the
persons who received your batch and who are connected at this time.
the only thing you have to do is to click on the name of the person you want to spy.
a window opens containing exactly the screen of the person spied, you can have
ten pictures per second with 256 colors, if you switch to balck and white mode you can
onbtain a real time sequence, approximatly 30 pictures by second.

Robot Mailer 1.1
The message you are reading presently is sent to more then 20,000 newsgroups with
this software. This program automates FreeAgent, and reach with a connection of 28,8 Kbauds
5,000 news per hours. It can also find a maximum of 50,000 e-mail adresses from internet
and
send a message in 4 or 5 hours. You can obtain with this sofware the most powerful tool of
mass transmittion on the internet.

Robot Spy 1.0.................20 US$
Robot Mailer 1.1.............20 US$
Both.............................30 US$

I'm sorry i can't accept credit card, but you can send an international money order to:

Ben Hedi Nassef
1481 Ste-Catherine est #7
Montreal, PQ, H2L-2H9
Canada

Don't forget to include your e-mail on a paper, you receice the software ordered in your
e-mail the day we receive the money order.

3558. Help Kenwood TH-215A HT

3560. Wanted: FT-ONE "Local Unit" board

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-16 00:00:00 UTC
From: Terry Crothers <vk8ktc@ozemail.com.au>
Message-ID: <01bc61f5$06bf1880$93f3868b@default>
Source record: 175351

Hello my friends,
I have a problem with my Yaesu FT-ONE. The symptoms are that folks can hear my USB transmissions clear on LSB and poorly on USB.
I have traced the problem to the 24.5Mhz carrier oscillator not being on the correct frequency.
I am unable to adjust it to the specs, even after replacing the Xtal and varactor. Parts for this rig are difficult to source.
I'm now at the end of my patience and would like to purchase from someone, the "Local Unit" board, new or used. The manual indicates it's symbol number as PB-2253 (Early Model)
(The S/N of the FT-ONE is 020019)
Looking forward to any replies.
Terry Crothers (vk8ktc@ozemail.com.au) on Groote Eylandt (OC141)

3561. Heathkit TT-1 tube tester survey

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-16 00:00:00 UTC
From: jeffa@ix.netcom.com
Message-ID: <5lhknm$ec2@sjx-ixn8.ix.netcom.com>
Source record: 175352
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I've finished (I hope) repairing and recalibrating my Heathkit TT-1 according to the manual's instructions. However, while making a seperate transconductance measurement I've found that the TT-1's meter reading is off by (roughly) 30 percent.

I don't know if this inaccuracy is unique to my unit, or if it is common to others. And because, as a kit, each TT-1 is custom, so to speak, there could be quite a bit of variation from unit to unit. I'd like to gather additional information from other users to check on the meter's accuracy, and thus propose the following:

I'll supply a small number of tubes (6, say). These will be my 'reference' tubes, and I'd like to send them to TT-1 owners for measurement on their units. Once the measurements are made, return the tubes to me along with the transconductance reading for each tube. I'll then correlate these readings and publish the results.

I'll try to include return postage with the tubes, but this could become expensive if there is much interest - perhaps the return postage might be handled by the other end (don't forget, this is in the interests of science!)? Or, perhaps we can do this as a "round robin" mailing, with each participant paying the postage to the next person on the list...

Anyone interested?

Thanks,

- Jeff, WA6AHL

I've been using an RS rotator to turn a 4-element, 2-meter Cushcraft beam
for many years now. This beam is a bit smaller and lighter than yours,
but it's mounted to the mast at the very end, so the wind torque may even
be greater than yours. I also used an RS TV rotator for a while to turn
a 20-meter X-beam antenna. It turned the antenna fine, and the only problem
was that it occasionally lost sync between the control box and the antenna
in 45+ mph winds. But the sync is easily re-established.

As you say, they're cheap. And they do work better than some folks might
have you believe.

I guess that's the rumor. I bought AT-600 a couple days ago.

Almost any tranceivers can be modified. How about Yaesu50R ? same
thing. I think we shouldn't focus on AT-600 too much... I am sure
we do because of HTX-204...

> 'old time Hams' in radio
^^^^^^^^

Well, I *certainly* qualify in that department :-)

> . Digital or analog radio?

I guess you're talking about the frequency display. You'll be lots happier
with a digital display.

> . What is the oldest (19XX) rig I should look at for purchase?

Probably around 1985. There are lots of older rigs around, but it gets
harder and harder to find parts for them. May early solid state radios had
custom ICs, which are no longer available. If you get one of those, and the
IC dies, your radio becomes a tasteful but expensive paperweight.

> . What features should I look for in a quality HF radio?

Good filtering, good dynamic range, coverage of "WARC" bands (an issue on
some older radios). Some earlier radios had a limited number of memory
channels; that may be an issue if you care about that sort of thing.
Earlier radios generally lacked a keypad, which allows you to directly
punch in a frequency. Nice to have but you can live without it if you have
to. Also, general coverage receivers are less common in older rigs. Many
recent rigs have digital signal processing of one kind or another; a nice
feature, missing on older rigs.

Some radios have a built-in power supply, others require an external 12
volt supply. This is a good news / bad news situation. An AC rig is nice
in that you don't have to buy a power supply (usually another $150 or so),
but you can't easily use it mobile or portable. The DC rigs are easy to
use portable, but you have to pop for the DC supply.

> Are repair parts avaiable to fix older used tube radios?

It's getting harder and harder to find tubes, and the price is going up.
I'd avoid all-tube rigs if I were you.

> I have a G5RV outside now

Your G5RV will work just fine, but you will need an antenna tuner for
transmitting. Many modern rigs have them built in.

> I have a borrowed Collins 73 S line here but have to return it soon.

The S-Line is legendary, but still highly regarded. However, it lacks many of the modern features, and owners are engaged in a more-or-less endless search for tubes.

It all comes down to how much you want to spend. If you're trying to do this on the cheap, try to find a clean Yaesu FT-101ZD. This was the last of the -101 line, and is a very fine radio. It has tubes in the final power stages, but is mostly solid state, and the tubes are of a common type that's relatively easy to find. The Kenwood TS-830 is also a very nice radio. You should be able to get these in good condition for around $500 or so. If you can go higher, the best deal on a used radio right now is probably the Yaesu FT-990. This rig just went out of production; it was replaced by the FT-920.

The 990 is a fine performer with lots and lots of nice features, including a very effective built-in antenna tuner. There is an AC version with built-in supply, a DC version, and some that have both an AC supply and a DC power input jack; best of both worlds. I have one of those, and I like it a lot. These were recently going for around $1500, but with the 920 just introduced at $1800 new, it seems to me that the price of used 990s will have to edge down a bit. With a little shrewd shopping at hamfests and surfing around the net (try rec.radio.swap), you should be able to find a nice one for $1200 or so. Best of luck, and 73...

Yes its strong enough to handle what you want to put on it. Before I
put up my tower, I had a 45ft pushup with a Cushcraft 13B2 and a
Diamond 200 dualband vertical on one. Worked fine for me for
two years, and is still working fine for the fellow I gave it to.
Note,
It does not have a brake on it, so expect to recalibrate often. That
is accomplished rather easily by turning the array north to south
a couple of times, good luck with it...KS4KO

3567. Looking for manual for Heathkit

From: sba3020@InfoNET.st-johns.nf.ca
Message-ID: <5lhtbk$d8e@coranto.ucs.mun.ca>
Source record: 175360

I have some questions about the Yaesu FT50R.

1) Is the beltclip off the VX-10 better then the regular one and is
it spring loaded?

2) How much for it and where can I get one (belt clip)?

3) Is there any way I can enter blocked out frequencies by the
Yaesu software (freq's between 200 & 300 MHz)? I heard older
versions of the software would.

4) Any other software out for it?

5) Is there a mod to let me use 5kHz steps above 590MHz?

6) Is there or will there be any fix for the Wide FM problem?
I heard of a software fix, is this true?

The pass transistors are probably shorted and each time you power it up the crowbar triggers and blows the fuse (exactly as designed) The short will not show up with an ohm-meter because it is not there until the crowbar triggers. The only 2 things that go wrong with Astron supplies is the regulator (ua723) and the pass transistors (90% of the time).

I absolutely agree with Mike, and anything that probably is going to
go wrong with a 15 year old radio has already been fixed. I like the
TS-830. Very good receiver and tremendous transmit audio. The Kenwood
TS-430 ($500-$550) doesnt have quite as good as a receiver, but is
solid state, general coverage receiver, and in the same price range.
Icom 730 is a good radio also, solid state and quite small.
($400-$450)

Lower price range would include Kenwood TS-520(S,SE), Yaesu FT-101E
Both are tube finals and in $275-$325 range but built like tanks.

I myself am partial to Drake radios (TR-7, C-Line) but they are
getting hard to find.

Don't make yourself crazy trying to decide Charlie, but have fun.

> George
>
> gworth@ibm.net

George:
What is happening is that when you touch any piece
of metal
to any part of the system which has RF current flowing in it you generate
a small arc. This is the scratching you hear in the repeater. The problem
is that you have some piece of metal on the pole that is loose and moving
in the wind. I would suggest climbing the pole with a plastic(not metal)
hammer and start tapping on the various metal mountings with your repeater
keyed. You will soon find the culprit. It could be ANY piece of metal, be
sure
to try them all. Don't add anything to the pole until you find the loose
part.
Also try nudging the pole with your hip to see if you can make it act up.

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection
to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

My first bet would be on a shorted rectifier diode. If it's easy, you
might disconnect everything from the positive lead of the bridge and
see if the fuse still blows; that'd eliminate a bunch of other
possibilities.

If it's not easy, I'd just take an ohmmeter to the diodes.

I'm sorry, sir, but your information is in error. Type acceptance is not
required for radios used on bands controlled by the National
Telecommunications and Information Administration (NTIA). I know this because
in addition to being a ham, having a GROL, etc., I am a user of several
NTIA-controlled bands, where modified ham radio usage is permitted. In fact,
tommorow I'm going to be at Sheboygan, Wisconsin legally transmitting on
non-ham frequencies with a modified Kenwood TH-78A, and my doing so will not
violate any regulations nor violate any laws.

>

I think that your problem might be caused by noise at HF. With VHF FM, your receiver's squelch circuit keeps the DCD in the 3105 chip from falsing, but with HF SSB receivers, there normally isn't any squelch. Also other signals will probably affect DCD. The Baycom modem probably isn't really good enough for the demands of HF operation, although possibly you could modify the circuit to add state-machine DCD, which would help this situation. See www.tapr.org for a simple state-machine DCD kit which could be added to the modem. A TNC designed for HF operation, such as the MFJ 1278 would probably be a better solution, however.

I guess that makes me an urban ledgend. You can often find this Extra
class operator listening and calling CQ around 7.110 to 7.115 and 3.700
to 3.725. I'll see you Novice class operators there, and I hope to see
you in the General, Advanced and Extra portions of the bands soon.

Here's what I did:

The crystal element was bad anyway, so I put a Heil element in its
place. The impedance of the Heil is about 2,000 ohms it it works great
with the solid state rigs.

If the PTT button is plastic then the inner piece is broken. It can be
replaced with a rubber version without taking the radio apart. The
handmike jack has probably broken loose from the PC board and need to be
resoldered or replaced. On the keypad it needs to be disassembled and
cleaned using only alcohol and q-tips. Should takr care of all the
problems..

Couldn't resist the post... My old rig ran with a Dow Key relay off an octal socket plug. Sounds like it may be to obvious to think the relay coil has a dirct path to ground. I used to use a foot switch with mine to trigger the Dow Key.

10 watts sure sounds like a soft final. I used to get 35 out with the VFO-621. By the way... Later versions of the VFO-621 were a beautiful hetrodyne mixed scheme. Really top drawer when it came to stability. I used to run the rig with an attenuator to work thru the OSCAR satelites when the down link was to 10 meters. The final days of my 62 were use as a six meter beacon. The rig was rugged enough to run 24 hours a day on cw.

I have used International Filters for years. Theyt started life out as
Fox -Tango and then International Filter and Computer and now they
have moved to Oregon. They have better shape factor, better ultimate
rejection and are cheaper than Kenwood,Icom or Yaesu filters. Bottom
line is they work better. I just got off the phone and ordered a Drop
in 1ST IF filter for my Drake R4C. They are running a 10% off Dayton
Special by the way.

Sounds like the filter caps are not doing there job, they maybe leaky or open,
Also check the noload current on the primary on the tramsformer with the
secondary open. You might have a bad transformer. AS for the switch, live with
it or by a new one for RS.

From: Linda Braspenning <linda.braspenning@skynet.be>
Subject: Electronic Parts

I study Product Development and am developing a device for pilots on ships.
This device will be a combination of a portophone and a data-receiver, both working on the marine VHF-frequencies (150-170 MHz). (Range: 50 km) I will need 2 antenna's, since the speach-channel must be open on all times and can't be shut down when data (in the form of a telegram) is being received.

To be able to give this device a decent ~ ergonomic acceptable ~ form, I need some info on some electronic parts. I've tried the Internet and 've written to multiple companies, without any result.

Since I'm a real layman on the topic of radio-communication, I also need some answers on basic questions.

First of all: what are basic dimensions (if possible also prize and weight) for transceivers and receivers?

2. Does such a transceiver include a modulator/demodulator (~ receiver - demodulator)

3. How much battery-power is needed?

4. Can I use a fully integrated antenna on this? (I mean integrated within the body of the device, whithout any ducky antenna's sticking out)

Thanks very,very much for all the info you guys out there can give me.

Linda

Subject: FS: Netwave for a Wireless Laptop!

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection
to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

Subject: Help Kenwood TH-215A HT

I'm having trouble with my Kenwood TH-215A HT. I'm trying to determine if it
is worth fixing. If so where!? The PTT switch isn't working. Also for some
reason the external hand mike doesn't work. HOWEVER my headset VOX mike does
work! The other problem I have is that the buttons on the keypad are
sluggish. Sometimes the buttons work, sometimes not and sometimes I get
double presses even though I only pressed once. I have taken the over off to
see what I can do but it doesn't look promising.

Any hints, clues or suggestions would be appreciated.

73, Tom Kenny KB2GLO

Subject: IC-775DSP

I am just getting back active after a 10 year absence. I am looking at
the IC-775DSP transceiver and would be interested in any comments, one
way or the other. Specifically,

1. What is the difference between serial numbers less than 1900 and over
2000?

2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
that can accommodate 200w?

3. Any other comments on Icon, especially vs. the FT-1000D?

Thanks for any comments and opinions.

73,

> TNIC@IDT.NET

I've been using an RS rotator to turn a 4-element, 2-meter Cushcraft beam for many years now. This beam is a bit smaller and lighter than yours, but it's mounted to the mast at the very end, so the wind torque may even be greater than yours. I also used an RS TV rotator for a while to turn a 20-meter X-beam antenna. It turned the antenna fine, and the only problem was that it occasionally lost sync between the control box and the antenna in 45+ mph winds. But the sync is easily re-established.

As you say, they're cheap. And they do work better than some folks might have you believe.

From: jeffa@ix.netcom.com (Jeff Anderson)
Subject: Heathkit TT-1 tube tester survey

I've finished (I hope) repairing and recalibrating my Heathkit TT-1
according to the manual's instructions. However, while making a
seperate transconductance measurement I've found that the TT-1's meter
reading is off by (roughly) 30 percent.

I don't know if this inaccuracy is unique to my unit, or if it is
common to others. And because, as a kit, each TT-1 is custom, so to
speak, there could be quite a bit of variation from unit to unit. I'd
like to gather additional information from other users to check on the
meter's accuracy, and thus propose the following:

I'll supply a small number of tubes (6, say). These will be my
'reference' tubes, and I'd like to send them to TT-1 owners for
measurement on their units. Once the measurements are made, return the
tubes to me along with the transconductance reading for each tube.
I'll then correlate these readings and publish the results.

I'll try to include return postage with the tubes, but this could
become expensive if there is much interest - perhaps the return postage
might be handled by the other end (don't forget, this is in the
interests of science!)? Or, perhaps we can do this as a "round robin"
mailing, with each participant paying the postage to the next person on
the list...

Anyone interested?

Thanks,

- Jeff, WA6AHL

I have used International Filters for years. Theyt started life out as
Fox -Tango and then International Filter and Computer and now they
have moved to Oregon. They have better shape factor, better ultimate
rejection and are cheaper than Kenwood,Icom or Yaesu filters. Bottom
line is they work better. I just got off the phone and ordered a Drop
in 1ST IF filter for my Drake R4C. They are running a 10% off Dayton
Special by the way.

Must be something wrong with yours, Mark. Never heard of any HTX-202
doing what you describe. I have two of these rigs, and they perform
flawlessly.

Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

If you're looking for a Windows 95/WindowsNT program to control your Yaesu FT-990 radio, I've decided to offer my MasterControl 990 as shareware. The features are noted on my MasterControl 990 home page at http://prairie.lakes.com/~medcalf/

You'll need an RS-232 to TTL adapter to talk to the FT-990, and one available COM port on your computer (the program supports COM 1 through COM 9). The shareware registration is only $25.00 and I'll be happy to consider all suggestions for improvements from registered users.

73, Karl - WK5M

I think that your problem might be caused by noise at HF. With VHF FM,
your receiver's squelch circuit keeps the DCD in the 3105 chip from
```

falsing, but with HF SSB receivers, there normally isn't any squelch. Also other signals will probably affect DCD. The Baycom modem probably isn't really good enough for the demands of HF operation, although possibly you could modify the circuit to add state-machine DCD, which would help this situation. See www.tapr.org for a simple state-machine DCD kit which could be added to the modem. A TNC designed for HF operation, such as the MFJ 1278 would probably be a better solution, however.

Bob

Subject: Advice on HF Equipment

I am close to getting my General, and am looking at used HF equipment for my first station. I have a few questions I need answered from the 'old time Hams' in radio. How would you answer/recommend the following:
. Digital or analog radio?
. What is the oldest (19XX) rig I should look at for purchase?
. What features should I look for in a quality HF radio?
. What should (if any) I avoid? Brand/features/age?
. Are repair parts avaiable to fix older used tube radios?

I am looking at all the gear, and am confused on where to put my money the first time out on HF. I have a G5RV outside now, and am excited about my pending upgrade to get on the HF bands. I have been listening for about 2 years to you folks talking and working DX. I have a borrowed Collins 73 S line here but have to return it soon.

Thanks for your time/73

From: Doug@E_Fresh.net (Mr. Doug)
Subject: Astron RS-20M Be Dead..Hep Me!

I have an Astron RS-20M supply that stopped working. It has been in continuous service for 14 months at my repeater site.

One day the supply stopped working. The only visible symptom was a blown 5A fuse. The repeater was fine (indicating no catastrophic line surge had occured to both) as a backup power supply I put in line returned it to service. I have PolyPhaser line & coaxial surge protection installed.

When I got the P/S home, I did not see any visual signs of a major failure. No smoke trails, etc. Each time I installed a new fuse (with the supply both loaded and unloaded) and powered up, the fuses blew.

I looked inside with a multimeter while referencing the schematic and did not readily see anything that had failed to ground. All internal connections are good and there does not seem to be anything irregular with the PC board.

I replaced the voltage regulater IC on the PC board, but no dice. What could be failed? What kind of systemtic approach would anyone recommend (short of desoldering diodes, power transistors, etc.) to pinpoint the problem?

I have seen this same model (but not this same supply) go into the crobar state due to RF interference. The RS-20 would be energized, but there was only 2-3v DC output at the terminals. The problem would clear up when the power switch was cycled off and then back on. The fix for that was to replace three caps on the board with ones of different values. So, I would have to rule out any RF interference on this one.

Anyone have any helpful suggestions?

From: "Terry Crothers" <vk8ktc@ozemail.com.au>
Subject: Wanted: FT-ONE "Local Unit" board

Hello my friends,
I have a problem with my Yaesu FT-ONE. The symptoms are that folks can hear
my USB transmissions clear on LSB and poorly on USB.
I have traced the problem to the 24.5Mhz carrier oscillator not being on
the correct frequency.
I am unable to adjust it to the specs, even after replacing the Xtal and
varactor. Parts for this rig are difficult to source.
I'm now at the end of my patience and would like to purchase from someone,
the "Local Unit" board, new or used. The manual indicates it's symbol
number as PB-2253 (Early Model)
(The S/N of the FT-ONE is 020019)
Looking forward to any replies.
Terry Crothers (vk8ktc@ozemail.com.au) on Groote Eylandt (OC141)

Subject: Advice on HF Equipment

> I am close to getting my General...

Congrats!

>... and am looking at used HF equipment for my first station. I have a
few questions I need answered from the
> 'old time Hams' in radio
^^^^^^^^

Well, I *certainly* qualify in that department :-)

> . Digital or analog radio?

I guess you're talking about the frequency display. You'll be lots happier
with a digital display.

> . What is the oldest (19XX) rig I should look at for purchase?

Probably around 1985. There are lots of older rigs around, but it gets
harder and harder to find parts for them. May early solid state radios had
custom ICs, which are no longer available. If you get one of those, and the
IC dies, your radio becomes a tasteful but expensive paperweight.

> . What features should I look for in a quality HF radio?

Good filtering, good dynamic range, coverage of "WARC" bands (an issue on
some older radios). Some earlier radios had a limited number of memory
channels; that may be an issue if you care about that sort of thing.
Earlier radios generally lacked a keypad, which allows you to directly
punch in a frequency. Nice to have but you can live without it if you have
to. Also, general coverage receivers are less common in older rigs. Many
recent rigs have digital signal processing of one kind or another; a nice
feature, missing on older rigs.

Some radios have a built-in power supply, others require an external 12
volt supply. This is a good news / bad news situation. An AC rig is nice
in that you don't have to buy a power supply (usually another $150 or so),
but you can't easily use it mobile or portable. The DC rigs are easy to
use portable, but you have to pop for the DC supply.

> Are repair parts avaiable to fix older used tube radios?

It's getting harder and harder to find tubes, and the price is going up.
I'd avoid all-tube rigs if I were you.

> I have a G5RV outside now

Your G5RV will work just fine, but you will need an antenna tuner for transmitting. Many modern rigs have them built in.

> I have a borrowed Collins 73 S line here but have to return it soon.

The S-Line is legendary, but still highly regarded. However, it lacks many of the modern features, and owners are engaged in a more-or-less endless search for tubes.

It all comes down to how much you want to spend. If you're trying to do this on the cheap, try to find a clean Yaesu FT-101ZD. This was the last of the -101 line, and is a very fine radio. It has tubes in the final power stages, but is mostly solid state, and the tubes are of a common type that's relatively easy to find. The Kenwood TS-830 is also a very nice radio. You should be able to get these in good condition for around $500 or so. If you can go higher, the best deal on a used radio right now is probably the Yaesu FT-990. This rig just went out of production; it was replaced by the FT-920.

The 990 is a fine performer with lots and lots of nice features, including a very effective built-in antenna tuner. There is an AC version with built-in supply, a DC version, and some that have both an AC supply and a DC power input jack; best of both worlds. I have one of those, and I like it a lot. These were recently going for around $1500, but with the 920 just introduced at $1800 new, it seems to me that the price of used 990s will have to edge down a bit. With a little shrewd shopping at hamfests and surfing around the net (try rec.radio.swap), you should be able to find a nice one for $1200 or so. Best of luck, and 73...

Subject: ALINCO EC10 / LPD radio

I have bought a LPD radio from ALINCO. The name is EC10.
The low power device has 10mW output power.

Let me know, how to change to change the output power from 10mW to 50 or 400mW.
Is the frequency after the change the same?

From: a313@Lehigh.EDU
Subject: Ameco TX-62 - HELP!

Couldn't resist the post... My old rig ran with a Dow Key relay off an octal socket plug. Sounds like it may be to obvious to think the relay coil has a dirct path to ground. I used to use a foot switch with mine to trigger the Dow Key.

10 watts sure sounds like a soft final. I used to get 35 out with the VFO-621.
By the way... Later versions of the VFO-621 were a beautiful hetrodyne mixed
scheme. Really top drawer when it came to stability. I used to run the rig
with an attenuator to work thru the OSCAR satelites when the down link was to
10 meters. The final days of my 62 were use as a six meter beacon. The rig was
rugged enough to run 24 hours a day on cw.

Subject: FT50R beltclip and mods?

I have some questions about the Yaesu FT50R.

1) Is the beltclip off the VX-10 better then the regular one and is
it spring loaded?

2) How much for it and where can I get one (belt clip)?

3) Is there any way I can enter blocked out frequencies by the
Yaesu software (freq's between 200 & 300 MHz)? I heard older
versions of the software would.

4) Any other software out for it?

5) Is there a mod to let me use 5kHz steps above 590MHz?

6) Is there or will there be any fix for the Wide FM problem?
I heard of a software fix, is this true?

>
> gworth@ibm.net

George:
What is happening is that when you touch any piece
of metal
to any part of the system which has RF current flowing in it you generate
a small arc. This is the scratching you hear in the repeater. The problem
is that you have some piece of metal on the pole that is loose and moving
in the wind. I would suggest climbing the pole with a plastic(not metal)
hammer and start tapping on the various metal mountings with your repeater
keyed. You will soon find the culprit. It could be ANY piece of metal, be
sure
to try them all. Don't add anything to the pole until you find the loose
part.
Also try nudging the pole with your hip to see if you can make it act up.

If the PTT button is plastic then the inner piece is broken. It can be
replaced with a rubber version without taking the radio apart. The
handmike jack has probably broken loose from the PC board and need to be
resoldered or replaced. On the keypad it needs to be disassembled and
cleaned using only alcohol and q-tips. Should takr care of all the
problems..

Sounds like the filter caps are not doing there job, they maybe leaky or open, Also check the noload current on the primary on the tramsformer with the secondary open. You might have a bad transformer. AS for the switch, live with it or by a new one for RS.

From: Linda Braspenning <linda.braspenning@skynet.be>
Subject: Electronic Parts

I study Product Development and am developing a device for pilots on
ships.
This device will be a combination of a portophone and a data-receiver,
both working on the marine VHF-frequencies (150-170 MHz). (Range: 50 km)
I will need 2 antenna's, since the speach-channel must be open on all
times and can't be shut down when data (in the form of a telegram) is

being received.

To be able to give this device a decent ~ ergonomic acceptable ~ form, I need some info on some electronic parts. I've tried the Internet and 've written to multiple companies, without any result.

Since I'm a real layman on the topic of radio-communication, I also need some answers on basic questions.

First of all: what are basic dimensions (if possible also prize and weight) for transceivers and receivers?

2. Does such a transceiver include a modulator/demodulator (~ receiver - demodulator)

3. How much battery-power is needed?

4. Can I use a fully integrated antenna on this? (I mean integrated within the body of the device, whithout any ducky antenna's sticking out)

Thanks very,very much for all the info you guys out there can give me.

Linda

Subject: FS: Netwave for a Wireless Laptop!

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection

to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

Subject: Help Kenwood TH-215A HT

I'm having trouble with my Kenwood TH-215A HT. I'm trying to determine if it is worth fixing. If so where!? The PTT switch isn't working. Also for some reason the external hand mike doesn't work. HOWEVER my headset VOX mike does work! The other problem I have is that the buttons on the keypad are sluggish. Sometimes the buttons work, sometimes not and sometimes I get double presses even though I only pressed once. I have taken the over off to see what I can do but it doesn't look promising.

Any hints, clues or suggestions would be appreciated.

From: Michael Melland <badger@vbe.com>
Subject: Help with Kenwood TS-830S fuse ??

I need to know the proper fuse to replace in the Kenwood TS-830S. The service manual lists a Kenwood part number (F05-6021-05)and simply "Fuse 6 amp". Would that be slow blow/fast blow/medium blow and 125V or 250 V ... AGC or what - Does it really matter ??? East Coast Parts won't tell or doesn't know the actual fuse and they want $1.14 for the replacement Kenwood part numbered fuse and $6.00 to ship it <egad!> The fuse inside was improper one (8 amp)so I have nothing to compare to.

just exchange your old one with a new one at RS. If you bought it
within 30 days from RS, you can exchange it over the counter.
Usually RS is kind for exchanging the deffective products.

Subject: IC-775DSP

I am just getting back active after a 10 year absence. I am looking at
the IC-775DSP transceiver and would be interested in any comments, one
way or the other. Specifically,

1. What is the difference between serial numbers less than 1900 and over
2000?

2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
that can accommodate 200w?

3. Any other comments on Icon, especially vs. the FT-1000D?

Thanks for any comments and opinions.

I've been using an RS rotator to turn a 4-element, 2-meter Cushcraft beam
for many years now. This beam is a bit smaller and lighter than yours,
but it's mounted to the mast at the very end, so the wind torque may even
be greater than yours. I also used an RS TV rotator for a while to turn
a 20-meter X-beam antenna. It turned the antenna fine, and the only problem
was that it occasionally lost sync between the control box and the antenna
in 45+ mph winds. But the sync is easily re-established.

As you say, they're cheap. And they do work better than some folks might
have you believe.

From: jeffa@ix.netcom.com (Jeff Anderson)
Subject: Heathkit TT-1 tube tester survey

I've finished (I hope) repairing and recalibrating my Heathkit TT-1
according to the manual's instructions. However, while making a
seperate transconductance measurement I've found that the TT-1's meter
reading is off by (roughly) 30 percent.

I don't know if this inaccuracy is unique to my unit, or if it is common to others. And because, as a kit, each TT-1 is custom, so to speak, there could be quite a bit of variation from unit to unit. I'd like to gather additional information from other users to check on the meter's accuracy, and thus propose the following:

I'll supply a small number of tubes (6, say). These will be my 'reference' tubes, and I'd like to send them to TT-1 owners for measurement on their units. Once the measurements are made, return the tubes to me along with the transconductance reading for each tube. I'll then correlate these readings and publish the results.

I'll try to include return postage with the tubes, but this could become expensive if there is much interest - perhaps the return postage might be handled by the other end (don't forget, this is in the interests of science!)? Or, perhaps we can do this as a "round robin" mailing, with each participant paying the postage to the next person on the list...

Anyone interested?

Thanks,

- Jeff, WA6AHL

I have used International Filters for years. Theyt started life out as Fox -Tango and then International Filter and Computer and now they have moved to Oregon. They have better shape factor, better ultimate rejection and are cheaper than Kenwood,Icom or Yaesu filters. Bottom line is they work better. I just got off the phone and ordered a Drop in 1ST IF filter for my Drake R4C. They are running a 10% off Dayton Special by the way.

Hi and thank you for reading.
I purchased a Maggiore reciever R4V and had a TS-32P tone board
installed.
I hooked it up to my repeater controller and the Squelch Burst is
terrible?
even with the squelch fully shut it is still harsh, sounds like "One
Adam 12"
Anyone with the expierence with this problem?

I heard there is a cap by the discriminator somewere that could be
changed?
I have the schematic for this reciever.

What does it do ?? No output or low output ?? I have one on the shelf that I just fixed it had both output transistors blown and the reason they were out is because the switching diodes were blown. The switching diodes blow because of operating in an area were there is another strong station like at Field Day or tuning up another radio in the shack. They fail in the shorted or low resistance mode. What happens is the output stage never turns off even during receive. They are alwayed biased on.

It cost me about $150 just for the parts. What condition is the radio in ?? It just may be time to sell it as is and buy another more modern radio for the club. I am only giving you me story of what was wrong with mine and that doesn't mean that the same think is wrong with yours. Drake will still fix these radios but don't know what they will charge. If you decide that you are going to do an upgrade let me know and I might buy your radio as a parts radio.

Good Luck

3638. Panasonic E-15 monitor 15" ??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: FCFB17A@prodigy.com
Message-ID: <5llbr8$10fa@newssvr01-int.news.prodigy.com>
Source record: 175295

I am looking to replace my six year old Compudyne SVGA monitor for my 100mhz pentium with Mystique video card running Windows 95. I saw the Panasonic E-15 monitor at Best Buy for $299. Anyone have any experience with this monitor? What others should I consider in this price range? I don't mind spending more if I am going to see something for my money, but I want to stick with a 15" monitor. Thanks for any help. --- Steve

3640. Which Dual Band HT??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: dirwin@imap2.asu.edu
Message-ID: <Pine.SOL.3.91.970517185519.25896B-100000@general2.asu.edu>
Source record: 175297

I am considering the purchase of a dual band HT, and would like comments
good, bad and otherwise on the following:

Alinco DJ-G5

Icom IC-W32A

Kenwood TH-79A(D)

Yaesu FT-51R

e-mail or posting in this newsgroup is fine, as I check both regularly.

BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband and
one-way repeat functions". What is the one-way function? Sounds like
a single band repeat function, but I don't want to make assumptions.

Thanks and 73's,
Dave

>

I think that your problem might be caused by noise at HF. With VHF FM, your receiver's squelch circuit keeps the DCD in the 3105 chip from falsing, but with HF SSB receivers, there normally isn't any squelch. Also other signals will probably affect DCD. The Baycom modem probably isn't really good enough for the demands of HF operation, although possibly you could modify the circuit to add state-machine DCD, which would help this situation. See www.tapr.org for a simple state-machine DCD kit which could be added to the modem. A TNC designed for HF operation, such as the MFJ 1278 would probably be a better solution, however.

Bob

From: flytyer105@aol.com (FlyTyer105)
Subject: Advice on HF Equipment

I am close to getting my General, and am looking at used HF equipment for my first station. I have a few questions I need answered from the 'old time Hams' in radio. How would you answer/recommend the following:
. Digital or analog radio?
. What is the oldest (19XX) rig I should look at for purchase?
. What features should I look for in a quality HF radio?

. What should (if any) I avoid? Brand/features/age?
. Are repair parts avaiable to fix older used tube radios?

I am looking at all the gear, and am confused on where to put my money the first time out on HF. I have a G5RV outside now, and am excited about my pending upgrade to get on the HF bands. I have been listening for about 2 years to you folks talking and working DX. I have a borrowed Collins 73 S line here but have to return it soon.

Thanks for your time/73

From: Doug@E_Fresh.net (Mr. Doug)
Subject: Astron RS-20M Be Dead..Hep Me!

I have an Astron RS-20M supply that stopped working. It has been in continuous service for 14 months at my repeater site.

One day the supply stopped working. The only visible symptom was a blown 5A fuse. The repeater was fine (indicating no catastrophic line surge had occured to both) as a backup power supply I put in line returned it to service. I have PolyPhaser line & coaxial surge protection installed.

When I got the P/S home, I did not see any visual signs of a major failure. No smoke trails, etc. Each time I installed a new fuse (with the supply both loaded and unloaded) and powered up, the fuses blew.

I looked inside with a multimeter while referencing the schematic and did not readily see anything that had failed to ground. All internal connections are good and there does not seem to be anything irregular with the PC board.

I replaced the voltage regulater IC on the PC board, but no dice. What could be failed? What kind of systemtic approach would anyone recommend (short of desoldering diodes, power transistors, etc.) to pinpoint the problem?

I have seen this same model (but not this same supply) go into the crobar state due to RF interference. The RS-20 would be energized, but there was only 2-3v DC output at the terminals. The problem would clear up when the power switch was cycled off and then back on. The fix for that was to replace three caps on the board with ones of different values. So, I would have to rule out any RF interference on this one.

Anyone have any helpful suggestions?

June 97 QST has a review that says that it works, is just as accurate as the other meters in its price range, but is slow to react to changes, like when you tune a transmatch.

From: "Terry Crothers" <vk8ktc@ozemail.com.au>
Subject: Wanted: FT-ONE "Local Unit" board

Hello my friends,
I have a problem with my Yaesu FT-ONE. The symptoms are that folks can hear my USB transmissions clear on LSB and poorly on USB.
I have traced the problem to the 24.5Mhz carrier oscillator not being on the correct frequency.
I am unable to adjust it to the specs, even after replacing the Xtal and

varactor. Parts for this rig are difficult to source.
I'm now at the end of my patience and would like to purchase from someone,
the "Local Unit" board, new or used. The manual indicates it's symbol
number as PB-2253 (Early Model)
(The S/N of the FT-ONE is 020019)
Looking forward to any replies.

Subject: Advice on HF Equipment

> I am close to getting my General...

Congrats!

>... and am looking at used HF equipment for my first station. I have a
few questions I need answered from the
> 'old time Hams' in radio
^^^^^^^^

Well, I *certainly* qualify in that department :-)

> . Digital or analog radio?

I guess you're talking about the frequency display. You'll be lots happier
with a digital display.

> . What is the oldest (19XX) rig I should look at for purchase?

Probably around 1985. There are lots of older rigs around, but it gets
harder and harder to find parts for them. May early solid state radios had
custom ICs, which are no longer available. If you get one of those, and the
IC dies, your radio becomes a tasteful but expensive paperweight.

> . What features should I look for in a quality HF radio?

Good filtering, good dynamic range, coverage of "WARC" bands (an issue on
some older radios). Some earlier radios had a limited number of memory
channels; that may be an issue if you care about that sort of thing.
Earlier radios generally lacked a keypad, which allows you to directly
punch in a frequency. Nice to have but you can live without it if you have
to. Also, general coverage receivers are less common in older rigs. Many
recent rigs have digital signal processing of one kind or another; a nice
feature, missing on older rigs.

Some radios have a built-in power supply, others require an external 12
volt supply. This is a good news / bad news situation. An AC rig is nice
in that you don't have to buy a power supply (usually another $150 or so),

but you can't easily use it mobile or portable. The DC rigs are easy to use portable, but you have to pop for the DC supply.

> Are repair parts avaiable to fix older used tube radios?

It's getting harder and harder to find tubes, and the price is going up. I'd avoid all-tube rigs if I were you.

> I have a G5RV outside now

Your G5RV will work just fine, but you will need an antenna tuner for transmitting. Many modern rigs have them built in.

> I have a borrowed Collins 73 S line here but have to return it soon.

The S-Line is legendary, but still highly regarded. However, it lacks many of the modern features, and owners are engaged in a more-or-less endless search for tubes.

It all comes down to how much you want to spend. If you're trying to do this on the cheap, try to find a clean Yaesu FT-101ZD. This was the last of the -101 line, and is a very fine radio. It has tubes in the final power stages, but is mostly solid state, and the tubes are of a common type that's relatively easy to find. The Kenwood TS-830 is also a very nice radio. You should be able to get these in good condition for around $500 or so. If you can go higher, the best deal on a used radio right now is probably the Yaesu FT-990. This rig just went out of production; it was replaced by the FT-920.

The 990 is a fine performer with lots and lots of nice features, including a very effective built-in antenna tuner. There is an AC version with built-in supply, a DC version, and some that have both an AC supply and a DC power input jack; best of both worlds. I have one of those, and I like it a lot. These were recently going for around $1500, but with the 920 just introduced at $1800 new, it seems to me that the price of used 990s will have to edge down a bit. With a little shrewd shopping at hamfests and surfing around the net (try rec.radio.swap), you should be able to find a nice one for $1200 or so. Best of luck, and 73...

Subject: ALINCO EC10 / LPD radio

I have bought a LPD radio from ALINCO. The name is EC10.
The low power device has 10mW output power.

Let me know, how to change to change the output power from 10mW to 50 or 400mW.
Is the frequency after the change the same?

From: a313@Lehigh.EDU
Subject: Ameco TX-62 - HELP!

Couldn't resist the post... My old rig ran with a Dow Key relay off an octal socket plug. Sounds like it may be to obvious to think the relay coil has a dirct path to ground. I used to use a foot switch with mine to trigger the Dow Key.

10 watts sure sounds like a soft final. I used to get 35 out with the VFO-621. By the way... Later versions of the VFO-621 were a beautiful hetrodyne mixed scheme. Really top drawer when it came to stability. I used to run the rig with an attenuator to work thru the OSCAR satelites when the down link was to 10 meters. The final days of my 62 were use as a six meter beacon. The rig was rugged enough to run 24 hours a day on cw.

Subject: FT50R beltclip and mods?

I have some questions about the Yaesu FT50R.

1) Is the beltclip off the VX-10 better then the regular one and is
it spring loaded?

2) How much for it and where can I get one (belt clip)?

3) Is there any way I can enter blocked out frequencies by the
Yaesu software (freq's between 200 & 300 MHz)? I heard older
versions of the software would.

4) Any other software out for it?

5) Is there a mod to let me use 5kHz steps above 590MHz?

6) Is there or will there be any fix for the Wide FM problem?
I heard of a software fix, is this true?

>
> gworth@ibm.net

George:
What is happening is that when you touch any piece
of metal
to any part of the system which has RF current flowing in it you generate
a small arc. This is the scratching you hear in the repeater. The problem

is that you have some piece of metal on the pole that is loose and moving
in the wind. I would suggest climbing the pole with a plastic(not metal)
hammer and start tapping on the various metal mountings with your repeater
keyed. You will soon find the culprit. It could be ANY piece of metal, be
sure
to try them all. Don't add anything to the pole until you find the loose
part.
Also try nudging the pole with your hip to see if you can make it act up.

If the PTT button is plastic then the inner piece is broken. It can be
replaced with a rubber version without taking the radio apart. The
handmike jack has probably broken loose from the PC board and need to be
resoldered or replaced. On the keypad it needs to be disassembled and
cleaned using only alcohol and q-tips. Should takr care of all the
problems..

Sounds like the filter caps are not doing there job, they maybe leaky or open,
Also check the noload current on the primary on the tramsformer with the
secondary open. You might have a bad transformer. AS for the switch, live with
it or by a new one for RS.

From: Linda Braspenning <linda.braspenning@skynet.be>
Subject: Electronic Parts

I study Product Development and am developing a device for pilots on ships.
This device will be a combination of a portophone and a data-receiver, both working on the marine VHF-frequencies (150-170 MHz). (Range: 50 km)
I will need 2 antenna's, since the speach-channel must be open on all times and can't be shut down when data (in the form of a telegram) is being received.

To be able to give this device a decent ~ ergonomic acceptable ~ form, I need some info on some electronic parts. I've tried the Internet and 've written to multiple companies, without any result.

Since I'm a real layman on the topic of radio-communication, I also need some answers on basic questions.

First of all: what are basic dimensions (if possible also prize and weight) for transceivers and receivers?

2. Does such a transceiver include a modulator/demodulator (~ receiver - demodulator)

3. How much battery-power is needed?

4. Can I use a fully integrated antenna on this? (I mean integrated within the body of the device, whithout any ducky antenna's sticking out)

Thanks very,very much for all the info you guys out there can give me.

Subject: FS: Netwave for a Wireless Laptop!

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection
to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

Subject: Help Kenwood TH-215A HT

I'm having trouble with my Kenwood TH-215A HT. I'm trying to determine if it
is worth fixing. If so where!? The PTT switch isn't working. Also for some
reason the external hand mike doesn't work. HOWEVER my headset VOX mike does
work! The other problem I have is that the buttons on the keypad are
sluggish. Sometimes the buttons work, sometimes not and sometimes I get
double presses even though I only pressed once. I have taken the over off to
see what I can do but it doesn't look promising.

Any hints, clues or suggestions would be appreciated.

From: Michael Melland <badger@vbe.com>
Subject: Help with Kenwood TS-830S fuse ??

I need to know the proper fuse to replace in the Kenwood TS-830S. The
service manual lists a Kenwood part number (F05-6021-05)and simply "Fuse
6 amp". Would that be slow blow/fast blow/medium blow and 125V or 250 V
... AGC or what - Does it really matter ??? East Coast Parts won't tell
or doesn't know the actual fuse and they want $1.14 for the replacement
Kenwood part numbered fuse and $6.00 to ship it <egad!> The fuse inside
was improper one (8 amp)so I have nothing to compare to.

just exchange your old one with a new one at RS. If you bought it
within 30 days from RS, you can exchange it over the counter.
Usually RS is kind for exchanging the deffective products.

Subject: IC-775DSP

I am just getting back active after a 10 year absence. I am looking at
the IC-775DSP transceiver and would be interested in any comments, one
way or the other. Specifically,

1. What is the difference between serial numbers less than 1900 and over
2000?

2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
that can accommodate 200w?

3. Any other comments on Icon, especially vs. the FT-1000D?

Thanks for any comments and opinions.

I've been using an RS rotator to turn a 4-element, 2-meter Cushcraft beam
for many years now. This beam is a bit smaller and lighter than yours,
but it's mounted to the mast at the very end, so the wind torque may even
be greater than yours. I also used an RS TV rotator for a while to turn
a 20-meter X-beam antenna. It turned the antenna fine, and the only problem
was that it occasionally lost sync between the control box and the antenna
in 45+ mph winds. But the sync is easily re-established.

As you say, they're cheap. And they do work better than some folks might
have you believe.

Subject: Heathkit TT-1 tube tester survey

I've finished (I hope) repairing and recalibrating my Heathkit TT-1 according to the manual's instructions. However, while making a seperate transconductance measurement I've found that the TT-1's meter reading is off by (roughly) 30 percent.

I don't know if this inaccuracy is unique to my unit, or if it is common to others. And because, as a kit, each TT-1 is custom, so to speak, there could be quite a bit of variation from unit to unit. I'd like to gather additional information from other users to check on the meter's accuracy, and thus propose the following:

I'll supply a small number of tubes (6, say). These will be my 'reference' tubes, and I'd like to send them to TT-1 owners for measurement on their units. Once the measurements are made, return the tubes to me along with the transconductance reading for each tube. I'll then correlate these readings and publish the results.

I'll try to include return postage with the tubes, but this could become expensive if there is much interest - perhaps the return postage might be handled by the other end (don't forget, this is in the interests of science!)? Or, perhaps we can do this as a "round robin" mailing, with each participant paying the postage to the next person on the list...

Anyone interested?

Thanks,

- Jeff, WA6AHL

I have used International Filters for years. Theyt started life out as
Fox -Tango and then International Filter and Computer and now they
have moved to Oregon. They have better shape factor, better ultimate
rejection and are cheaper than Kenwood,Icom or Yaesu filters. Bottom
line is they work better. I just got off the phone and ordered a Drop
in 1ST IF filter for my Drake R4C. They are running a 10% off Dayton
Special by the way.

Must be something wrong with yours, Mark. Never heard of any HTX-202
doing what you describe. I have two of these rigs, and they perform
flawlessly.

3651. Re: HELP: Rpt noise when windy!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: Michael Mello <kq7e@sprynet.com>
Message-ID: <01bc62fb$d195cca0$f099aec7@kq7e>
Source record: 175308

Sounds like the hardware (if it's rusty, that's you're problem) is acting as a non-linear rectifier. When the different transmitters key, the RF mixes in the rusty joints, and you now have some rather spectacular, albeit unwanted, RF products floating around. These may not be evident on UHF.

I had a Phelps Dodge Station Master in a fiberglass radome go bad, and would produce the same results. What died were a few of the antenna elements inside the radome, which is really a PITA to get into. They were intermittent, flexed about, and whenever the TX keyed up, generated crackles, noises, and non-linear products all over God's creation. Same effect. So, that's two things to look at, rusty hardware (replace it, bond around it, etc) or bad antenna (take it down and fix/replace it).

Now, if you are using the DB Products, (say a DB214) you'll definitely want to bond the top mast to the bottom mast with a few pieces of good braid. The two pieces, while fitting into one another, do get corrosion in the joint, and give the same wonderful noise problems.

Good luck!

73, Mike N5MJ (ex KQ7E)

3652. Any HTs with Rcv Attenuator?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: n2ah@sprynet.com
Message-ID: <5ll8tj$a20$1@juliana.sprynet.com>
Source record: 175309

Does anyone know of an HT that has a selectable receive attenuator? Seems like it should be easy enough
to include one and it would permit operation with a roof-top antenna without a lot of intermod.

Any info on this would be appreciated.

Thanks,
Art Harris, N2AH
n2ah@sprynet.com

We're clearing out the garage!

This garage, however, contains an extensive stockpile of NOS and used vacuum tubes which has been growing since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Thanks for your interest!

From: Linda Braspenning <linda.braspenning@skynet.be>
Subject: Electronic Parts

I study Product Development and am developing a device for pilots on ships.
This device will be a combination of a portophone and a data-receiver, both working on the marine VHF-frequencies (150-170 MHz). (Range: 50 km)
I will need 2 antenna's, since the speach-channel must be open on all times and can't be shut down when data (in the form of a telegram) is being received.

To be able to give this device a decent ~ ergonomic acceptable ~ form, I need some info on some electronic parts. I've tried the Internet and 've written to multiple companies, without any result.

Since I'm a real layman on the topic of radio-communication, I also need some answers on basic questions.

First of all: what are basic dimensions (if possible also prize and weight) for transceivers and receivers?

2. Does such a transceiver include a modulator/demodulator (~ receiver - demodulator)

3. How much battery-power is needed?

4. Can I use a fully integrated antenna on this? (I mean integrated within the body of the device, whithout any ducky antenna's sticking out)

Thanks very,very much for all the info you guys out there can give me.

Linda

Subject: FS: Netwave for a Wireless Laptop!

How would you like to stay connected to your desktop
computer at home or at work with a wireless connection
to your laptop computer? Move from room to room or
relax in your backyard while you surf the Internet,
receive email, or run ANY applications!

Well, you can do this and more with the Netwave
wireless link.

FOR SALE - Netwave Wireless Networking For Your Laptop!
Consists of two items:

(1) Netwave AirSurfer Wireless LAN PC Card
Tiny card plugs directly into any PC Card
slot on your laptop computer.

(1) Netwave AirSurfer Access Point
Small 2GHz transceiver with another PC
Card which attaches to your desktop
computer.

** As New..in the box with all manuals, asking
$750.00 or Best offer...(I paid over $1600.00 new).
Will consider trade for various Ham gear...especially
Collins, Drake, vhf/uhf amps (10w in - 100w out),
let me know what you have...will consider all offers.

You can contact me via email at sandy@sandy.com
or call (408) 257-5383.

To find out more about this great product, checkout
Netwave's Web site. All product info and free software
updates are available at:

http://www.netwave-wireless.com/products.htm

I sold my IBM ThinkPad recently ...so don't need
this anymore. The Access Point is brand-new, tested
but never used. I had a minor problem with my original
unit and Netwave replaced the entire unit just before
I sold my laptop..,so you get a brand-new unit.

Subject: Help Kenwood TH-215A HT

I'm having trouble with my Kenwood TH-215A HT. I'm trying to determine if it
is worth fixing. If so where!? The PTT switch isn't working. Also for some
reason the external hand mike doesn't work. HOWEVER my headset VOX mike does
work! The other problem I have is that the buttons on the keypad are
sluggish. Sometimes the buttons work, sometimes not and sometimes I get
double presses even though I only pressed once. I have taken the over off to
see what I can do but it doesn't look promising.

Any hints, clues or suggestions would be appreciated.

From: Michael Melland <badger@vbe.com>
Subject: Help with Kenwood TS-830S fuse ??

I need to know the proper fuse to replace in the Kenwood TS-830S. The service manual lists a Kenwood part number (F05-6021-05)and simply "Fuse 6 amp". Would that be slow blow/fast blow/medium blow and 125V or 250 V ... AGC or what - Does it really matter ??? East Coast Parts won't tell or doesn't know the actual fuse and they want $1.14 for the replacement Kenwood part numbered fuse and $6.00 to ship it <egad!> The fuse inside was improper one (8 amp)so I have nothing to compare to.

just exchange your old one with a new one at RS. If you bought it
within 30 days from RS, you can exchange it over the counter.
Usually RS is kind for exchanging the deffective products.

Subject: IC-775DSP

I am just getting back active after a 10 year absence. I am looking at
the IC-775DSP transceiver and would be interested in any comments, one
way or the other. Specifically,

1. What is the difference between serial numbers less than 1900 and over
2000?

2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
that can accommodate 200w?

3. Any other comments on Icon, especially vs. the FT-1000D?

Thanks for any comments and opinions.

I've been using an RS rotator to turn a 4-element, 2-meter Cushcraft beam
for many years now. This beam is a bit smaller and lighter than yours,
but it's mounted to the mast at the very end, so the wind torque may even
be greater than yours. I also used an RS TV rotator for a while to turn
a 20-meter X-beam antenna. It turned the antenna fine, and the only problem
was that it occasionally lost sync between the control box and the antenna
in 45+ mph winds. But the sync is easily re-established.

As you say, they're cheap. And they do work better than some folks might
have you believe.

3657. Yaesu FT-901 DM info?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: davide70@aol.com
Message-ID: <19970517211200.RAA26545@ladder02.news.aol.com>
Source record: 175314

I just purchased a Yaesu FT-901 DM HF rig at a swapfest. Came with a manual but there's no mention of when it was manufactured. Does anyone know when they built this thing? Seems like a nice rig, but *heavy* (about 40 lbs). If you know when it was built and how much it retailed for, I'd appreciate your sharing that info with me. (I'm curious who's older -- me or it!)

Please reply by email--thanks!

Dave KB0YSN

3658. FS: SP901P skpr/phone patch for FT-901

Newsgroup: rec.radio.amateur.equipment

A note from "The Antique Radio Collector" <<
http://members.aol.com/wrldradio/index.htm >>

Beginning this month, we are happy to announce our affiliation with "Amazon.com " We believe you will find our new book store offers one of the most comprehensive listings of books and tapes relating to the collecting of Antique Radios, Old Time Radio and Amateur Radio, and related subjects offered anywhere, many with discount pricing. Hopefully, we have now found a way to support our website so that we may continue to offer "free classified advertising" to collectors and maintain a site you'll find worth visiting often.

You should also know that all transactions made from the store are handled directly by Amazon.com, through their "Secure Server" service, for your protection over the Internet "and all orders and shipping are processed directly by Amazon Books".

So, when you need a resource book or just feel like reading a good book (or listening to OTR audio tapes), please visit us at:

http://members.aol.com/wrldradio/bookstore/bookstor.html

<< "Amazon.com Associates" list selected books in an editorial context that helps you choose the right books. We encourage you to visit "The Antique Radio Collector" often to see what new books they've selected for you.

<< Thank you for shopping with an "Amazon.com Associate".

<< Sincerely,

<< Jeff Bezos

<< President, Amazon.com

3660. Panasonic E-15 monitor 15" ??

I am looking to replace my six year old Compudyne SVGA monitor for my 100mhz pentium with Mystique video card running Windows 95. I saw the Panasonic E-15 monitor at Best Buy for $299. Anyone have any experience with this monitor? What others should I consider in this price range? I don't mind spending more if I am going to see something for my money, but I want to stick with a 15" monitor. Thanks for any help. --- Steve

Ron,

JOTA this year is on the 18th and 19th October.

It is _ALWAYS_ on the third full weekend of October. Knowing this, you
can plan your JOTA activities for any year

I hope that you have a good time on it.

73,

Jim, ZL2APE,
New Zealand National Organiser for JOTA,

3670. $299 VOX TELEPHONE PATCH

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: kc4srn@aol.com
Message-ID: <19970517042501.AAA28263@ladder02.news.aol.com>
Source record: 175408

CSI CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed at base. 90 speed dials, two level safety codes. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with nice base antenna, more height or an amplifier. Ever more range through a repeater. Just tune the rig to a wide coverage repeater (A club could run this patch from a home). Connects to any rig so use it with a LOW COST spare 2m (220 or whatever). Easy volume adjustments and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, YOU are the control operator. Plus, a long list of other professional features. With a cross-banding rig in your car, you can go all over town making AND RECIEVING calls on simplex with your HT on low power 440! Set it to ringout, send DTMF (touch tone) code or use a silent PL tone, sent to your HT. Imaculate $299

Try replacing the broken wire leading from the PC board to the center pin of the coax connector. And don't leave the radio on your belt when you sit down. The force against the antenna wiggles the center pin of the BNC connector, causing excessive flexing of the (solid) wire mentioned above, causing it to break.

Just a guess, YMMV, HTH, etc.

Matt

3676. News Rover -- Searches newsgroups for what you want - 218 0517040010 FRK

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: 218@sandh.com
Message-ID: <5ljrvr$v28@news.triton.net>
Source record: 175414

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

3681. Deep Cycle Battery Charger Manufacturers?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-17 00:00:00 UTC
From: zaax@aol.com
Message-ID: <19970517123901.IAA19255@ladder02.news.aol.com>
Source record: 175419

Does anyone out there know of any manufacturers of deep cycle battery chargers other than A&A? I am looking for a charger that puts out at least 1 amp
and will also taper the charger down. Any info on this will be greatly appreciated.

>
> John KE6TGN

Hi John
From Bob Heil, K9EID's fine book "Heil Ham Radio Handbook", he discusses the hi Z mic into a low Z input. This of course swamps the mic and results in reduced output. He recommends placing a 100K or larger resistor in series with the D-104 hot lead. He also recommends a transformer to match impedances. He sez the D-104 works best into a 1 Megohm (or higher) load. So choosing a matching transformer from 1 Meg down to say 600 Ohms ought to do the trick.

Bob's book has no ISBN number -- but is published by Melco Publishing, PO Box 26, Marissa, Il, 62257. Lots of good info including microphone equalization.

The D-104 has a peaked high frequency response so when properly matched it gives sparkling highs -- good for breaking pileups. The Kenwood TS-850 even has a control marked "High Boost" which accentuates the high freq audio tones.

1.... Are you a Ham?

2.... If you are, you should leave this message on their home page.

3.... You're experience is abnormal, in my experience.

4.... Did you act like an asshole?

5.... I prefer HRO to all the other sales outlets combined.

6.... Do you have a chip on your shoulder, because you are a no-code tech?

7.... I have purchased on seperate occasions, everything from an 850 to 2
pl259s and always been treated well.

8.... Have a good day.

With all due respect, to say something is "better" is subject to what's
important to the person. _BOTH_ units are very good.

If smaller size and dual bands are critical to a person, then the Yaesu
FT-50RD is the better unit.

However, if low cost and an easy to operate unit are important to a person,
then the Radio Shack HTX-202 is ideal for that person.

My friend Bill (W6DIV) owns a Yaesu FT-50RD. He likes the small size and
dual band ability.

I own a Radio Shack HTX-202. It may not be small or sexey, but it sure
does what I want it to do.

I guess that when someone asks, "What's the "best" HT to buy?" It's a matter
of what factors are critical to them:

Cost
Single or Dual Band
Size & Weight of the unit
. . .

>
> 73,
> Jimmy Kahn, WA2ILK

Yes, I'd love to see the laws change where one MUST show proof that they
have a ham license before they could purchase any ham transmitters. As for
mail order, if I place a phone order as KF6JHG, the call sign database
will have my address. If I want them to ship to another address, then
a fax (or photocopy) of the license would be required.

I'll guess that Radio Shack wouldn't like that law. It might cut a little
into their sales. However it would cut down on the sales of equipment to
the jammers and jerks.

I'm sure that some Bozo who wants to buy the equipment will find a way
around the system, but such a law would slow or stop most of them.

From: ve1rj@ns.sympatico.CA
Message-ID: <199705190220.WAA28016@smtp2.sympatico.ca>
Source record: 175176

I am wondering if anyone has any answers to a question I have about the FT-736R.

I have just put in the 6M module and have played around a bit with the scanning option on the rig. I want to be able to scan from say 50.100 to 50.200. During my research I have to have the squelch up in order for it to scan properly. Playing with the RF gain and the Squelch I was able to get it to scan satisfactorly and it is able to pick up weak stations and stop scanning. I am using the pause button in so it only pauses for 5 secs then carries on. Stopping almost immediately again because of the signal. This is good because I know someone is on there.
However, my biggest problem is the bloody beep it makes when stopping the scan, when starting over the scan (using pms) or even when hitting buttons.

Is there anyway in turning this beep off?

Tx in advance

Bill (VE1RJ)

Jim,

The best service is almost always factory service. RL Drake is still in
business and will still service your radio. I'd send it them for an
estimate.

I feel the same way as you about the attitude of the sales staff. The
funny thing is that the NEW SALESPEOPLE have a much more friendly
attitude than the salespeople who have been there for a while. I think

that is because the salespeople who have been around really want out but can't land a better job. So they languish at HRO and take out their frustrations on the NEW HAMS.I have ordered just recently and had a positive experience with a New Salesman. BOB FERRARO (owner of HRO) should dump the salespeople with attitudes or send them to therapy.

> that can accommodate 200w?

I'm not sure what `remotely tuned' implies. But if you include
automatic tuning in that, then you may be interested to know that I
learned from SGC at Dayton this year that the company has now upped
the rating on the SG-230 to 200w. This rating change is based solely
upon more recent testing and analysis and not on any component
changes, and so this higher rating applies to SG-230's already put
into the field under the previous 150w rating.

If in doubt, check with the company.

Regards,

Although I love my HTX 202, out-of-band receive is the reason I'm looking for
a new primary HT. Weather changes can be a great thing to hear about
when you travel. Other than that though, I can' complain about the RS HT.

Yes there is menu system. Press "F" + "M-set" and you can walk through
menu with up and down buttons ("*" and "#"). CTCSS setting is "rc"
and "tc" on the display.

Source record: 175195

I don't think the FT-920 has dual receive like my FT1000MP does. It does have dual display and dual vfo knobs, but no mention of dual receive in their ads anywhere?? The FT1000MP has dual s meters, dual volume controls, sub bandswitch, and dual squelch of which I see none on the picture on of the FT920. It does seem to have a button labeled DW in the picture. It would be nice to hear from someone who has actually operated one. The FT920 does have digital bandwidth control on the front panel while the IC756 does not have any digital bandwith control capability. I played around with an IC756 at AES and was a bit annoyed with the lack of controls on the front panel. It was kind of frustrating having to go into menus to do common things like change bandwidths. The scope is neet, but is it really useful? Word is that unless a signal is s5 or better it really will not be noticeable. The QST review found some major problems with the transmit section of the IC756. Will Icom soon have an IC756A and then an IC756MKII?? Icom rarely gets a rig right on first try. If you have a FT1000MP set up right you will have some of the best sounding transmitted audio in amateur radio, I hope the FT920 will have the same sound - it does have similar dsp options for transmit. The IC756 rigs that I have heard on the air sound good, but not exceptional. Just my two cents worth on the subject. ---- Steve N9ROU

3716. numeric keypad for icom ic 706?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-18 00:00:00 UTC
From: h.karahasan@pinneberg.netsurf.de
Message-ID: <6X5e0Rksv2B@up-20088.netsurf.de>
Source record: 175204

Hello oms!
I am using the ic 706 for more than a year now. Is there a numeric keypad to enter the qrg available for that transceiver? It has a socket at the back of its housing to get the necessary data, but I think, there is no such keypad available. I have been told by icom europe that the only way to have the ability to enter the qrg directly is by connecting the 706 to a computer. But I cannot have a pc with me, when I am in holiday.

I really need such a numeric keypad, because I am blind and finding the correct qrg is very finicky, though the radio has a speech synth telling me the frequency. Especially when I want to qsy, I need to much time.

Retail establishments have been asked to become the TAXMAN, and they seem to be complying without too much kicking and screaming. They charge city and state sales tax, they with hold income tax from their employees for the city, state, and feds, they withhold mdicare tax, they withhold social security tax. Then after all this TAXMAN work for the government, if they show a profit, they pay more tax. They even hire extra people (a whole office full) to do this sort of TAXMAN work. We won't even go into OSHA, right to work, and handicap access requirements.

Now I want to buy a transmitter that I am unauthorized to "excite." I write you a draft from a commercial bank to pay for the transmitter and I have to produce TWO forms of identification, and you want to write the SSN and Drivers License number on the face of the check. Since you are unauthorized to use my SSN for anything, and I refuse to give it to you, you say that you will not accept my draft. Company Policy or something?

So I guess that asking the patron to produce the FCC issued WALLET copy of his/her/it's license is too much government interference? Maybe it should be "Company Policy" rather than having to have the government tell us what, when, how, and why to to everything.

Jim, sorry to have nullified your context, but I trimmed this a bit
(your info is complete, however). Today, most people are worried about
how something "looks" or if they'll get sued rather than do the right
thing. Selling ham gear to the unlicensed may not be illegal, but in my
opinion is unethical. The retail establishment that does this is not
interested in the amateur service, only in profits.

It would help if you started your reply on a new line.

The FT50R will not TX out of band unless modified.
There is no way you can legally TX out of band with the FT50R even if
you can legally use another HT outside amateur bands.

You should avoid any HTs which can transmit outside of the 144 to 148 Mhz amateur band. It is legal for you to use such a radio since amateurs are expected to have enough knowledge to avoid out of band txing. However, there is no point in being able to tx out of band and having a HT that can not do so will avoid the temptation and possible accidental out of band txing.

tnichols@nuteknet.com (Timothy Nicholson) wrote:

:I have just recently (yesterday) passed my technician exam and am looking for a
:good, inexpensive HT with which to start. When I say inexpensive, I
:mean anything around $200. I live in Raleigh, NC, and have found two stores
:close by that carry radio equipment and who also have web sites. Here are the
:models I am considering (in order as listed). They all have CTCSS
:encode/decode, and all the other std. options needed in a HT.
:
:1) ICOM IC-T2A, $199. I am impressed with the features of this radio for the
:price. It has the widest TX (140-150MHz) and RX (136-174MHz) of any radio
:listed here.
:
:2) Kenwood TH-235A, $189. This is the lowest priced radio listed, but is
:narrow on the TX range (144-148MHz). I have talked to a couple of hams who
:don't care for the Kenwood equipment, but I didn't really get a good reason
:why.
:
:3) Alinco DJ-190T, $218. Nice options, but again a narrow TX range
:(144-147.995).

Are you sure you have an amateur license? You don't seem to understand
that your licence only permits you to transmit on 144 to 148 Mhz in the
2 metre band. Any greater transmitter coverage is only encouragement
to transmit illegally. I suggest you read your licence conditions before
you continue your search.

:4) Yaesu FT-10R/H, $259. This one is a little pricey for me, but has the most
:all-around features of any radio listed here. The info I have doesn't list the
:TX and RX ranges.
:
:5) Radio Shack HTX-202, $199. Although less expensive than the Alinco and
:Yaesu, I haven't seen many of these radios in use. Several hams have told me
:to avoid this radio.
:
:Being new to this hobby, I still don't know all the things to look for in a
:radio, so I turn to the experts, you who are experienced. Any feedback would
:be appreciated.

My recomendation is that you read the conditions of your licence to
confirm that you are limited to 144 to 148 transmit. Then you can stop
worrying about HTs that do not transmit outside that range. In fact it
will be to your advantage that the HT is limited to 144 to 148 since
that will remove the temptation to tx out of band.

:Please email me at timn@renewal-iis.com with any information

That is differant to your return address.

Barry

Howdy! Does anyone else take this magazine? There's an article in there on how one fellow built a fox transmitter controller using a Technological Arts ADAPT-11 microcontroller, where it would give a Morse code ID, an SK end-of-message signal, and had variable time intervals and a switchable SK function. I wish the author of the article had an Email address, so I could get a copy of his modified DEMO.ASM file, then I could see it for myself and try it!!

Anyone else interested?

I've had my Kenwood V7A for a month now. Mounted it day one in the car and it has done great. I like the audio, and the features. My only complaint about the audio is POSSIBLY my problem. I have a speaker floor mounted, and when I drive 70 with the windows open, I really have to crank it up to hear. So I'm sure it's my speaker location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them.

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice.

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In

day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary.

Good luck Joshua!!

3744. URM-120 Wattmeter $75

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-18 00:00:00 UTC
From: ae4cz@aol.com
Message-ID: <19970518134600.JAA24700@ladder02.news.aol.com>
Source record: 175242

I have three URM-120 wattmeters for sale for $75 each including shipping. They are manufactured by Struthers Electronics Corp. and come with two slugs. One slug covers 25-250 Mhz and the other covers 200-1000 Mhz. I do not have a HF slug to cover below 25 Mhz. Each slug has a knob to vary the power level to 10-50-100-500 watts. The connectors are male "N" on one end and female "N" on the other end. Also included in the deal is a real nice fiberglass case (14w x 11d x 11h approx). The original manual is also included. The meter somewhat resembles the Bird 43. There is an article discussing these wattmeters in the May 96 QST p.77 with a follow up in the Sep 96 QST p.77.

I can be reached at (601) 436-3568 or E-mail at AE4CZ@AOL.COM.

3745. HAM RADIO OUTLET SUCKS!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-18 00:00:00 UTC
From: Charlie Durand <cdurand@ix.netcom.com>
Message-ID: <337F0727.6539@ix.netcom.com>
Source record: 175243

Good morning,

I would like to ask everyone who reads this not to shop at any Ham Radio Outlet store ever again. Why? Here's why...

I work in sales. I am good at it. I make a lot of money. The reason I make a lot of money is because my customers are happy and give me their business. Why are they happy? Because I provide great customer service. I listen to my customer's needs and meet them on a daily basis. Yes, I do this so I can get their money. I also do it so the customer will feel good about giving it to me and I will feel good about taking it. When I spend money at Ham Radio Outlet I don't walk out feeling good about the whole thing. From the moment I walk in I feel as if I am being analyzed. Am I buying something or am I just looking. If I'm looking I'm suddenly a waste of time. When I do converse with a "sales" person. I'm treated like a retard. As if I should already know the answers to the questions I am asking. I try to ask intelligent questions in order to make an intelligent purchase. The sales people at Ham Radio Outlet treat me like I should walk in, throw down my money, and walk out. Don't want to make them work too much ya know? Well I walked out last time thinking, "I know my customers wouldn't put up with the terrible customer service at Ham Radio Outlet and neither will I." Ham Radio Outlet is the only game in town besides mail order. They have you over a barrel and they plan to keep you there. I myself hate mail order but that is the only place I am going to spend my money. The level of customer service certainly couldn't be any worse. I'm not sure why the people behind the counter at Ham Radio Outlet act the way they do. I know I'm not going to put up with it any longer.

Don't even ask me how they treat you when they find out you're a no-code technician. They almost throw up. It would be interesting to see what percentage of their business goes to no-code technician class operators.

>they could buy a Ham transmitter, that illegal transmissions on the Ham
>bands may slow down? You'll never stop the dedicated person who wants to
>break the law. But, there's a lot of people who may be not so dedicated,
>and they might be scared off by, say the Radio Shack employee who asks,
>"May I please see your Ham license?"

>What about mail order? Require a photocopy of a Ham license.

You are asking amateur radio dealers to become policmen then? It's not up to dealers to determine or to enforce any rules on who can and cannot operate transmitting equipment. And, not all hams carry copies of their amateur licenses when they go into retail establishments...do you refuse to sell to them? This is bucket 'o worms material.

Also, not ALL illegal transmissions are caused by unlicensed operators. I'd venture to say the vast majority of illegal transmissions are caused by licensed individuals or groups. Either for some political agenda, personal vendetta or the like. With more and more folks getting into the hobby we are going have a wider diversity of personalities -- good and bad. MORE - this means of both types - hence a greater number of infractions.

I have worked in the amateur retail business. I have sold transmitting equipment to unlicensed individuals. There was and is no law telling me to do otherwise. As a matter of fact it was my understanding I would have been breaking laws by refusing to sell to anyone.

We (as hams) don't really like this but for now there is not much we can do about it except to remain self-policing and to do what it takes - legally - to squelch these unhappy, psychologically challenged persons.

This same topic seems to come up about every six months or so and has been hash and rehashed. If you want to use analogies, etc. what about someone with a Technician license? Not a Tech Plus mind you. Should

that person be prohibited from owning a piece HF equipment? They don't have a license for it.... Should radios be manufactured for each class of amateur license? So, when you upgrade your ticket you have to upgrade your equipment also? If someone plans to become a ham, why can't they have the transmitting equipment already in their possession? There are a lot of things to think about. This truly can be a bucket 'o worms.

Perhaps this brings us back to the original question. How come the FCC doesn't think it's worth their time and energy to enforce their own laws regarding illegal transmissions? Doesn't Ham Radio provide a useful enough public service?

On the other hand... The FCC has got more important things to worry about these days, like how to give away "digital-TV" bandwidth to TV stations for free.

73,
Jimmy

I am a no-code tech, and I have bought two radios from HRO Atlanta, one by mail order, one in person. Both times I was treated well; each transaction required the sales people to go a little beyond just taking my money.

I did make one preliminary call to HRO, and only when I asked a question about out-of-band TX modification did I find the attitude less than friendly. This was before I had studied the FCC rules, before I had a license. At the time I thought the rep was being surly, but I now understand why.

From my experience, I would be happy to do business with them again.

3759. Re: TV antenna rotor strong enough?

Newsgroup: rec.radio.amateur.equipment

Source record: 175257
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.antenna

Up here in windy country Canada we mount the rotor down inside
the tower so that there is no side loading on the rotor unit
itself.
We are using Delhi type towers that have a flat plate at the top,
and just put a sleeve in the u-clamp on that plate and let
the main mast pass up though it.
It works, it's cheap and easy, and if you want to you can slide the
antennae up or down to repair/tune/or adjust.

>good, bad and otherwise on the following:

>Alinco DJ-G5

>Icom IC-W32A

>Kenwood TH-79A(D)

>Yaesu FT-51R

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband and
>one-way repeat functions". What is the one-way function? Sounds like
>a single band repeat function, but I don't want to make assumptions.

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

Charlie Durand <cdurand@ix.netcom.com> wrote:

<snip a lot of bad stuff about HRO>

It's hard to dispute what another person's experience has been, but I have had nothing short of excellent results over the last three years shopping at HRO. I have always been treated with the utmost respect and friendliness (and yes, I am a no-code tech.) I have gotten good advice, good service when a radio required repair (they handled everything, including shipping), and good deals on a bunch of radio stuff. 90% of the time I stop there I am just browsing or asking questions, and I am treated with the same friendliness as when I have money in my hand to buy something.

I have no affliation with any ham radio store - and there may be others just as good. But I felt the earlier posting regarding Mr. Durand's problems at HRO could use some balancing points of view.

We're clearing out the garage!

This garage, however, contains an extensive stockpile of NOS and used vacuum tubes which has been growing since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Thanks for your interest!

About a month ago we put out a problem message concerning pingponging (recycling) of our local repeaters. Received many excellent responses and appppreciate them.

To bring you up to date, we have eliminated one repeaters recycling by improving the chasis to ground system. It has virtually eliminated the recycling by 99% over the past month. So thank you for that recommendation.

The second repeater, which is about 10 miles away, is now experiencing some very serious intermod problems. It almost sounds like a combination of paging systems and taxi cab xmissions but we cannot hear any id what so ever. Spec analysers are being utilized to try and pinpoint the offending transmitter(s), if in fact that is what it is. We have just about eliminated any malfunction of the repeater system. It looks extremely clean but we have one more elimination test to do.

One other question that we need some help on from those of you who are expereienced with the unit. What squelch gate setting/adjustment have you set your systems for? This is not the repeater sensitivity adjustment, but the adjustable pot on signal level. e.g. the sensitivity to key the repeater). Presently, the repeater experiencing the intermod is set for .2 while the other one is set for.25.

Appreciate any comments on the settings. Again thanks. 73 Murray K3BEQ

The problem may not be just the old salespeople. Last month I wrote in to this newsgroup describing the experience I had with HRO regarding the purchase of a TL 922 amplifier from their Anaheim store. I paid for it, they charged my visa card for the amp, then they charged my card again for shipping, and then they refused to send it to me in Seattle because they didn't have a Kenwood box. After several calls initiated by me over a several week period trying to ascertain why "my" amp hadn't arrived, I discovered it hadn't even been shipped. A Kenwood box was unavailable, they refused to buy another box, and they refused to build a box, so naturally in frustration, I cancelled the sale. They refunded my money right away for the amp purchase, but did not refund my money for the second charge. By this point I was quite livid. Finally I got all my money back after several more calls initiated by me. Well to my surprise, a few weeks ago Bob Ferraro, President of the company, called me to find out what happened and apologize to me. I was impressed. He explained their shipping problems to me re: UPS and we discussed options. At the end of the call he asked me did I ever get that amp that I wanted? I hadn't, so he offered to call his stores to see if something in the used market was available. I told him this was unnecessary, but he promised to do it just the same. Our call was on a Friday, he said he'd call me the following Monday. I was so impressed by his "tackle it right away and fix it" attitude that I wrote a glowing note describing our conversation to this very newsgroup the following day. Well, did I ever hear back from him? Nope. Do I feel like a real sucker, AGAIN? You betcha. 73, de John, K7JY.

Hello all,

I have a new in the box IC728, purchased in February, along with the AT160 auto tuner, UI7 AM/FM module, and the FL100 500hz CW filter.

This is a full featured 100W rig, 100Khz to 30Mhz, triple conversion receiver, AM/FM/CW/SSB, passband tuning, speech processor, programmable tuning steps, NB/PreAmp/Attenuator, the works. All in a compact package. I paid $1650, asking $1250.

All items are new, in the box, and complete.

Thanks es 73's,
Don Rasmussen WB8YQJ/6

Hello I'm interested in buying one of these units myself. It wouldn't mind an overview.

Some of the things I'm concerned about:

It it pocket sized how long is it?
how big is the antenna, from the pictures I have seen it looks pretty big!
batteries, does it take ni-cads?

The rest is up to you.

Subject: FT-990 computer control for Windows95

If you're looking for a Windows 95/WindowsNT program to control your Yaesu FT-990 radio, I've decided to offer my MasterControl 990 as shareware. The features are noted on my MasterControl 990 home page at http://prairie.lakes.com/~medcalf/

You'll need an RS-232 to TTL adapter to talk to the FT-990, and one available COM port on your computer (the program supports COM 1 through COM 9). The shareware registration is only $25.00 and I'll be happy to consider all suggestions for improvements from registered users.

Sorry about the multiple posts, my server was telling me they were not
being found, and then when I came back on today, they were all here.

From: FCFB17A@prodigy.com (Steven Umbach)
Subject: TV antenna rotor strong enough?

I have used the Radio Shack rotor with a Cushcraft 13B2 with no
problems here for over four years near Chicago. The 13B2 has a fifteen
foot boom. The rotor and antenna are mounted in a 3 foot tripod on my
roof. I have the 13B2 only about two foot above the rotor. The rotor
does not have a brake in it and after a windy day the antenna will be
blown off course relative to the indicator on the rotor control box, but
that can be easily reset by turning the rotor control all the way to one
end of the dial and then back all the way to the other end allowing it to
get back on course. You should have no problem with the antenna you want
to use. Good luck.

From: asimonin@acca.NMSU.Edu (asimonin)
Subject: Yaesu Mobile Dual Banders

I am interested in comments about the various 2M/70CM Yaesu dual banders. Recently, someone in this news group seemed to have receiver ignition noise problems with the FT-8500 series when used in their Toyota truck. I have a Nissan which has noise problems on the standard AM band so this ignition noise issue could affect my mobile use. I have a FT-51R which picks us some noise when used in the Nissan. What are the differences between the FT-5200 series and FT-8500 radios? Comments are appreciated!

Thanks....

3785. Need manual and schematic for Johnson Viking II

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5lpkkg$g2h@sf18.dseg.ti.com>

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

Greetings, BA lovers!

I picked up a Johnson Viking II this weekend at the Fort Worth swap meet for the paltry sum of $25. It's all there and in restorable condition. What I didn't get was a manual and schematic. Anyone have a book on the Viking II that I can borrow and copy? I promise to treat it carefully and return it promptly, and I'll pay all of the postage costs both ways. I'd prefer to do the copying myself.

Thanks and 73!

Eric:

I have been running an RS35M since 1993.=20
I also bought mine with extra capacity in mind.
When you draw 35 amps, that does not mean that you are drawing that muc=
h on the=20
120 volt circuit that supplies it. I run my supply on a 15 amp circuit,=
with a=20
computer, and other things on the same circuit, and have never had any =
problems.

Astron makes some very nice power supplies.
You may want to take a look at their switching power supplies.
I bought one for my IC706. it is about the same size as the 706, and ve=
ry light=20
weight. It puts out 20 amp continuous, and 25 intermittant. I think the=

model #
is=20
SS25. there is also one that puts out more, 35amp intermittant, I think=
=2E
The 20 amp one was around $100-$125.
Apparently not too many people know about the switchers made by Astron =
yet. They
have=20
been out only a few months, I believe.

Bought mine at Amateur Electronic Supply.

>and a much sought after certification in the private/commercial world.=

Big difference -- Mil Spec is a standard set by others, ISO900x is a
certification based on a self-imposed standard, the standard itself
not being an item on which judgement is passed.

What's the difference you ask?

ISO900x means that there is some quality control procedures in place
and they are being followed by the manufacturer. The designation,
much as the manfacturer's would like for you to believe otherwise,
does not mean superior or better quality -- only that a quality
system is in place and is being followed. It may be poor quality
control, but if they have quality control and it is being followed,
they can recieve the ISO designations.

Much the same way with hospital accreditations (my area of
expertise) -- the Joint Commission for the Accreditation of
Healthcare Organizations doesn't assess the *success* of the
policies, nor the *quality* of the policies -- just their existence
and documentation that they are being followed.

Hello,

I'm not yet licenced, and hence not even new to the world of Amateur
Radio. I do intend to be, however, and would like some information on
what equipment you recommend and (importantly) why you recommend it.
Cost (ukp) and availability would also help, if possible.

Searching magazines for adverts is not quite the same as hearing users'
views.

I will understand electronic terms but probably not radio 'slang'.

Thanks for your time and help.

snip!

I called Heath Co. in 1995 (got their # through directory assistance)
and obtained photocopies of origional manuals. They ran about $25 a
piece! The invoice does not have a telephone number but the adr is

HEATH REPLACEMENT PARTS
455 RIVERVIEW DRIVE
BENTON HARBOR, MI 49022

The manuals I bought from them had a 1963 copyright date.

Steve, N4EY

3792. What do you'll think about the Kenwood TM-261A?

Source record: 175040

Hi!

I'm looking to buy my first Ham Radio. I was wondering if any of you can offer any advise. I was thinking about a Kenwood TM-261A. Is this a good starter? Is $269.95 a good price?

Thanks,

Nathan Price
nate@neosoft.com

3793. Heath manuals

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: Steve <semann@nr.infi.net>
Message-ID: <3380DA7C.4D83@nr.infi.net>
Source record: 175041

Manuals may still be available from Heath. I purchased two photocopies
of manuals from them in Oct. '95 after tracking them down through
directory asistance. The address on my invoice is
HEATH REPLACEMENT PARTS
455 RIVERVIEW DRIVE
BENTON HARBOR, MI 49022.
Sorry, but the phone number is not listed on the invoice. The copies
cost me about $25 each and were for manuals copyrighted 1963.

3800. Re: Simplex Phone Patch???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: kc4srn@aol.com
Message-ID: <19970519060101.CAA11482@ladder02.news.aol.com>
Source record: 175074

Simplex patches can go as far as you can. Plus certain ones can be "attached to a repeter" just by tuning it in. Sound quality is perfect. Just like a repeter located. auto-patch. I have the CS-900 for sale. Best thing is, you are in control of the patch and it's use. It's between you and the FCC. It's also much more private because you can tune it to any frequency you prefer and change it often. Here's my ad.

The one I have for sale is the best thing going. Not because I have it for sale, but that is the truth. CSI makes the patch you want because it covers all the things you will run into. The CS-900 is a VOX Simplex patch. But, that doesn't mean it can't work with/on a (duplex) Repeater. See the following.
